

iCrash :
A Crisis Management Case Study
MESSIR Analysis Document
- v 1.4 -

(Report type: Simulation)

Wednesday 10th February, 2016 - 17:39

Contents

1	Introduction	15
1.1	Overview	15
1.2	Purpose and recipients of the document	15
1.3	Application Domain	15
1.4	Definitions, acronyms and abbreviations	15
1.5	Document structure	16
2	General Description	17
2.1	Domain Stakeholders	17
2.1.1	Communication Company	17
2.1.2	Humans	18
2.1.3	Coordinators	18
2.1.4	Administrator	18
2.1.5	Creator	19
2.1.6	Activator	19
2.2	System's Actors	20
2.3	Use Cases Model	20
2.3.1	Use Cases	20
2.3.2	Use Case Instance(s)	31
3	Environment Model	35
3.1	Local view 01	35
3.2	Local view 02	35
3.3	Local view 03	35
3.4	Local view 04	35
3.5	Local view 05	35
3.6	Global view 01	35
3.7	Actors and Interfaces Descriptions	39
3.7.1	actActivator Actor	39
3.7.2	actAdministrator Actor	39
3.7.3	actAuthenticated Actor	40
3.7.4	actComCompany Actor	40
3.7.5	actCoordinator Actor	41
3.7.6	actMsrCreator Actor	41
4	Concept Model	43
4.1	PrimaryTypes-Classes	43
4.1.1	Local view 01	43
4.1.2	Local view 02	43
4.1.3	Local view 03	43

4.1.4	Local view 04	43
4.1.5	Global view 01	43
4.2	PrimaryTypes-Datatypes	43
4.2.1	Local view 06	43
4.2.2	Global view 01	48
4.3	SecondaryTypes-Datatypes	48
4.3.1	Local view 01	48
4.4	Concept Model Types Descriptions	48
4.4.1	Primary types - Class types descriptions	48
4.4.2	Primary types - Datatypes types descriptions	51
4.4.3	Primary types - Association types descriptions	52
4.4.4	Primary types - Aggregation types descriptions	53
4.4.5	Secondary types - Class types descriptions	53
4.4.6	Secondary types - Datatypes types descriptions	53
4.4.7	Secondary types - Association types descriptions	53
4.4.8	Secondary types - Aggregation types descriptions	53
4.4.9	Secondary types - Composition types descriptions	53
5	Operation Model	55
5.1	Environment - Out Interface Operation Scheme for actActivator	55
5.1.1	Operation Model for oeSetClock	55
5.1.2	Operation Model for oeSollicitateCrisisHandling	57
5.2	Environment - Out Interface Operation Scheme for actAdministrator	61
5.2.1	Operation Model for oeAddCoordinator	61
5.2.2	Operation Model for oeDeleteCoordinator	64
5.3	Environment - Out Interface Operation Scheme for actAuthenticated	66
5.3.1	Operation Model for oeLogin	66
5.3.2	Operation Model for oeLogout	70
5.4	Environment - Out Interface Operation Scheme for actComCompany	72
5.4.1	Operation Model for oeAlert	72
5.5	Environment - Out Interface Operation Scheme for actCoordinator	78
5.5.1	Operation Model for oeCloseCrisis	78
5.5.2	Operation Model for oeGetAlertsSet	83
5.5.3	Operation Model for oeGetCrisisSet	84
5.5.4	Operation Model for oeInvalidateAlert	86
5.5.5	Operation Model for oeReportOnCrisis	88
5.5.6	Operation Model for oeSetCrisisHandler	90
5.5.7	Operation Model for oeSetCrisisStatus	93
5.5.8	Operation Model for oeSetCrisisType	95
5.5.9	Operation Model for oeValidateAlert	97
5.6	Environment - Out Interface Operation Scheme for actMsrCreator	99
5.6.1	Operation Model for oeCreateSystemAndEnvironment	99
5.7	Environment - Actor Operation Scheme for actMsrCreator	104
5.7.1	Operation Model for init	104
5.8	Primary Types - Operation Schemes for Class ctAdministrator	104
5.8.1	Operation Model for init	104
5.9	Primary Types - Operation Schemes for Class ctAlert	105
5.9.1	Operation Model for init	105
5.9.2	Operation Model for isSentToCoordinator	107

5.10	Primary Types - Operation Schemes for Class ctAuthenticated	108
5.10.1	Operation Model for init	108
5.11	Primary Types - Operation Schemes for Class ctCoordinator	108
5.11.1	Operation Model for init	108
5.12	Primary Types - Operation Schemes for Class ctCrisis	110
5.12.1	Operation Model for init	110
5.12.2	Operation Model for handlingDelayPassed	111
5.12.3	Operation Model for maxHandlingDelayPassed	113
5.12.4	Operation Model for isSentToCoordinator	114
5.12.5	Operation Model for isAllocatedIfPossible	115
5.13	Primary Types - Operation Schemes for Class ctHuman	117
5.13.1	Operation Model for init	117
5.13.2	Operation Model for isAcknowledged	118
5.14	Primary Types - Operation Schemes for Class ctState	119
5.14.1	Operation Model for init	119
5.15	Primary Types - Operation Schemes for Datatype dtAlertID	121
5.15.1	Operation Model for is	121
5.16	Primary Types - Operation Schemes for Datatype dtComment	122
5.16.1	Operation Model for is	122
5.17	Primary Types - Operation Schemes for Datatype dtCoordinatorID	124
5.17.1	Operation Model for is	124
5.18	Primary Types - Operation Schemes for Datatype dtCrisisID	125
5.18.1	Operation Model for is	125
5.19	Primary Types - Operation Schemes for Datatype dtGPSLocation	126
5.19.1	Operation Model for is	126
5.19.2	Operation Model for isNearTo	127
5.20	Primary Types - Operation Schemes for Datatype dtLatitude	129
5.20.1	Operation Model for is	129
5.21	Primary Types - Operation Schemes for Datatype dtLogin	130
5.21.1	Operation Model for is	130
5.22	Primary Types - Operation Schemes for Datatype dtLongitude	131
5.22.1	Operation Model for is	131
5.23	Primary Types - Operation Schemes for Datatype dtPassword	132
5.23.1	Operation Model for is	132
5.24	Primary Types - Operation Schemes for Datatype dtPhoneNumber	134
5.24.1	Operation Model for is	134
5.25	Primary Types - Operation Schemes for Enumeration etAlertStatus	135
5.25.1	Operation Model for is	135
5.26	Primary Types - Operation Schemes for Enumeration etCrisisStatus	136
5.26.1	Operation Model for is	136
5.27	Primary Types - Operation Schemes for Enumeration etCrisisType	137
5.27.1	Operation Model for is	137
5.28	Primary Types - Operation Schemes for Enumeration etHumanKind	138
5.28.1	Operation Model for is	138
5.29	Secondary Types - Operation Schemes for Classes	139
5.30	Secondary Types - Operation Schemes for Datatype dtSMS	139
5.30.1	Operation Model for is	139
5.31	Secondary Types - Operation Schemes for Enumerations	140

6 Test Model(s)	141
6.1 Test Model for testcase01	141
6.1.1 Test Steps Specification	141
6.1.2 Test Case Instance - instance01	163
6.1.3 Test Case Instance - instance01Part01	163
6.1.4 Test Case Instance - instance01Part02	165
7 Additional Constraints	167
7.1 Quality Constraints	167
7.1.1 Functional suitability	167
7.1.2 Performance efficiency	167
7.1.3 Compatibility	168
7.1.4 Usability	168
7.1.5 Reliability	169
7.1.6 Security	170
7.1.7 Maintainability	170
7.1.8 Portability	171
7.2 Other Constraints	172
A Undocumented Messir Specification Elements	173
A.1 Undocumented Use Case Instances	173
A.1.1 Undocumented Use Case Instances - User-Goal Level	173
A.1.2 Undocumented Use Case Instance Views	173
A.2 Undocumented Concept Model Views	173
A.3 Undocumented Test-Case Instance Specifications	173

Chapter 1

Introduction

1.1 Overview

iCrash is a simple system dedicated to any person who wants to inform of a car crash crisis situation in order to allow for crisis handling. At anytime and anywhere, anyone can be the witness or victim of a car crash and might be in a situation allowing for alerting this crisis. The *iCrash* system has for objectives to support crisis declaration and secure administration and crisis handling by the *iCrash* professional users.

1.2 Purpose and recipients of the document

This document is an analysis document complying with the **Messip** methodology [?]. Its intent is to provide an example of a precise specification of the functional properties of the *iCrash* system.

The recipients of this document are:

- the *iCrash* system's buyer company (ABC): this document is used as a contractual document jointly with any other document considered as useful (as requirement elicitation document, ...) in order to have a higher degree of precision in requirement description. It is also used as a basis document for the *iCrash* system validation using specification based testing.
- the *iCrash* system development company (ADC) is expected to use this document as the basis for development (mainly design, implementation, maintenance). It is also used for verification and validation using test plans defined using the analysis models described in this document and according to the **Messip** methodology.

1.3 Application Domain

The *iCrash* system belongs to the Crisis Management Systems Domain. It is a system dedicated to crisis professional and non professional end users. It has to be considered as an autonomous and external service for the society. It is not an institutional system certified and guaranteed by any governmental entity and thus, must be used with caution.

1.4 Definitions, acronyms and abbreviations

N.A.

1.5 Document structure

The document structure is designed to be coherent with the **Messip** methodology [?]. Section 2 provides a general description of the system purpose, its users, its environment and some general non functional requirements. A more detailed description of the non functional requirements, if any, are provided in section ?. The **system operation** triggered by events sent by the external **actors** belonging to the environment are described in Section 3. The *iCrash* concepts used to represent the any persistent or transient information is given in Section 4. The precise specification of the system operations in term of system's state changes, events sent together with the constraints on the allowed sequences of system operations are described in Section 5.

Chapter 2

General Description

In the context of the **Messip** method, the information provided in this section is intended to present the system for which the **Messip** analysis is provided. The content of this section is made accordingly to the requirements elicitation document that might have been done during the project but also adapted coherently in order to be an abstract introduction to the **Messip** analysis.

2.1 Domain Stakeholders

All stakeholders of the system are detailed in this section. After a brief description of a stakeholder, its objectives are first stated. Thereafter, the responsibilities of the stakeholder are detailed which help to achieve the stakeholder objectives to a certain degree. While the objectives characterize the general problems addressed by the *iCrash* system, the responsibilities describe concrete actions that are expected from a stakeholder. Some of these responsibilities can be traced looking at the use case described in Section B.1, and hence must be supported by the *iCrash* system. All stakeholders listed in this section have an interest in the system or are affected by the system in some way, but only a subset of the stakeholders are directly involved in the use cases described. Let us remind that use case diagrams or descriptions are not **Messip** analysis phase mandatory outputs. They are proposed as informal means to help understanding the semantics of the system specification made of the mandatory analysis models, which provide a complete executable specification.

2.1.1 Communication Company

A Communication Company is a company that has the capacity to ensure communication of information between its customers and the *iCrash* system. The objectives of a Communication Company are:

- to be able to deliver any SMS sent by any human to the *iCrash* 's phone number.
- to be able to transmit SMS messages from the ABC company that owns the *iCrash* system to any human having an SMS compatible device accessible using a phone number.

In order to achieve these objectives, the responsibilities of a Communication Company are:

- ensure confidentiality and integrity of the information sent by a human to the *iCrash* system or from the system to a human.
- to be always available and reliable.

2.1.2 Humans

A human is any person who considers himself related to a car crash either as a witness, a victim or an anonymous person. The objectives of a human are:

- inform the *iCrash* system about the crisis situation he detected.
- be sure that the ABC company has been informed about the situation.
- to be informed about the situation of the crisis he is related to as a victim or witness.

In order to achieve these objectives, the responsibilities of a human are:

- to provide as much details as possible concerning the crisis to the ABC company.
- to declare a crisis only if the crisis is real.
- to have access to the SMS compatible communication device he used to communicate with the *iCrash* system.

2.1.3 Coordinators

A coordinator is an employee of the ABC company being responsible of handling one or several crises. The objectives of a coordinator are:

- to securely monitor the existing alerts and crisis.
- to securely manage alerts and crisis until their termination.

In order to achieve these objectives, the responsibilities of a coordinator are:

- to be capable to determine how an alert received should be considered.
- to be available to react to requests to handle alerts and crisis.
- to be autonomous in handling crisis and to report on its handling.
- to be able to decide when a crisis or an alert can be closed.
- to know its system identification information for secure usage of the system.

2.1.4 Administrator

An administrator is an employee of the ABC company being responsible of administrating the *iCrash* system. The objectives of an administrator are:

- to add or delete coordinator actors from the system and its environment.

In order to achieve these objectives, the responsibilities of a coordinator are:

- know the company employees that can be coordinators and that have access to the system.
- to know its system identification information for secure usage of the system.
- to know the security policy of the ABC company.
- to communicate the coordinators their identification information for secure system usage.

2.1.5 Creator

Any system has a `Creator` stakeholder which is a technician who is installing the *iCrash* system on the targeted deployment infrastructure.

The objectives of a `Creator` are:

- to install the *iCrash* system
- to define the values for the initial system's state
- to define the values for the initial system's environment
- to ensure the integration of the *iCrash* system with its initial environment

In order to achieve these objectives, the responsibilities of a `Creator` are:

- provide the necessary data to the *iCrash* system for its initialization.

2.1.6 Activator

An `activator` is a logical representation of the active part the *iCrash* system. It represents an implicit stakeholder belonging to the system's environment that interacts with the *iCrash* system autonomously without the need of a external entity. It is usually used for representing time triggered functionalities.

The objectives of a `activator` are:

- to communicate the current time to the system
- to notify the administrator that some crisis are still pending for a too long time.

In order to achieve these objectives, the responsibilities of a `activator` are:

- to know the current universal time
- to send the messages to the system according to the time constraints specifically defined for it.

2.2 System's Actors

The objective of this section is not to provide the full requirement elicitation document in this section but to reuse a part of this document to provide a informal introduction to the **Messir** specification of the system under development. The use case model is made of a use case diagrams modelling abstractly and informally the actors and their use cases together with a set of use cases descriptions. In addition, those diagrams and description tables are adapted to the **Messir** specification since actor and messages names together with parameters are partly adapted to be consistent with the specification identifiers (see [?] for more details).

Among all the stakeholders presented in the previous section, we can determine five types of direct actors¹:

- actComCompany: for the Communication Company stakeholder.
- actAdministrator: for the Administrator stakeholder.
- actCoordinator: for the Coordinators stakeholders.
- actActivator: for the Activator stakeholder.
- actMsrCreator: for the Creator stakeholder.

In addition to those system actors, we can add five other types of actors related to the system's ones. Those five actors are grouped into two categories:

- *Indirect actors*
 - Witness: for any human that is a witness of a car crash
 - Victim: for any human that is a victim of a car crash
 - Anonymous: for any human that want to inform about a car crash while staying anonymous.
- *Abstract actors*
 - actHuman: represent abstractly any kind of human being actor wanting to communicate with the ABC system in the context of a car crash.
 - actAuthenticated: for the logical Activator stakeholder.

2.3 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the **Messir** method and inspired by the standard Cokburn template [?].

2.3.1 Use Cases

2.3.1.1 summary-suDeployAndRun

The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.

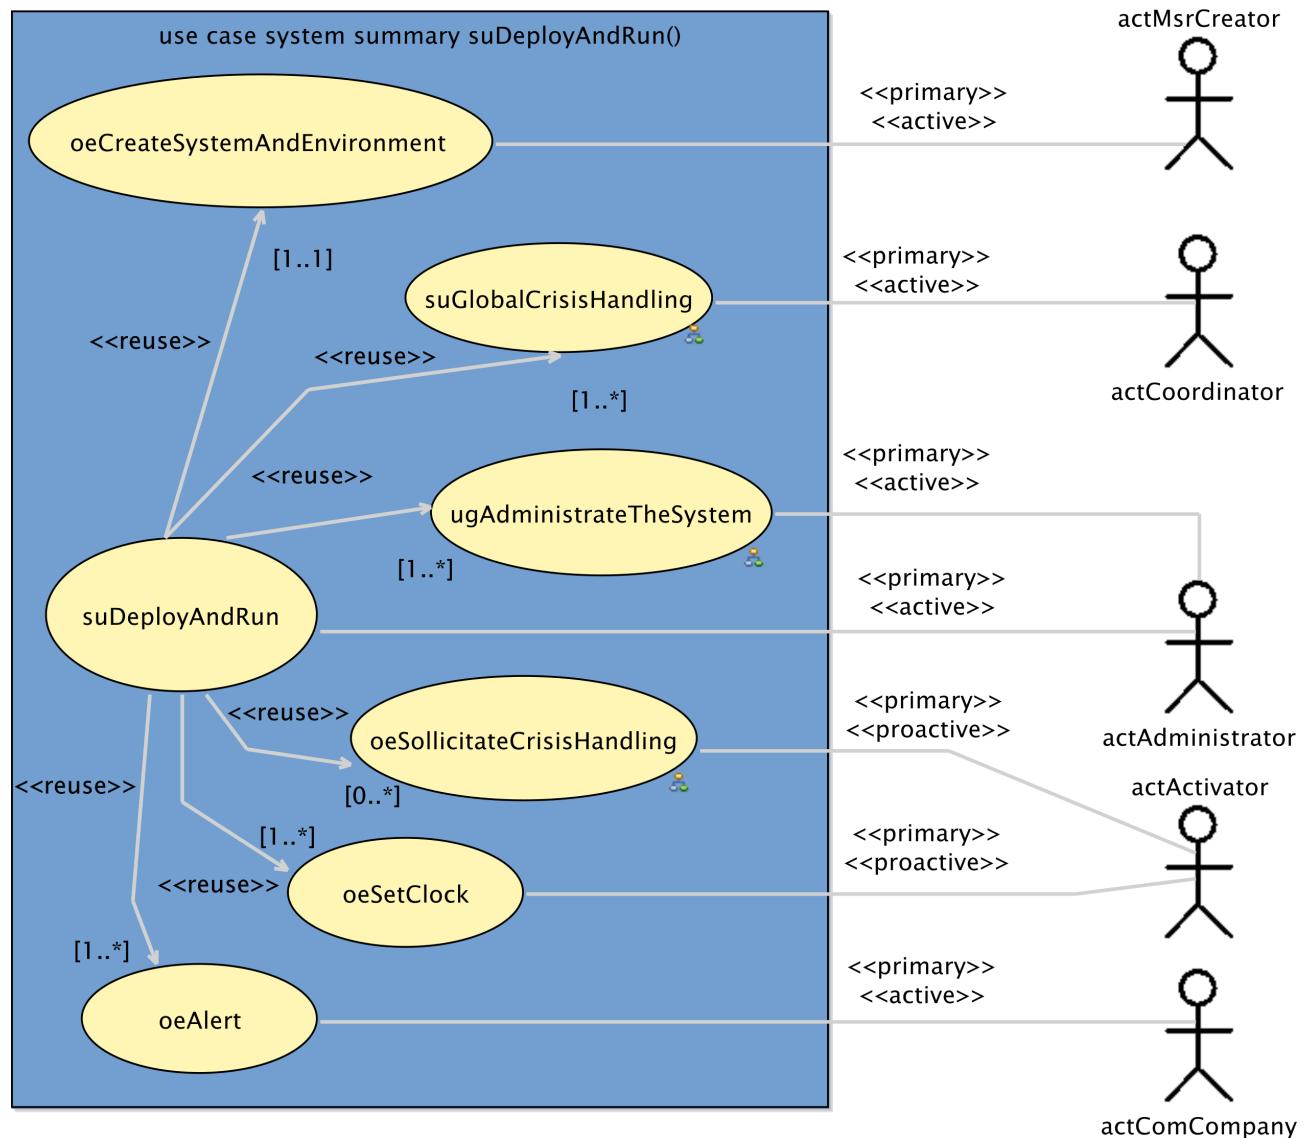

¹The naming conventions in **Messir** propose to start each type name by lowercase letters indicating the meta model type used (i.e. act for actors, ct for class type,). In addition to ease the reading it makes the translational semantics into Prolog code more straightforward.

USE-CASE DESCRIPTION	
<i>Name</i>	suDeployAndRun
<i>Scope</i>	system
<i>Level</i>	summary
Primary actor(s)	
1	actAdministrator [active]
Secondary actor(s)	
1	actMsrCreator [active]
2	actCoordinator [active, multiple]
3	actActivator [proactive]
4	actComCompany [active]
Goal(s) description	
The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.	
Reuse	
1	<u>oeCreateSystemAndEnvironment [1..1]</u>
2	<u>ugAdministrateTheSystem [1..*]</u>
3	<u>suGlobalCrisisHandling [1..*]</u>
4	<u>oeSetClock [1..*]</u>
5	<u>oeSollicitateCrisisHandling [0..*]</u>
6	<u>oeAlert [1..*]</u>
Protocol condition(s)	
1	the iCrash system has never been deployed and used
Pre-condition(s)	
1	none
Main post-condition(s)	
1	the iCrash system has been created and has handled the crisis situations for which it received alerts through the communication company.
Main Steps	
a	the actor actMsrCreator executes the <u>oeCreateSystemAndEnvironment</u> use case
b	the actor actAdministrator executes the <u>ugAdministrateTheSystem</u> use case
c	the actor actComCompany executes the <u>oeAlert</u> use case
d	the actor actActivator executes the <u>oeSetClock</u> use case
e	the actor actActivator executes the <u>oeSollicitateCrisisHandling</u> use case
f	the actor actCoordinator executes the <u>suGlobalCrisisHandling</u> use case
Steps Ordering Constraints	
1	step (a) must be always the first step.
2	step (f) can be executed by different actCoordinator actors.
3	if (e) then previously (d).

Figure 2.1 shows the use case diagram for the suDeployAndRun summary use case

2.3.1.2 summary-suGlobalCrisisHandling

the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.

Figure 2.1: `suDeployAndRun` summary use case

USE-CASE DESCRIPTION	
<i>Name</i>	suGlobalCrisisHandling
<i>Scope</i>	system
<i>Level</i>	summary
Primary actor(s)	
1	actCoordinator [active]
Goal(s) description	
the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.	
Reuse	
1	ugSecurelyUseSystem [1..*]
2	ugMonitor [1..*]
3	ugManageCrisis [1..*]
Protocol condition(s)	
1	the iCrash system has been deployed
2	the coordinator actor involved in the use case has been declared by the actor actAdministrator
Pre-condition(s)	
1	none
Main post-condition(s)	
1	modifications have been made by the coordinator on existing alerts or crisis OR the coordinator requested an updated status on existing alerts or crisis.
Main Steps	
a	the actor actCoordinator executes the ugSecurelyUseSystem use case
b	the actor actCoordinator executes the ugMonitor use case
c	the actor actCoordinator executes the ugManageCrisis use case
Steps Ordering Constraints	
1	steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)).
2	steps (a) (b) and (c) can be executed multiple times.

Figure 2.2 shows the use case diagram for the suGlobalCrisisHandling user goal use case

2.3.1.3 usergoal-ugAdministateTheSystem

the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

USE-CASE DESCRIPTION	
<i>Name</i>	ugAdministateTheSystem
<i>Scope</i>	system
<i>Level</i>	usergoal
Primary actor(s)	
1	actAdministrator [active]
Goal(s) description	
the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

... Use-Case Description table continuation

Reuse
1 <u>ugSecurelyUseSystem [1..*]</u>
2 <u>oeAddCoordinator [1..*]</u>
3 <u>oeDeleteCoordinator [0..*]</u>
Protocol condition(s)
1 the iCrash system has been deployed
Pre-condition(s)
1 none
Main post-condition(s)
1 modifications have been made to the system and its environment concerning existing or new coordinators.
Main Steps
a the actor <code>actAdministrator</code> executes the <u>ugSecurelyUseSystem</u> use case
b the actor <code>actAdministrator</code> executes the <u>oeAddCoordinator</u> use case
c the actor <code>actAdministrator</code> executes the <u>oeDeleteCoordinator</u> use case
Steps Ordering Constraints
1 steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)).
2 steps (a) (b) and (c) can be executed multiple times.

Figure 2.3 shows the use case diagram for the ugAdministrateTheSystem user goal use case

2.3.1.4 usergoal-ugManageCrisis

The goal is to do an action that makes the handling of a crisis or an alert progress.

USE-CASE DESCRIPTION	
<i>Name</i>	ugManageCrisis
<i>Scope</i>	system
<i>Level</i>	usergoal
Primary actor(s)	
1	<code>actCoordinator[active]</code>
Goal(s) description	
The goal is to do an action that makes the handling of a crisis or an alert progress.	
Reuse	
1	<u>oeValidateAlert [0..*]</u>
2	<u>oeSetCrisisStatus [0..*]</u>
3	<u>oeSetCrisisHandler [0..*]</u>
4	<u>oeReportOnCrisis [0..*]</u>
5	<u>oeCloseCrisis [0..*]</u>
6	<u>oeInvalidateAlert [0..*]</u>
Protocol condition(s)	
1	the iCrash system has been deployed
Pre-condition(s)	
1	none
Main post-condition(s)	

continues in next page ...

... Use-Case Description table continuation

1	there exist one alert or one crisis whose related information has been changed.
Main Steps	
a	the actor actCoordinator executes the <u>oeValidateAlert</u> use case
b	the actor actCoordinator executes the <u>oeSetCrisisStatus</u> use case
c	the actor actCoordinator executes the <u>oeSetCrisisHandler</u> use case
d	the actor actCoordinator executes the <u>oeReportOnCrisis</u> use case
e	the actor actCoordinator executes the <u>oeCloseCrisis</u> use case
f	the actor actCoordinator executes the <u>oeInvalidateAlert</u> use case
Steps Ordering Constraints	
1	managing a crisis is doing one of the indicated use cases.

Figure 2.4 shows the use case diagram for the ugManageCrisis user goal use case

2.3.1.5 usergoal-ugMonitor

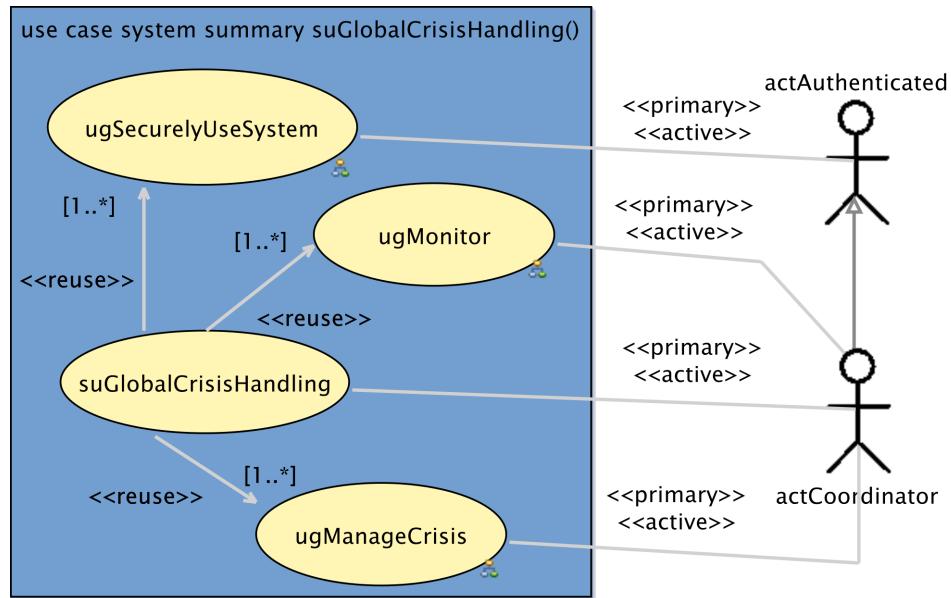

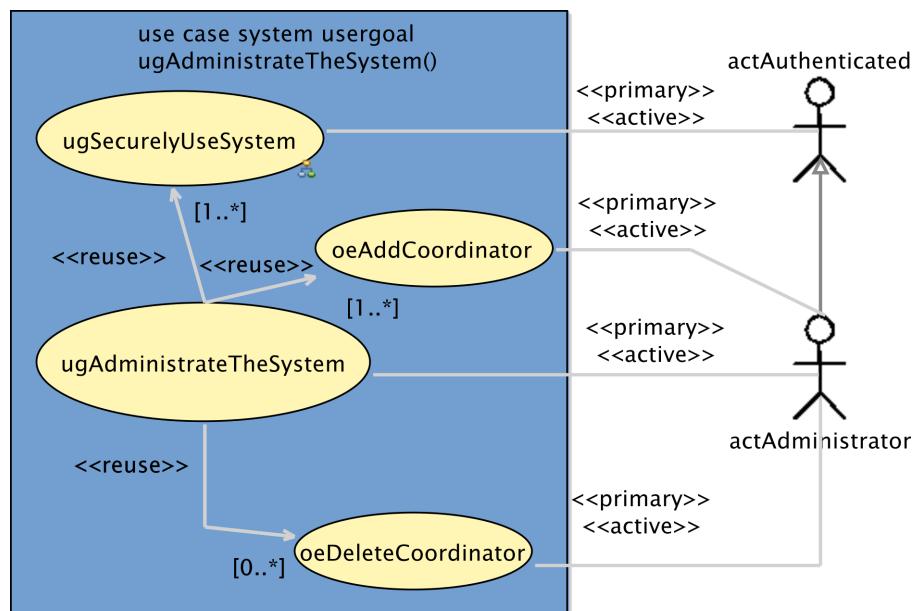

the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake.

USE-CASE DESCRIPTION	
Name	ugMonitor
Scope	system
Level	usergoal
Primary actor(s)	
1	actCoordinator[active]
Goal(s) description	
the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake.	
Reuse	
1	<u>oeGetCrisisSet</u> [0..*]
2	<u>oeGetAlertsSet</u> [0..*]

Figure 2.7 shows the use case diagram for the oeSetCrisisHandler subfunction use case

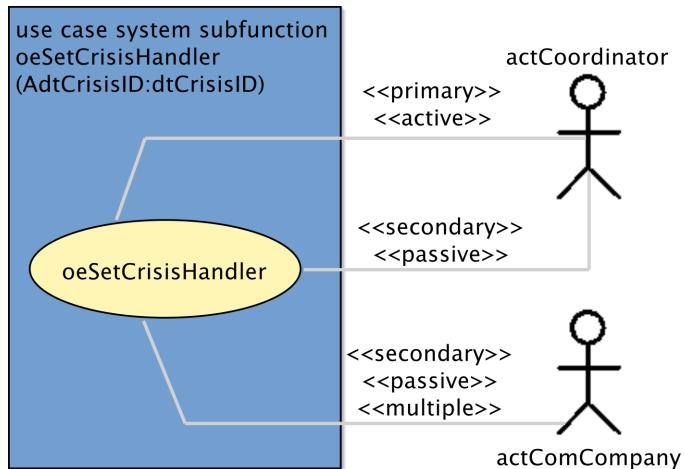

Figure 2.7: oeSetCrisisHandler subfunction use case

2.3.1.8 subfunction-oeSollicitateCrisisHandling

the actActivator's goal is to decrease the number of unhandled crisis.

USE-CASE DESCRIPTION	
Name	oeSollicitateCrisisHandling
Scope	system
Level	subfunction
<i>Primary actor(s)</i>	
1	actActivator [proactive]
<i>Secondary actor(s)</i>	
1	actCoordinator [passive, multiple]
2	actAdministrator [passive]
<i>Goal(s) description</i>	
the actActivator's goal is to decrease the number of unhandled crisis.	
<i>Protocol condition(s)</i>	
1	the iCrash system has been deployed.
2	there exist some crisis still pending and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.
<i>Pre-condition(s)</i>	
1	none
<i>Main post-condition(s)</i>	
1	a simple text message ieMessage('There are alerts not treated since more than the defined delay. Please REACT !') is sent to the system administrator and to all the coordinators of the environment for each crisis that is known to be not handled and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.)
2	the reminder period for the concerned crisis is initialized.

Figure 2.8 shows the use case diagram for the oeSollicitateCrisisHandling subfunction use case

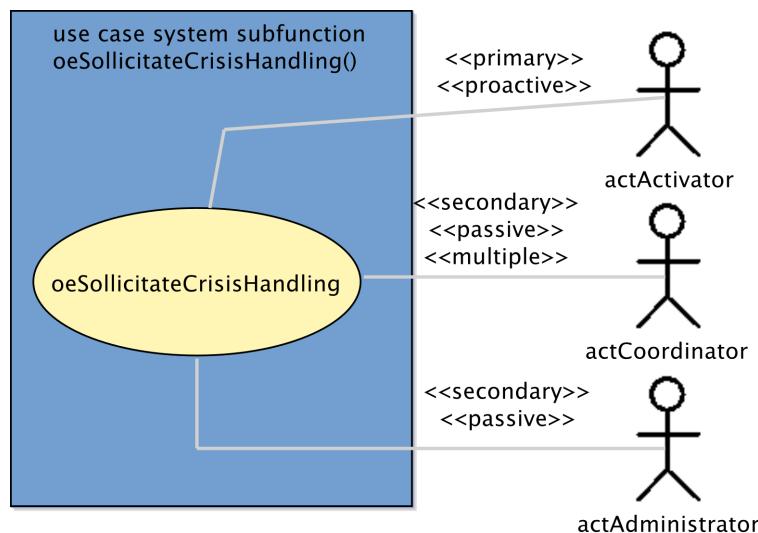

Figure 2.8: oeSollicitateCrisisHandling subfunction use case

2.3.2 Use Case Instance(s)

2.3.2.1 Use-Case Instance - uciSimpleAndCompletePart01:suDeployAndRun

First part of a use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
<i>Instantiated Use Case</i>	
<code>suDeployAndRun</code>	
<i>Instance ID</i>	
<code>uciSimpleAndCompletePart01</code>	
<i>Remarks</i>	
a	shows the system initialization and the first administrative tasks by the administrator.
b	The unique and always existing <code>actMsrCreator</code> actor instance (named here <code>theCreator</code>) requests the initialization of the system and its environment (made of one administrator identified here by <code>bill</code>), one activator actor (identified by <code>theClock</code>) and indicating that the number of communication company actor instances for the system's environment is 4 (one of them is identified here by <code>tango</code>)
c	the administrator logs in to initialize a coordinator
d	an alert is received. Time is going on without having the coordinator handling the alert which let's the proactive actor trigger the automatic sollicitation of crisis handling.
e	this first part stops before the coordinator logs in the system.

Figure 2.9 shows the sequence diagram representing the first part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

2.3.2.2 Use-Case Instance - uciSimpleAndCompletePart02:suDeployAndRun

Second part of a simple and complete use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
<i>Instantiated Use Case</i>	
<code>suDeployAndRun</code>	
<i>Instance ID</i>	
<code>uciSimpleAndCompletePart02</code>	
<i>Remarks</i>	
a	starts when the coordinator logs in the system until the full handling of all the existing crisis.
b	shows an instantiated case of handling of a crisis by a coordinator until its closure after reporting.

Figure 2.10 shows the sequence diagram representing the second part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

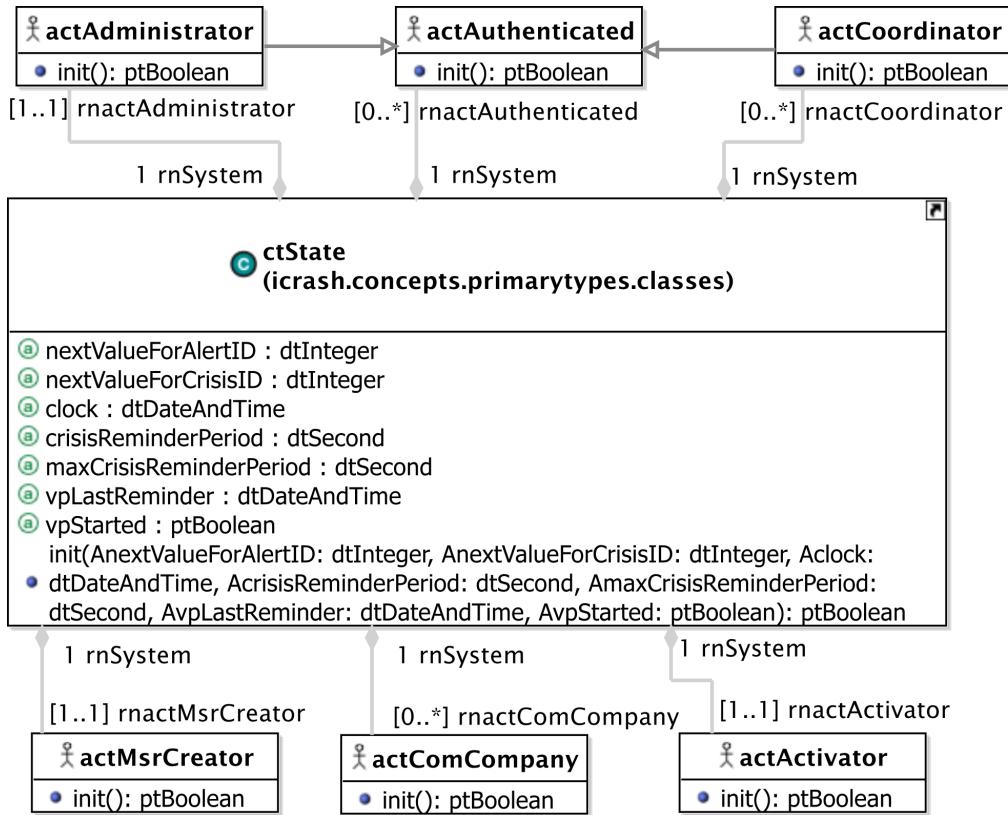

Figure 3.6: Environment Model - Global View 01. em-gv-01 environment model global view.

3.7 Actors and Interfaces Descriptions

We provide for the given views the description of the actors together with their associated input and output interface descriptions.

3.7.1 **actActivator** Actor

ACTOR
actActivator
represents a logical actor for time automatic message sending based on system's or environment status.
OutputInterfaces
OUT 1 [proactive] oeSollicitateCrisisHandling () :ptBoolean used to avoid crisis to stay too long in an not handled status. OUT 2 [proactive] oeSetClock (AcurrentClock:dtDateAndTime) :ptBoolean used to update the system's time

3.7.2 **actAdministrator** Actor

ACTOR	
<i>actAdministrator</i>	represents an actor responsible of administration tasks for the <i>iCrash</i> system.
<i>Extends</i>	<i>icrash.environment.actAuthenticated</i>
<i>OutputInterfaces</i>	
OUT 1	oeAddCoordinator (AdtCoordinatorID:dtCoordinatorID, AdtLogin:dtLogin, AdtPassword:dtPassword) :ptBoolean sent to add a new coordinator in the system's post state and environment's post state.
OUT 2	oeDeleteCoordinator (AdtCoordinatorID:dtCoordinatorID) :ptBoolean sent to delete an existing coordinator in the system's post state and environment's post state.
<i>InputInterfaces</i>	
IN 1	ieCoordinatorAdded() :ptBoolean its reception confirms the creation of the requested coordinator.
IN 2	ieCoordinatorDeleted() :ptBoolean its reception confirms the deletion of the requested coordinator.

3.7.3 **actAuthenticated** Actor

ACTOR	
<i>actAuthenticated</i>	abstract actor providing reusable input and output interfaces for actors that need to authenticate themselves.
<i>OutputInterfaces</i>	
OUT 1	oeLogin (AdtLogin:dtLogin, AdtPassword:dtPassword) :ptBoolean sent to request authorization to request access secured system operations.
OUT 2	oeLogout () :ptBoolean sent to end the secured access to specific system operations.
<i>InputInterfaces</i>	
IN 1	ieMessage (AMessage:ptString) :ptBoolean allows for receiving general textual messages.

3.7.4 **actComCompany** Actor

ACTOR	
<i>actComCompany</i>	represents the communication company stakeholder ensuring the input/ouput of textual messages with humans having communicaiton devices.
<i>OutputInterfaces</i>	
OUT 1	oeAlert (AetHumanKind:etHumanKind, AdtDate:dtDate, AdtTime:dtTime, AdtPhoneNumber:dtPhoneNumber, AdtGPSLocation:dtGPSLocation, AdtComment:dtComment) :ptBoolean sent to alert of a potential crisis situation.
<i>InputInterfaces</i>	
IN 1	ieSmsSend (AdtPhoneNumber:dtPhoneNumber, AdtSMS:dtSMS) :ptBoolean <i>continues in next page ...</i>

...Actor table continuation

allows for receiving textual messages to be dispatched to the communication company customers having the provided phone number.

3.7.5 actCoordinator Actor

ACTOR	
<i>actCoordinator</i>	
represents actor responsible of handling one or several crisis for the <i>iCrash</i> system.	
<i>Extends</i>	
icrash.environment.actAuthenticated	
<i>OutputInterfaces</i>	
OUT 1	oeInvalidateAlert (AdtAlertID:dtAlertID) :ptBoolean sent to indicate that an alert should be considered as closed.
OUT 2	oeCloseCrisis (AdtCrisisID:dtCrisisID) :ptBoolean sent to indicate that a crisis should be considered as closed.
OUT 3	oeGetAlertsSet (AetAlertStatus:etAlertStatus) :ptBoolean sent to request all the ctAlert instances having a specific status.
OUT 4	oeGetCrisisSet (AetCrisisStatus:etCrisisStatus) :ptBoolean sent to request all the ctCrisis instances having a specific status.
OUT 5	oeSetCrisisHandler (AdtCrisisID:dtCrisisID) :ptBoolean sent to declare himself as been the handler of a crisis having the specified id.
OUT 6	oeReportOnCrisis (AdtCrisisID:dtCrisisID, AdtComment:dtComment) :ptBoolean sent to update the textual information available for a specific handled crisis.
OUT 7	oeSetCrisisStatus (AdtCrisisID:dtCrisisID, AetCrisisStatus:etCrisisStatus) :ptBoolean sent to define the handling status of a specific crisis.
OUT 8	oeSetCrisisType (AdtCrisisID:dtCrisisID, AetCrisisType:etCrisisType) :ptBoolean sent to define the gravity type of a specific crisis.
OUT 9	oeValidateAlert (AdtAlertID:dtAlertID) :ptBoolean sent to indicate that a specific alert is not a fake.
<i>InputInterfaces</i>	
IN 1	ieSendAnAlert (ActAlert:ctAlert) :ptBoolean allows for receiving a requested ctAlert instance.
IN 2	ieSendACrisis (ActCrisis:ctCrisis) :ptBoolean allows for receiving a requested ctCrisis instance.

3.7.6 actMsrCreator Actor

ACTOR	
<i>actMsrCreator</i>	
Represents the creator stakeholder in charge of state and environment initialization.	
<i>OutputInterfaces</i>	
OUT 1	oeCreateSystemAndEnvironment (AqtyComCompanies:ptInteger) :ptBoolean sent to request the initialization of the system's class instances and the environment actors instances.

4.4 Concept Model Types Descriptions

This section provides the textual descriptions of all the types defined in the concept model and that can be part of the graphical views provided.

4.4.1 Primary types - Class types descriptions

The table below is providing comments on the graphical views given for the class types of the primary types. Type logical operations are precisely specified in the operation model.

CLASSES	
<i>ctAdministrator</i>	
used to characterize internally the entity that is responsible of administrating the <i>iCrash</i> system.	
<i>extends</i>	icrash.concepts.primarytypes.classes.ctAuthenticated
operation	init (Alogin:dtLogin, Apwd:dtPassword) :ptBoolean
	used to initialize the current object as a new instance of the ctAdministrator type.
<i>ctAlert</i>	
Used to model crisis alerts sent by any human having communication capability using communication companies belonging to the system's environment	
attribute	comment: dtComment
	a textual description providing unstructured information on the alert.
attribute	id: dtAlertID
	the alert unique identification information.
attribute	instant: dtDateAndTime
	the date and time at which the alert notification has been sent.
attribute	location: dtGPSLocation

continues in next page ...

... Classes table continuation

attribute	status: etAlertStatus the alert validation status
operation	init(Aid:dtAlertID, Astatus:etAlertStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment) :ptBoolean used to initialize the current object as a new instance of the ctAlert type.
operation	isSentToCoordinator(AactCoordinator:actCoordinator) :ptBoolean used to provide a given coordinator with current alert information.
ctAuthenticated	
used to model system's representation about actors that need to authenticate to access some specific functionalities.	
attribute	login: dtLogin an identifier for authentication.
attribute	pwd: dtPassword a key for authentication.
attribute	vpIsLogged: ptBoolean used to determine the access status.
operation	init(Alogin:dtLogin, Apwd:dtPassword) :ptBoolean used to initialize the current object as a new instance of the ctAuthenticated type.
ctCoordinator	
used to model system's representation about the actors that have the responsibility to handle alerts and crisis.	
extends	icrash.concepts.primarytypes.classes.ctAuthenticated
attribute	id: dtCoordinatorID a unique identification information.
operation	init(Aid:dtCoordinatorID, Alogin:dtLogin, Apwd:dtPassword) :ptBoolean used to initialize the current object as a new instance of the ctCoordinator type.
ctCrisis	
Used to model crisis that are inferred from the reception of at least one alert message. Crisis are entities that are handled by the <i>iCrash</i> system.	
attribute	comment: dtComment a textual description providing unstructured information on the crisis handling.
attribute	id: dtCrisisID the crisis unique identification information.
attribute	instant: dtDateAndTime the date and time at which the first related alert notification has been sent.
attribute	location: dtGPSLocation the position of the crisis equal to the one of the first alert received and associated to the crisis.
attribute	status: etCrisisStatus the crisis handling status.
attribute	type: etCrisisType an indication of the gravity of the crisis.
operation	handlingDelayPassed() :ptBoolean

continues in next page ...

... Classes table continuation

operation	used to determine if the crisis stood too longly in a pending status since last reminder. init (Aid:dtCrisisID, Atype:etCrisisType, Astatus:etCrisisStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment) :ptBoolean
operation	used to initialize the current object as a new instance of the ctAlert type. isAllocatedIfPossible () :ptBoolean
operation	used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled.
operation	used to provide a given coordinator with current crisis information. isSentToCoordinator (AactCoordinator:actCoordinator) :ptBoolean
operation	used to determine if the crisis stood too longly in a pending status since its creation. maxHandlingDelayPassed () :ptBoolean
ctHuman	
	used to model system's representation about the indirect actors that has alerted of potential crisis.
attribute	id: dtPhoneNumber the number of the communication device used to send an alert to <i>iCrash</i> system.
attribute	kind: etHumanKind
	role with respect to the alert notified.
operation	init (Aid:dtPhoneNumber, Akind:etHumanKind) :ptBoolean init: used to initialize the current object as a new instance of the ctHuman type.
ctState	
	used to model the system. Each system specified using Messip must include a ctState class for which there is only one instance at any state of the abstract machine after creation.
attribute	clock: dtDateAndTime used to represent the system local time.
attribute	crisisReminderPeriod: dtSecond used to define the delay between two reminders after which a reminder must be sent to the administrator and to the known coordinators to encourage them to handle the crisis.
attribute	maxCrisisReminderPeriod: dtSecond used to define the maximum delay after which the crisis is randomly allocated to a coordinator if any or an alert message is sent to the administrator in order to encourage him to add coordinators.
attribute	nextValueForAlertID: dtInteger nextValueForAlertID: dtInteger: used to associate each alert declared with a unique identification value.
attribute	nextValueForCrisisID: dtInteger used to associate each crisis declared with a unique identification value.
attribute	vpLastReminder: dtDateAndTime date and time of the last reminder.
attribute	vpStarted: ptBoolean used to avoid reacting to an actor message if the system is not started (i.e. oeCreateSystemAndEnvironment not executed).
operation	init (AnextValueForAlertID:dtInteger, AnextValueForCrisisID:dtInteger, Aclock:dtDateAndTime, AcrisisReminderPeriod:dtSecond, AmaxCrisisReminderPeriod:dtSecond, AvpLastReminder:dtDateAndTime, AvpStarted:ptBoolean) :ptBoolean

continues in next page ...

... Classes table continuation

used to initialize the current object as a new instance of the ctState type.
--

4.4.2 Primary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the primary types.

DATATYPES	
dtAlertID	
A string used to identify alerts.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid alert identifiers.
dtComment	
a datatype made of a string value used to receive, store and send textual information about crisis and alerts.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid comments.
dtCoordinatorID	
A string used to identify coordinators.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid coordinators identifiers.
dtCrisisID	
A string used to identify crisis.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid crisis identifiers.
dtGPSLocation	
used to define coordinates of geographical positions on earth. It is defined a couple made of a latitude and a longitude.	
attribute	latitude: dtLatitude
	for the latitude part of the coordinate.
attribute	longitude: dtLongitude
	for the longitude part of the coordinate.
operation	is () :ptBoolean
	used to determine which couples are considered as valid dtGPSLocation values.
operation	isNearTo (AGPSLocation:dtGPSLocation) :ptBoolean
	used to determine if locations are considered enough close to be treated as equivalent in the application domain context.
dtLatitude	
used to define a latitude value of a geographical positions on earth.	
extends	dtReal
operation	is () :ptBoolean
	used to determine which strings are considered as valid dtLatitude.
dtLogin	
a login string used to authentify an <i>iCrash</i> user	

continues in next page ...

... Datatypes table continuation

<i>extends</i>	dtString
operation	is() :ptBoolean
used to determine which strings are considered as valid dtLogin.	
dtLongitude	
used to define a longitude value of a geographical positions on earth.	
<i>extends</i>	dtReal
operation	is() :ptBoolean
used to determine which strings are considered as valid dtLongitude.	
dtPassword	
a password string used to authentify an <i>iCrash</i> user	
<i>extends</i>	dtString
operation	is() :ptBoolean
used to determine which strings are considered as valid dtPassword.	
dtPhoneNumber	
a string used to store the phone number from the human declaring the crisis or the alert.	
<i>extends</i>	dtString
operation	is() :ptBoolean
used to determine which strings are considered as valid dtPhoneNumber.	

ENUMERATIONS

etAlertStatus
this type is used to indicate the different validation status of an alert.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.
etCrisisStatus
this type is used to indicate the different handling status of a crisis.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.
etCrisisType
this type is used to indicate the different types of a crisis.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.
etHumanKind
this type is used to indicate the kind of human that informs about a car crash crisis.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.

4.4.3 Primary types - Association types descriptions

The table below is providing comments on the association types of the primary types.

UNDIRECTED ASSOCIATIONS
assctAlertctCrisis
a crisis is related to one or more alerts as the alerts judged to concern all the same crisis due to their location. An alert alerts exactly one crisis.
assctAlertctHuman

continues in next page ...

... Undirected associations table continuation

alerts are notified by human through the communication company. We need to keep an internal representation of those human to allow for communication of alert handling.

assctAuthenticatedactAuthenticated

mainly used to determine if the login request of an authenticated actor can be granted based on the given credentials and the registered ones.

assctCoordinatoractCoordinator

frequent messages must be sent to coordinator especially in relation to crisis they handle.

assctCrisisctCoordinator

at any point in time we need to know if a coordinator is handling existing crisis or not.

assctHumanactComCompany

in order to communicate with humans who informed about potential crisis, we need to record the communication company to use to send them messages.

4.4.4 Primary types - Aggregation types descriptions

There are no aggregation types for the primary types.

4.4.4.1 Primary types - Composition types descriptions

There are no composition types for the primary types.

4.4.5 Secondary types - Class types descriptions

There are no elements in this category in the system analysed.

4.4.6 Secondary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the secondary types.

DATATYPES	
<i>dtSMS</i>	
a datatype made of a string value used to send textual information to human mobile devices.	
attribute	<i>value: ptString</i>
	the textual information.
operation	<i>is():ptBoolean</i>
	used to determine which strings are considered as valid comments.

4.4.7 Secondary types - Association types descriptions

There are no association types for the secondary types.

4.4.8 Secondary types - Aggregation types descriptions

There are no aggregation types for the secondary types.

4.4.9 Secondary types - Composition types descriptions

There are no composition types for the secondary types.

Chapter 5

Operation Model

This section contains the operation schemes of each operation defined in either an actor, its output interface, in a primary or secondary type (class, datatype or enumeration types). The **Messip** OCL code listing is joined to the comment table.

5.1 Environment - Out Interface Operation Scheme for actActivator

5.1.1 Operation Model for oeSetClock

The oeSetClock operation has the following properties:

OPERATION	
<i>oeSetClock[proactive]</i>	
An active message used to statically set the date and time information in the system's state.	
<i>Parameters</i>	
1	AcurrentClock: dtDateAndTime the date and time to be considered as the actual one.
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is supposed to be created and initialized and the provided date and time value is greater than the one known by the system.
<i>Pre-Condition (functional)</i>	
PreF 1	none
<i>Post-Condition (functional)</i>	
PostF 1	the ctState instance post-state is updated to have its clock attribute equal to the given date and time.
<i>Post-Condition (protocol)</i>	
PostP 1	none

The listing 5.1 provides the **Messip** (MCL-oriented) specification of the operation.

```
1
2 /* Pre Protocol:*/
3 preP: let TheSystem: ctState in
```

```

4  let AvpStarted: ptBoolean in
5
6 /* PreP01 */

5.1.2 Operation Model for oeSollicitateCrisisHandling

The *oeSollicitateCrisisHandling* operation has the following properties:

OPERATION
<i>oeSollicitateCrisisHandling[proactive]</i>
A proactive message (message of a pro-active actor with no parameter triggered automatically if the pre protocol condition is true) used to avoid crisis to stay too long in an not handled status.
<i>Return type</i>
ptBoolean
<i>Pre-Condition (protocol)</i>
PreP 1 the system is started
PreP 2 there exist some crisis that are in pending status and for which the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration.
<i>Pre-Condition (functional)</i>
PreF 1 none
<i>Post-Condition (functional)</i>
PostF 1 if there exist coordinators and crisis who stood in a not handled status more than the maximum allowed time then those crisis are randomly allocated to the existing coordinators.
PostF 2 for all other crisis who stood too longly in a not handled status but not more than the maximum delay allowed then a reminder message is sent to the administrator and all coordinator actors of the environment to sollicitate handling of those crisis.
<i>Post-Condition (protocol)</i>
PostP 1 the value of the last reminder known by the system at post state is the system's clock value.

The listing 5.3 provides the **Messip** (MCL-oriented) specification of the operation.

5.2 Environment - Out Interface Operation Scheme for actAdministrator

5.2.1 Operation Model for oeAddCoordinator

The oeAddCoordinator operation has the following properties:

OPERATION	
<i>oeAddCoordinator</i>	
sent to add a new coordinator in the system's post state and environment's post state.	
Parameters	
1	AdtCoordinatorID: dtCoordinatorID used to initialize the id field
2	AdtLogin: dtLogin used to initialize the login field
3	AdtPassword: dtPassword used to initialize the password field
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there cannot exist a ctCoordinator instance with the same id attribute as the one the administrator wants to delete.
Post-Condition (functional)	
PostF 1	the environment has a new instance of coordinator actor allowing for input/output message communication with the system.
PostF 2	the system's state has a new instance of ctCoordinator initialized with the given values.
PostF 3	the new actor instance and ctCoordinator instance are related.
PostF 4	the new actor instance and ctCoordinator instance are related according to the authenticated association.
PostF 5	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

The listing 5.5 provides the **Messip** (MCL-oriented) specification of the operation.

5.2.2 Operation Model for oeDeleteCoordinator

The *oeDeleteCoordinator* operation has the following properties:

OPERATION
<i>oeDeleteCoordinator</i>
sent to delete an existing coordinator in the system's post state and environment's post state.
<i>Parameters</i>
1 AdtCoordinatorID: dtCoordinatorID used for ctCoordinator instance retrieval
<i>Return type</i>
ptBoolean
<i>Pre-Condition (protocol)</i>
PreP 1 the system is started PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)
<i>Pre-Condition (functional)</i>
PreF 1 it is supposed that there exist one ctCoordinator instance with the same id attribute than the one the administrator wants to create.
<i>Post-Condition (functional)</i>
PostF 1 the ctCoordinator class instance having the required id do not belong anymore to the post state as well as is related actCoordinator actor instance. PostF 2 the administrator actor is informed about the satisfaction of its request.
<i>Post-Condition (protocol)</i>
PostP 1 none

The listing 5.7 provides the **Messip** (MCL-oriented) specification of the operation.

5.3 Environment - Out Interface Operation Scheme for actAuthenticated

5.3.1 Operation Model for oeLogin

The *oeLogin* operation has the following properties:

OPERATION	
<i>oeLogin</i>	
sent to request authorization to request access secured system operations.	
Parameters	
1	AdtLogin: dtLogin first information used to determine accessibility rights for the actual actor.
2	AdtPassword: dtPassword second information used to determine accessibility rights for the actual actor.
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is not already logged in ! (i.e. the associated ctAuthenticated instance is not considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	if the login and password provided by the actor correspond to the ones that belong to the ctAuthenticated instance he is related to then a welcome message is sent to the actor (n.b. the logged status is changed as a post-protocol condition); else the actor is notified that he gave incorrect data and all the administrator actors existing in the environment are notified of an intrusion tentative.
Post-Condition (protocol)	
PostP 1	if the authentication information is correct then the actor is known to be logged in ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged)

The listing 5.9 provides the **Messip** (MCL-oriented) specification of the operation.

5.4 Environment - Out Interface Operation Scheme for actComCompany

5.4.1 Operation Model for oeAlert

The *oeAlert* operation has the following properties:

OPERATION	
<i>oeAlert</i>	
Any human having a phone able to connect to the communication companies using the <i>iCrash</i> system can send his company an sms message with structured information in order to declare an alert.	
Parameters	
1	AetHumanKind: etHumanKind the kind of human informing of an alert.
2	AdtDate: dtDate the date of the alert
3	AdtTime: dtTime the time of the alert
4	AdtPhoneNumber: dtPhoneNumber the phone number of the human sending the alert SMS message
5	AdtGPSLocation: dtGPSLocation the GPS position of the phone at the date and time the message was sent.
6	AdtComment: dtComment a free text message sent by the human providing information on the alert that he wants to declare
Return type	
ptBoolean	
Pre-Condition (protocol)	

continues in next page ...

...Operation table continuation

PreP 1	the system is supposed to be created and initialized.
<i>Pre-Condition (functional)</i>	
PreF 1	the date and time the alert is declared is supposed to be in the past with respect to the current time known by the system.
<i>Post-Condition (functional)</i>	
PostF 1	the ctState attribute for the next value for alert IDs is incremented by one at post.
PostF 2	a new alert instance exists in the post state with status pending, instant information (resp. GPS location and comment) based on date and time provided (resp. position and comment); and with alert ID being a string conversion of the dtInteger value available in the pre state in the ctState instance.
PostF 3	if there exist no already registered alert near to the alert currently declared then a new crisis is added in the post state and initialized with: its ID being the one provided by the ctState instance (which is incremented by one in the post state), its type considered as small, its status being pending, its declared time being the same than the alert and a default comment indicating that a report will come later on. else the crisis to which the new alert must be related to is the one related to any alert nearby in the pre-state.
PostF 4	the post state relates the new alert to the previously characterized crisis.
PostF 5	if there is no ctHuman instance having same phone number and same kind in the pre-state then a new one is added in the post-state with given phone number and kind and is associated to the communication company actor used to declare the alert. else the pre-state one is chosen
PostF 6	and this specified ctHuman is related to the new alert thus indicating he has signed the alert.
<i>Post-Condition (protocol)</i>	
PostP 1	none

The listing 5.13 provides the **Messip** (MCL-oriented) specification of the operation.

5.5 Environment - Out Interface Operation Scheme for actCoordinator

5.5.1 Operation Model for *oeCloseCrisis*

The *oeCloseCrisis* operation has the following properties:

OPERATION
<i>oeCloseCrisis</i>
sent to indicate that a crisis should be considered as closed.
Parameters
1 AdtCrisisID: dtCrisisID the identification information used to determine the crisis to close
Return type

continues in next page ...

... Operation table continuation

ptBoolean
<i>Pre-Condition (protocol)</i>
PreP 1 the system is started
PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>
PreF 1 it is supposed that there exist one ctCrisis instance with the same id attribute value as the one provided by the coordinator actor who wants to close.
<i>Post-Condition (functional)</i>
PostF 1 the ctCrisis class instance having the provided id is considered closed in the post state.
PostF 2 There is no handler declared in the system as associated to the crisis.
PostF 3 all the alert instances associated to this crisis do not belong any more to the system's post state.
PostF 4 the coordinator actor is informed about the satisfaction of its request.
<i>Post-Condition (protocol)</i>
PostP 1 none

The listing 5.15 provides the **Messip** (Prolog-oriented) implementation of the operation.

5.5.2 Operation Model for oeGetAlertsSet

The oeGetAlertsSet operation has the following properties:

OPERATION	
oeGetAlertsSet	
sent to request all the ctAlert instances having a specific status.	
Parameters	
1	AetAlertStatus: etAlertStatus the criteria used to select the alerts to send back to the actor
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the post state is the one obtained by satisfying the isSentToCoordinator predicate for each alert having the provided status and for the actor sending the message. (cf. specification of isSentToCoordinator predicate given for the ctAlert type).
Post-Condition (protocol)	
PostP 1	none

The listing 5.16 provides the **Mess1P** (Prolog-oriented) implementation of the operation.

5.5.5 Operation Model for oeReportOnCrisis

The *oeReportOnCrisis* operation has the following properties:

OPERATION	
<i>oeReportOnCrisis</i>	
sent to update the textual information available for a specific handled crisis.	
Parameters	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis to report on
2	AdtComment: dtComment the textual information commenting the crisis
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>	
PreF 1	it is supposed that there exist one crisis in the pre state having the given id.
<i>Post-Condition (functional)</i>	
PostF 1	the comment attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update.
<i>Post-Condition (protocol)</i>	
PostP 1	none

The listing 5.19 provides the **Messip** (Prolog-oriented) implementation of the operation.

Listing 5.19: **Messip** (Prolog-oriented) implementation of the operation *oeReportOnCrisis*.

5.5.6 Operation Model for *oeSetCrisisHandler*

The *oeSetCrisisHandler* operation has the following properties:

OPERATION	
<i>oeSetCrisisHandler</i>	
sent to declare himself as been the handler of a crisis having the specified id.	
Parameters	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	there exist one crisis having the given id in the pre-state.
Post-Condition (functional)	
PostF 1	the ctCrisis instance having the provided id is in handled status at poststate and is associated to the actor that sends the message (which himself is notified with a textual message as confirmation).
PostF 2	All the alerts related to this crisis are sent to the actor such that he can decide how to handle them.
PostF 3	if the crisis was already handled at pre-state then the associated handler actor is notified about the change of handler for one of his crisis (n.b. it might be the same even if not relevant).
PostF 4	a message is sent to the communication company for any human related to an alert associated to the crisis. A human will receive as many messages as alerts he sent despite the fact that they might relate to the same crisis (i.e. one alert, one acknowledgement).

5.5.9 Operation Model for oeValidateAlert

The *oeValidateAlert* operation has the following properties:

OPERATION
<i>oe ValidateAlert</i>
sent to indicate that a specific alert is not a fake.
Parameters
1 AdtAlertID: dtAlertID the identification information used to determine the alert instance
Return type
ptBoolean
Pre-Condition (protocol)
PreP 1 the system is started PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)
PreF 1 it is supposed that there exist one ctAlert instance with the same id attribute value as the one provided by the coordinator actor who wants to validate.
Post-Condition (functional)
PostF 1 the ctAlert class instance having the provided id is considered as valid in the post state and the coordinator actor is informed about the satisfaction of its request.
Post-Condition (protocol)
PostP 1 none

The listing 5.23 provides the **Messip** (Prolog-oriented) implementation of the operation.

5.6 Environment - Out Interface Operation Scheme for actMsrCreator

5.6.1 Operation Model for oeCreateSystemAndEnvironment

The *oeCreateSystemAndEnvironment* operation has the following properties:

OPERATION	
<i>oeCreateSystemAndEnvironment</i>	
sent to request the initialization of the system's class instances and the environment actors instances.	
Parameters	
1	AqtyComCompanies: ptInteger the quantity of communication companies to create in the environment
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	none
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the ctState instance is initialized with the integer 1 for the crisis and alert counters used for their identifications, a value for the clock corresponding to a default initial time (i.e. January 1st, 1970) the crisis reminder period is set to 300 seconds, the maximum crisis reminder period is fixed to 1200 seconds (i.e. 20 minutes), an initial value for the automatic reminder period equal to the current date and time and the system is considered in a started state. Those predicates must be satisfied first since all the other depend on the existence of a ctState instance !
PostF 2	the actMsrCreator actor instance is initiated (remember that since the <i>oeCreateSystemAndEnvironment</i> is a special event its role is to make consistent the post state thus creating the actor and its interfaces is required even though the sending of this message logically would need the actor and its interfaces to already exist ...).
PostF 3	the environment for communication company actors, in the post state, is made of AqtyComCompanies instances allowing for receiving and sending messages to humans.
PostF 4	the environment for administrator actors, in the post state, is made of one instance.
PostF 5	the environment for activator actors, in the post state, is made of one instance allowing for automatic message sending based on current system's and environment state'.

continues in next page ...

... Operation table continuation

PostF 6	the set of ctAdministrator instances at post is made of one instance initialized with 'icrashadmin' (resp. '7WXC1359') for login (resp. password) values.
PostF 7	the association between ctAdministrator and actAdministrator is made of one couple made of the conjointly specified instances.

Post-Condition (protocol)

PostP 1	none is given since the only protocol variable to be modified in the post state is the one initialized with the ctState instance (i.e. vpStarted).
---------	--

The listing 5.24 provides the **Messip** (MCL-oriented) specification of the operation.

5.7 Environment - Actor Operation Scheme for actMsrCreator

5.7.1 Operation Model for init

The `init` operation has the following properties:

OPERATION
<i>init</i>
used to create an instance of the actor together with its interface instances and update the associations with the <code>ctState</code> instance.
<i>Return type</i>
<code>ptBoolean</code>

5.8 Primary Types - Operation Schemes for Class ctAdministrator

5.8.1 Operation Model for init

The `init` operation has the following properties:

OPERATION								
<i>init</i>								
used to initialize the current object as a new instance of the <code>ctAdministrator</code> type.								
<i>Parameters</i>								
<table> <tr> <td>1</td> <td>Alogin: dtLogin</td> </tr> <tr> <td></td> <td>used to initialize the login field</td> </tr> <tr> <td>2</td> <td>Apwd: dtPassword</td> </tr> <tr> <td></td> <td>used to initialize the password field</td> </tr> </table>	1	Alogin: dtLogin		used to initialize the login field	2	Apwd: dtPassword		used to initialize the password field
1	Alogin: dtLogin							
	used to initialize the login field							
2	Apwd: dtPassword							
	used to initialize the password field							
<i>Return type</i>								
<code>ptBoolean</code>								
<i>Post-Condition (functional)</i>								
PostF 1 true iff the system poststate includes the current object as a new <code>ctAdministrator</code> instance having its login and password attributes equal to the one provided as parameters and its <code>vpIsLogged</code> attribute equal to false.								

The listing 5.26 provides the **Messip** (MCL-oriented) specification of the operation.

5.12.4 Operation Model for *isSentToCoordinator*

The *isSentToCoordinator* operation has the following properties:

OPERATION	
<i>isSentToCoordinator</i>	
used to provide a given coordinator with current crisis information.	
Parameters	
1	AactCoordinator: actCoordinator the message destination actor
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the message ieSendACrisis is sent by the simulator to the input interface of the given coordinator actor with the current crisis as parameter value.

The listing 5.41 provides the **Messip** (MCL-oriented) specification of the operation.

```

5.19.2 Operation Model for isNearTo

The *isNearTo* operation has the following properties:

OPERATION
<i>isNearTo</i>
used to determine if locations are considered enough close to be treated as equivalent in the application domain context. In the context of the iCrash system, we compute the distance between two GPS locations using the following Haversine formula. (more details can be found at: http://www.movable-type.co.uk/scripts/latlong.html and http://www.gpsvisualizer.com/calculators#distance)
<i>Parameters</i>
1 AGPSLocation: dtGPSLocation the GPS location to be compared to.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 if the Haversine formula ($\text{ACOS}(\text{SIN}(\text{lat1}) * \text{SIN}(\text{lat2}) + \text{COS}(\text{lat1}) * \text{COS}(\text{lat2}) * \text{COS}(\text{lon2} - \text{lon1})) * 6371$, in which latitudes and longitudes are in radians applied to the two dtGPS coordinates is lower to 100 meters) then the predicate is true and false otherwise.

The listing 5.60 provides the **Messip** (MCL-oriented) specification of the operation.

6.1.1.2 testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock

The *testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock* has the following properties:

TEST STEP	
<i>ts02oeSetClock</i> test the update of the current time.	
<i>Test Sent Message</i>	
TSM 1	out:TheActor sends to system actActivator.outactActivator.oeSetClock (ACurrentClock)
Variables	
V 1	TheActor:actActivator proactive actor responsible of requesting the update of the system's clock.
Constraints	
C 1	TheActor is any instance existing in the current environment status.
C 2	ACurrentClock is a fixed date equal to the 24th November 2017 at 15:20:00 using a 24-hours notation ¹ .
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

The listing 6.3 provides the **Messir** (MCL-oriented) specification of the test step.

¹for more details see the ISO 8601 Data elements and interchange formats – Information interchange – Representation of dates and times - <http://www.iso.org/iso/home/standards/iso8601.htm>

```

1
2 variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5 }
6
7 constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 24
12  ACurrentClock.time.hour.value = 15
13  ACurrentClock.time.minute.value = 20

Listing 6.3: **Messip** (MCL-oriented) specification of the test step *testcase01-ts02oeSetClock*.

6.1.1.3 testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin

The `testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin` has the following properties:

TEST STEP	
<i>ts03oeLogin</i>	
test the authentified access of the administrator	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actAdministrator.outactAdministrator.oeLogin (<code>AdtLogin</code>, <code>AdtPassword</code>)</p>
<i>Variables</i>	
V 1	<p>TheActor:actAdministrator</p> <p>an <code>actAdministrator</code> actor as subtype of <code>actAuthenticated</code> can send <code>oeLogin</code> messages to the system.</p>
<i>Constraints</i>	
C 1	TheActor is any <code>actAdministrator</code> instance existing in the environment. It is thus expected that there exist at least one.
C 2	<code>AdtLogin</code> has its <code>value</code> attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.)
C 3	<code>AdtPassword</code> has its <code>value</code> attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.)
<i>Oracle Constraints</i>	
OC 1	the <code>AMessage</code> value is expected to be equal to the primitive string 'You are logged ! Welcome ...'
OC 2	TheActor receives from system <code>ieMessage(AMessage)</code>

The listing 6.4 provides the **Messir** (MCL-oriented) specification of the test step.

```

1  variables{
2    TheActor : actAdministrator
3    AdtLogin:dtLogin
4    AdtPassword:dtPassword
5  }
6
7
8  constraints{
9    TheActor=TheSystem.rnactAdministrator->any2(true)

21   }
22 }
```

Listing 6.4: **Messir** (MCL-oriented) specification of the test step *testcase01-ts03oeLogin*.

6.1.1.4 testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordinator

The *testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordinator* has the following properties:

TEST STEP	
<i>ts04oeAddCoordinator</i>	
to test the add of a new coordinator by an administrator.	
TSM 1	<p>Test Sent Message</p> <p>out:TheActor</p> <p>sends to system</p> <p>actAdministrator.outactAdministrator.oeAddCoordinator (AdtCoordinatorID, AdtLogin, AdtPassword)</p>
Variables	
V 1	<p>TheActor:actAdministrator</p> <p>actAdministrator actors as being the only one allowed to add coordinators.</p>
Constraints	
C 1	TheActor is any <code>actAdministrator</code> instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
C 2	AdtCoordinatorID is equal to 1 to set the new coordinator ID
C 3	AdtLogin has its value attribute equal to the primitive string 'steve' which is the ID defined for the new coordinator.
C 4	AdtPassword has its value attribute equal to the primitive string 'pwdMessirExcalibur2017' which is the password to be set for steve.
Oracle Constraints	

continues in next page ...

... Test Step table continuation

OC 1	the administrator should have been acknowledged for the adding of the new coordinator.
------	--

The listing 6.5 provides the **Messir** (MCL-oriented) specification of the test step.

```

6.1.1.5 testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout

The `testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout` has the following properties:

TEST STEP	
<i>ts05oeLogout</i>	
to test the logout of a connected administrator.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actAdministrator.outactAdministrator.oeLogout ()</p>
<i>Variables</i>	
V 1	<p>TheActor:actAdministrator</p> <p>an actAdministrator actor as subtype of actAuthenticated can send oeLogout messages to the system.</p>
<i>Constraints</i>	
C 1	TheActor is any <code>actAdministrator</code> instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
<i>Oracle Constraints</i>	

continues in next page ...

... Test Step table continuation

OC 1	the AMessage value is expected to be equal to the primitive string 'You are logged out ! Good Bye ...'
OC 2	the administrator should have received the messahe AMessage.

The listing 6.6 provides the **Messir** (MCL-oriented) specification of the test step.

```

1
2 variables{
3   TheActor : actAdministrator
4 }

17   }
18 }
```

Listing 6.6: **Messir** (MCL-oriented) specification of the test step *testcase01-ts05oeLogout*.

6.1.1.6 testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock

The `testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock` has the following properties:

TEST STEP	
<i>ts06oeSetClock02</i>	
test the update of the current time.	
<i>Test Sent Message</i>	
TSM 1	out:TheActor sends to system actActivator.outactActivator.oeSetClock (ACurrentClock)
<i>Variables</i>	
V 1	TheActor:icrash.environment.actActivator proactive actors responsible of requesting the update of the system's clock.
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status.
C 2	ACurrentClock is a fixed date equal to the 26th November 2017 at 10:15:00 using a 24-hours notation.
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

The listing 6.7 provides the **Messip** (MCL-oriented) specification of the test step.

```

1
2 variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5 }
6
7 constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 26
12  ACurrentClock.time.hour.value = 10

20   }
21 }
```

Listing 6.7: **Messip** (MCL-oriented) specification of the test step *testcase01-ts06oeSetClock02*.

6.1.1.7 testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert

The `testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert` has the following properties:

TEST STEP	
<i>ts07oeAlert1</i>	
tests the declaration of a new alert functionality.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actComCompany.outactComCompany.oeAlert (AetHumanKind, AdtDate, AdtTime, AdtPhoneNumber, AdtGPSLocation, AdtComment)</p>
<i>Variables</i>	
V 1	<p>TheActor:actComCompany</p> <p>actComCompany actors transfer alert declaration messages.</p>
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status. It is expected to exist at least one.
C 2	AetHumanKind is equal to witness
C 3	AdtDate is equal to the 26th of November 2017
C 4	AdtTime is equal to 10:10:16 using a 24-hours.
C 5	AdtPhoneNumber is equal to the ptString value '+3524666445252'.
C 6	AdtGPSLocation is equal to (49.627675 , 6.159590).
C 7	AdtComment is equal to '3 cars involved in an accident.'

continues in next page ...

... Test Step table continuation

<i>Oracle Constraints</i>	
OC 1	AdtSMS is equal to the ptString 'Your alert has been registered. We will handle it and keep you informed'.
OC 2	AdtSMS is sent to the phone number AdtPhoneNumber using the communication company having sent the alert using its ieSmsSend input message.

The listing 6.8 provides the **Messir** (MCL-oriented) specification of the test step.

```

1
2 variables{
3   TheActor : actComCompany
4   AetHumanKind:etHumanKind
5   AdtDate:dtDate
6   AdtTime:dtTime

Chapter 7

Additional Constraints

7.1 Quality Constraints

Description of all the constraints that concern the required quality criteria according to their ISO definition [?].

7.1.1 Functional suitability

Constraints on the degree to which the product provides functions that meet stated and implied needs when the product is used under specified conditions.

7.1.1.1 Functional completeness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.2 Functional correctness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.3 Functional appropriateness

List of requirements on the degree to which the functions facilitate the accomplishment of specified tasks and objectives.

1. (to be filled)

7.1.2 Performance efficiency

Constraints on the performance relative to the amount of resources used under stated conditions

7.1.2.1 Time behaviour

List of requirements on the degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.2 Resource utilization

List of requirements on the degree to which the amounts and types of resources used by a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.3 Capacity

List of requirements on the degree to which the maximum limits of a product or system parameter meet requirements.

1. (to be filled)

7.1.3 Compatibility

Constraints on the degree to which a product, system or component can exchange information with other products, systems or components, and/or perform its required functions, while sharing the same hardware or software environment.

7.1.3.1 Co-existence

List of requirements on the degree to which a product can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.

1. (to be filled)

7.1.3.2 Interoperability

List of requirements on the degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.

1. (to be filled)

7.1.4 Usability

Constraints on the usability degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

7.1.4.1 Appropriateness recognizability

List of requirements on the degree to which users can recognize whether a product or system is appropriate for their needs.

1. (to be filled)

7.1.4.2 Learnability

List of requirements on the degree to which a product or system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.

1. (to be filled)

7.1.4.3 Operability

List of requirements on the degree to which a product or system has attributes that make it easy to operate and control.

1. (to be filled)

7.1.4.4 User error protection

List of requirements on the degree to which a system protects users against making errors.

1. (to be filled)

7.1.4.5 User interface aesthetics

List of requirements on the degree to which a user interface enables pleasing and satisfying interaction for the user.

1. (to be filled)

7.1.4.6 Accessibility

List of requirements on the degree to which a product or system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.

1. (to be filled)

7.1.5 Reliability

Constraints on the degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

7.1.5.1 Maturity

List of requirements on the degree to which a system, product or component meets needs for reliability under normal operation.

1. (to be filled)

7.1.5.2 Availability

List of requirements on the degree to which a system, product or component is operational and accessible when required for use.

1. (to be filled)

7.1.5.3 Fault tolerance

List of requirements on the degree to which a system, product or component operates as intended despite the presence of hardware or software faults.

1. (to be filled)

7.1.5.4 Recoverability

List of requirements on the degree to which, in the event of an interruption or a failure, a product or system can recover the data directly affected and re-establish the desired state of the system.

1. (to be filled)

7.1.6 Security

Constraints on the degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

7.1.6.1 Confidentiality

List of requirements on the degree to which a product or system ensures that data are accessible only to those authorized to have access.

1. (to be filled)

7.1.6.2 Integrity

List of requirements on the degree to which a system, product or component prevents unauthorized access to, or modification of, computer programs or data.

1. (to be filled)

7.1.6.3 Non-repudiation

List of requirements on the degree to which actions or events can be proven to have taken place, so that the events or actions cannot be repudiated later.

1. (to be filled)

7.1.6.4 Accountability

List of requirements on the degree to which the actions of an entity can be traced uniquely to the entity.

1. (to be filled)

7.1.6.5 Authenticity

List of requirements on the degree to which the identity of a subject or resource can be proved to be the one claimed.

1. (to be filled)

7.1.7 Maintainability

Constraints on the degree of effectiveness and efficiency with which a product or system can be modified by the intended maintainers.

7.1.7.1 Modularity

List of requirements on the degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.

1. (to be filled)

7.1.7.2 Reusability

List of requirements on the degree to which an asset can be used in more than one system, or in building other assets.

1. (to be filled)

7.1.7.3 Analysability

List of requirements on the degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.

1. (to be filled)

7.1.7.4 Modifiability

List of requirements on the degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.

1. (to be filled)

7.1.7.5 Testability

List of requirements on the degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.

1. (to be filled)

7.1.8 Portability

Constraints on the degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

7.1.8.1 Adaptability

List of requirements on the degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.

1. (to be filled)

7.1.8.2 Installability

List of requirements on the degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.

1. (to be filled)

7.1.8.3 Replaceability

List of requirements on the degree to which a product can replace another specified software product for the same purpose in the same environment.

1. (to be filled)

7.2 Other Constraints

Any other unclassified constraints judged as required for the product under development.

B.1 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the **Messir** method and inspired by the standard Cokburn template [?].

B.1.1 Use Cases

B.1.1.1 subfunction-oeCloseCrisis

the `actCoordinator`'s goal is to declare a crisis as closed.

USE-CASE DESCRIPTION	
<i>Name</i>	oeCloseCrisis
<i>Scope</i>	system
<i>Level</i>	subfunction
<i>Primary actor(s)</i>	
1	<code>actCoordinator</code> [active]
<i>Goal(s) description</i>	
the <code>actCoordinator</code> 's goal is to declare a crisis as closed.	
<i>Protocol condition(s)</i>	
1	the iCrash system has been deployed.
<i>Pre-condition(s)</i>	
1	none
<i>Main post-condition(s)</i>	
1	the crisis is known by the system to be closed.
2	a message <code>iMessage</code> (<code>AMessage</code>) is sent to the <code>actCoordinator</code> to inform him that his crisis is now considered as closed.

Figure B.1 shows the use case diagram for the oeCloseCrisis subfunction use case

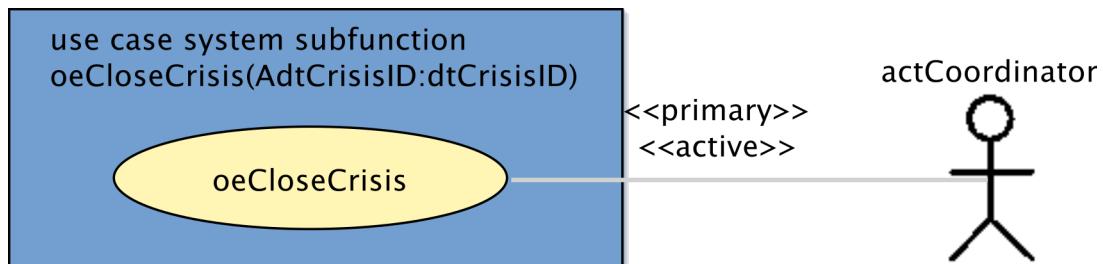

Figure B.1: oeCloseCrisis subfunction use case

Glossary

<i>abstract actor</i> an actor that is not	22
<i>actor</i> An actor is a person, organization, or external system that plays a role in one or more interactions with the system	18
<i>direct actor</i> an actor that interacts directly with the system. It thus belongs to the environment.	22
<i>indirect actor</i> an actor that interacts indirectly with the system through a direct actor. It thus belongs the domain but not to the environment.	22
<i>system operation</i> a functionality of the system that can be triggered by a message sent by an actor belonging to the environment.	18
