

iCrash :
A Crisis Management Case Study
MESSIR Analysis Document
- v 1.4 -

(Report type: Definition)

Wednesday 27th September, 2017 - 19:05

Contents

1	Introduction	13
1.1	Overview	13
1.2	Purpose and recipients of the document	13
1.3	Application Domain	13
1.4	Definitions, acronyms and abbreviations	13
1.5	Document structure	14
2	General Description	15
2.1	Domain Stakeholders	15
2.1.1	Communication Company	15
2.1.2	Humans	16
2.1.3	Coordinators	16
2.1.4	Administrator	16
2.1.5	Creator	17
2.1.6	Activator	17
2.2	System's Actors	18
2.3	Use Cases Model	18
2.3.1	Use Cases	18
2.3.2	Use Case Instance(s)	30
3	Environment Model	35
3.1	Local view 01	35
3.2	Local view 02	35
3.3	Local view 03	35
3.4	Local view 04	35
3.5	Local view 05	35
3.6	Global view 01	35
3.7	Actors and Interfaces Descriptions	39
3.7.1	actActivator Actor	39
3.7.2	actAdministrator Actor	40
3.7.3	actAuthenticated Actor	40
3.7.4	actComCompany Actor	40
3.7.5	actCoordinator Actor	41
3.7.6	actHospital Actor	41
3.7.7	actMsrCreator Actor	42
4	Concept Model	43
4.1	PrimaryTypes-Classes	43
4.1.1	Local view 01	43
4.1.2	Local view 02	43

4.1.3	Local view 03	43
4.1.4	Local view 04	43
4.1.5	Global view 01	43
4.2	PrimaryTypes-Datatypes	43
4.2.1	Local view 06	43
4.2.2	Global view 01	48
4.3	SecondaryTypes-Datatypes	48
4.3.1	Local view 01	48
4.4	Concept Model Types Descriptions	48
4.4.1	Primary types - Class types descriptions	48
4.4.2	Primary types - Datatypes types descriptions	51
4.4.3	Primary types - Association types descriptions	53
4.4.4	Primary types - Aggregation types descriptions	53
4.4.5	Secondary types - Class types descriptions	53
4.4.6	Secondary types - Datatypes types descriptions	53
4.4.7	Secondary types - Association types descriptions	54
4.4.8	Secondary types - Aggregation types descriptions	54
4.4.9	Secondary types - Composition types descriptions	54
5	Operation Model	55
5.1	Environment - Out Interface Operation Scheme for actActivator	55
5.1.1	Operation Model for oeSetClock	55
5.1.2	Operation Model for oeSollicitateCrisisHandling	55
5.2	Environment - Out Interface Operation Scheme for actAdministrator	56
5.2.1	Operation Model for oeAddCoordinator	56
5.2.2	Operation Model for oeDeleteCoordinator	57
5.3	Environment - Out Interface Operation Scheme for actAuthenticated	57
5.3.1	Operation Model for oeLogin	57
5.3.2	Operation Model for oeLogout	59
5.4	Environment - Out Interface Operation Scheme for actComCompany	60
5.4.1	Operation Model for oeAlert	60
5.5	Environment - Out Interface Operation Scheme for actCoordinator	61
5.5.1	Operation Model for oeCloseCrisis	61
5.5.2	Operation Model for oeGetAlertsSet	62
5.5.3	Operation Model for oeGetCrisisSet	64
5.5.4	Operation Model for oeInvalidateAlert	64
5.5.5	Operation Model for oeReportOnCrisis	65
5.5.6	Operation Model for oeSendHospitalInfo	65
5.5.7	Operation Model for oeSetCrisisHandler	66
5.5.8	Operation Model for oeSetCrisisStatus	66
5.5.9	Operation Model for oeSetCrisisType	67
5.5.10	Operation Model for oeValidateAlert	68
5.6	Environment - Out Interface Operation Scheme for actMsrCreator	68
5.6.1	Operation Model for oeCreateSystemAndEnvironment	68
5.7	Environment - Actor Operation Scheme for actMsrCreator	69
5.7.1	Operation Model for init	69
5.8	Primary Types - Operation Schemes for Class ctAdministrator	69
5.8.1	Operation Model for init	69
5.9	Primary Types - Operation Schemes for Class ctAlert	70

5.9.1	Operation Model for init	70
5.9.2	Operation Model for isSentToCoordinator	70
5.10	Primary Types - Operation Schemes for Class ctAuthenticated	71
5.10.1	Operation Model for init	71
5.11	Primary Types - Operation Schemes for Class ctCoordinator	71
5.11.1	Operation Model for init	71
5.12	Primary Types - Operation Schemes for Class ctCrisis	72
5.12.1	Operation Model for init	72
5.12.2	Operation Model for handlingDelayPassed	72
5.12.3	Operation Model for maxHandlingDelayPassed	73
5.12.4	Operation Model for isSentToCoordinator	73
5.12.5	Operation Model for isAllocatedIfPossible	73
5.13	Primary Types - Operation Schemes for Class ctHuman	74
5.13.1	Operation Model for init	74
5.13.2	Operation Model for isAcknowledged	74
5.14	Primary Types - Operation Schemes for Class ctState	74
5.14.1	Operation Model for init	74
5.15	Primary Types - Operation Schemes for Datatype dtAlertID	75
5.15.1	Operation Model for is	75
5.16	Primary Types - Operation Schemes for Datatype dtComment	75
5.16.1	Operation Model for is	75
5.17	Primary Types - Operation Schemes for Datatype dtCoordinatorID	76
5.17.1	Operation Model for is	76
5.18	Primary Types - Operation Schemes for Datatype dtCrisisID	76
5.18.1	Operation Model for is	76
5.19	Primary Types - Operation Schemes for Datatype dtGPSLocation	76
5.19.1	Operation Model for is	76
5.19.2	Operation Model for isNearTo	77
5.20	Primary Types - Operation Schemes for Datatype dtLatitude	77
5.20.1	Operation Model for is	77
5.21	Primary Types - Operation Schemes for Datatype dtLogin	77
5.21.1	Operation Model for is	77
5.22	Primary Types - Operation Schemes for Datatype dtLongitude	78
5.22.1	Operation Model for is	78
5.23	Primary Types - Operation Schemes for Datatype dtPassword	78
5.23.1	Operation Model for is	78
5.24	Primary Types - Operation Schemes for Datatype dtPhoneNumber	78
5.24.1	Operation Model for is	78
5.25	Primary Types - Operation Schemes for Enumeration etAlertStatus	79
5.25.1	Operation Model for is	79
5.26	Primary Types - Operation Schemes for Enumeration etCrisisStatus	79
5.26.1	Operation Model for is	79
5.27	Primary Types - Operation Schemes for Enumeration etCrisisType	79
5.27.1	Operation Model for is	79
5.28	Primary Types - Operation Schemes for Enumeration etHumanKind	80
5.28.1	Operation Model for is	80
5.29	Secondary Types - Operation Schemes for Classes	80
5.30	Secondary Types - Operation Schemes for Datatype dtSMS	80
5.30.1	Operation Model for is	80

5.31 Secondary Types - Operation Schemes for Enumerations	80
6 Test Model(s)	81
6.1 Test Model for testcase01	81
6.1.1 Test Steps Specification	81
6.1.2 Test Case Instance - instance01	93
6.1.3 Test Case Instance - instance01Part01	93
6.1.4 Test Case Instance - instance01Part02	95
7 Additional Constraints	97
7.1 Quality Constraints	97
7.1.1 Functional suitability	97
7.1.2 Performance efficiency	97
7.1.3 Compatibility	98
7.1.4 Usability	98
7.1.5 Reliability	99
7.1.6 Security	100
7.1.7 Maintainability	100
7.1.8 Portability	101
7.2 Other Constraints	102
A Undocumented Messir Specification Elements	103
A.1 Undocumented Use Case Instances	103
A.1.1 Undocumented Use Case Instances - User-Goal Level	103
A.1.2 Undocumented Use Case Instance Views	103
A.2 Undocumented Primary Types	103
A.2.1 Undocumented Primary Classe Types	103
A.2.2 Undocumented Primary Datatype Types	103
A.2.3 Undocumented Primary Enumeration Types	103
A.3 Undocumented Concept Model Views	103
A.4 Undocumented Operation Specifications	103
A.5 Undocumented Test-Case Instance Specifications	104
B Specification project lu.uni.lassy.excalibur.examples.icrash	105

Chapter 1

Introduction

1.1 Overview

iCrash is a simple system dedicated to any person who wants to inform of a car crash crisis situation in order to allow for crisis handling. At anytime and anywhere, anyone can be the witness or victim of a car crash and might be in a situation allowing for alerting this crisis. The *iCrash* system has for objectives to support crisis declaration and secure administration and crisis handling by the *iCrash* professional users.

1.2 Purpose and recipients of the document

This document is an analysis document complying with the **Messip** methodology [?]. Its intent is to provide an example of a precise specification of the functional properties of the *iCrash* system.

The recipients of this document are:

- the *iCrash* system's buyer company (ABC): this document is used as a contractual document jointly with any other document considered as useful (as requirement elicitation document, ...) in order to have a higher degree of precision in requirement description. It is also used as a basis document for the *iCrash* system validation using specification based testing.
- the *iCrash* system development company (ADC) is expected to use this document as the basis for development (mainly design, implementation, maintenance). It is also used for verification and validation using test plans defined using the analysis models described in this document and according to the **Messip** methodology.

1.3 Application Domain

The *iCrash* system belongs to the Crisis Management Systems Domain. It is a system dedicated to crisis professional and non professional end users. It has to be considered as an autonomous and external service for the society. It is not an institutional system certified and guaranteed by any governmental entity and thus, must be used with caution.

1.4 Definitions, acronyms and abbreviations

N.A.

1.5 Document structure

The document structure is designed to be coherent with the **Messip** methodology [?]. Section 2 provides a general description of the system purpose, its users, its environment and some general non functional requirements. A more detailed description of the non functional requirements, if any, are provided in section ?. The **system operation** triggered by events sent by the external **actors** belonging to the environment are described in Section 3. The *iCrash* concepts used to represent the any persistent or transient information is given in Section 4. The precise specification of the system operations in term of system's state changes, events sent together with the constraints on the allowed sequences of system operations are described in Section 5.

Chapter 2

General Description

In the context of the **Messip** method, the information provided in this section is intended to present the system for which the **Messip** analysis is provided. The content of this section is made accordingly to the requirements elicitation document that might have been done during the project but also adapted coherently in order to be an abstract introduction to the **Messip** analysis.

2.1 Domain Stakeholders

All stakeholders of the system are detailed in this section. After a brief description of a stakeholder, its objectives are first stated. Thereafter, the responsibilities of the stakeholder are detailed which help to achieve the stakeholder objectives to a certain degree. While the objectives characterize the general problems addressed by the *iCrash* system, the responsibilities describe concrete actions that are expected from a stakeholder. Some of these responsibilities can be traced looking at the use case described in Section B.1, and hence must be supported by the *iCrash* system. All stakeholders listed in this section have an interest in the system or are affected by the system in some way, but only a subset of the stakeholders are directly involved in the use cases described. Let us remind that use case diagrams or descriptions are not **Messip** analysis phase mandatory outputs. They are proposed as informal means to help understanding the semantics of the system specification made of the mandatory analysis models, which provide a complete executable specification.

2.1.1 Communication Company

A Communication Company is a company that has the capacity to ensure communication of information between its customers and the *iCrash* system. The objectives of a Communication Company are:

- to be able to deliver any SMS sent by any human to the *iCrash* 's phone number.
- to be able to transmit SMS messages from the ABC company that owns the *iCrash* system to any human having an SMS compatible device accessible using a phone number.

In order to achieve these objectives, the responsibilities of a Communication Company are:

- ensure confidentiality and integrity of the information sent by a human to the *iCrash* system or from the system to a human.
- to be always available and reliable.

2.1.2 Humans

A human is any person who considers himself related to a car crash either as a witness, a victim or an anonymous person. The objectives of a human are:

- inform the *iCrash* system about the crisis situation he detected.
- be sure that the ABC company has been informed about the situation.
- to be informed about the situation of the crisis he is related to as a victim or witness.

In order to achieve these objectives, the responsibilities of a human are:

- to provide as much details as possible concerning the crisis to the ABC company.
- to declare a crisis only if the crisis is real.
- to have access to the SMS compatible communication device he used to communicate with the *iCrash* system.

2.1.3 Coordinators

A coordinator is an employee of the ABC company being responsible of handling one or several crises. The objectives of a coordinator are:

- to securely monitor the existing alerts and crisis.
- to securely manage alerts and crisis until their termination.

In order to achieve these objectives, the responsibilities of a coordinator are:

- to be capable to determine how an alert received should be considered.
- to be available to react to requests to handle alerts and crisis.
- to be autonomous in handling crisis and to report on its handling.
- to be able to decide when a crisis or an alert can be closed.
- to know its system identification information for secure usage of the system.

2.1.4 Administrator

An administrator is an employee of the ABC company being responsible of administrating the *iCrash* system. The objectives of an administrator are:

- to add or delete coordinator actors from the system and its environment.

In order to achieve these objectives, the responsibilities of a coordinator are:

- know the company employees that can be coordinators and that have access to the system.
- to know its system identification information for secure usage of the system.
- to know the security policy of the ABC company.
- to communicate the coordinators their identification information for secure system usage.

2.1.5 Creator

Any system has a `Creator` stakeholder which is a technician who is installing the *iCrash* system on the targeted deployment infrastructure.

The objectives of a `Creator` are:

- to install the *iCrash* system
- to define the values for the initial system's state
- to define the values for the initial system's environment
- to ensure the integration of the *iCrash* system with its initial environment

In order to achieve these objectives, the responsibilities of a `Creator` are:

- provide the necessary data to the *iCrash* system for its initialization.

2.1.6 Activator

An `activator` is a logical representation of the active part the *iCrash* system. It represents an implicit stakeholder belonging to the system's environment that interacts with the *iCrash* system autonomously without the need of a external entity. It is usually used for representing time triggered functionalities.

The objectives of a `activator` are:

- to communicate the current time to the system
- to notify the administrator that some crisis are still pending for a too long time.

In order to achieve these objectives, the responsibilities of a `activator` are:

- to know the current universal time
- to send the messages to the system according to the time constraints specifically defined for it.

2.2 System's Actors

The objective of this section is not to provide the full requirement elicitation document in this section but to reuse a part of this document to provide a informal introduction to the **Messir** specification of the system under development. The use case model is made of a use case diagrams modelling abstractly and informally the actors and their use cases together with a set of use cases descriptions. In addition, those diagrams and description tables are adapted to the **Messir** specification since actor and messages names together with parameters are partly adapted to be consistent with the specification identifiers (see [?] for more details).

Among all the stakeholders presented in the previous section, we can determine five types of direct actors¹:

- `actComCompany`: for the Communication Company stakeholder.
- `actAdministrator`: for the Administrator stakeholder.
- `actCoordinator`: for the Coordinators stakeholders.
- `actActivator`: for the Activator stakeholder.
- `actMsrCreator`: for the Creator stakeholder.

In addition to those system actors, we can add five other types of actors related to the system's ones. Those five actors are grouped into two categories:

- *Indirect actors*
 - *Witness*: for any human that is a witness of a car crash
 - *Victim*: for any human that is a victim of a car crash
 - *Anonymous*: for any human that want to inform about a car crash while staying anonymous.
- *Abstract actors*
 - `actHuman`: represent abstractly any kind of human being actor wanting to communicate with the ABC system in the context of a car crash.
 - `actAuthenticated`: for the logical Activator stakeholder.

2.3 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the **Messir** method and inspired by the standard Cokburn template [?].

2.3.1 Use Cases

2.3.1.1 summary-suDeployAndRun

The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.

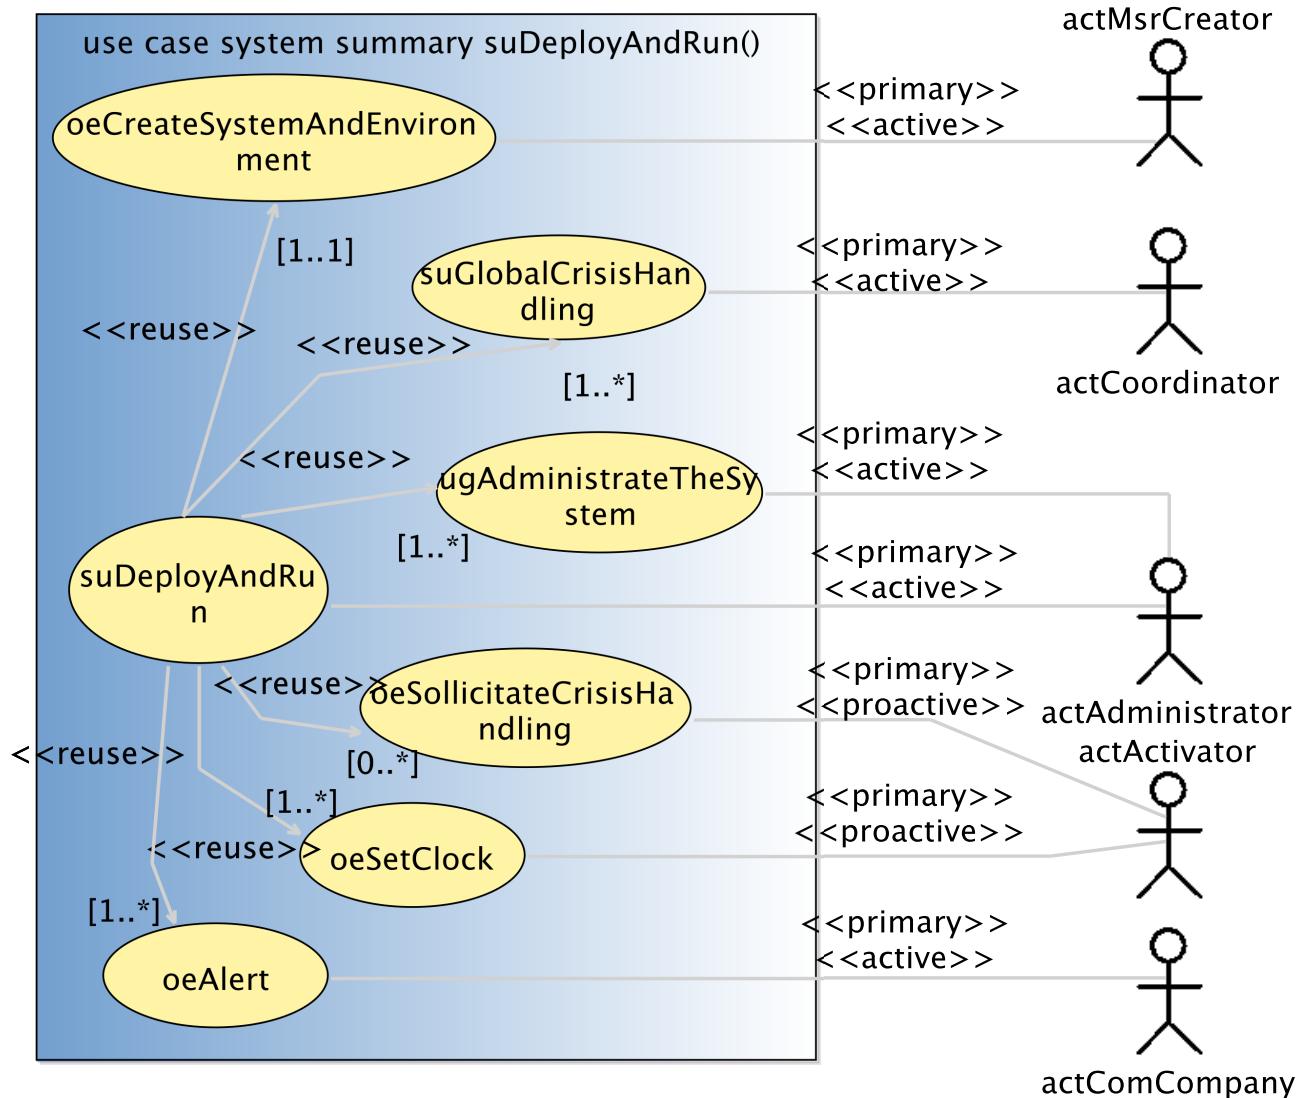

¹The naming conventions in **Messir** propose to start each type name by lowercase letters indicating the meta model type used (i.e. act for actors, ct for class type,). In addition to ease the reading it makes the translational semantics into Prolog code more straightforward.

USE-CASE DESCRIPTION	
<i>Name</i>	suDeployAndRun
<i>Scope</i>	system
<i>Level</i>	summary
Primary actor(s)	
1	actAdministrator [active]
Secondary actor(s)	
1	actMsrCreator [active]
2	actCoordinator [active, multiple]
3	actActivator [proactive]
4	actComCompany [active]
Goal(s) description	
The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.	
Reuse	
1	<u>oeCreateSystemAndEnvironment [1..1]</u>
2	<u>ugAdministrateTheSystem [1..*]</u>
3	<u>suGlobalCrisisHandling [1..*]</u>
4	<u>oeSetClock [1..*]</u>
5	<u>oeSollicitateCrisisHandling [0..*]</u>
6	<u>oeAlert [1..*]</u>
Protocol condition(s)	
1	the iCrash system has never been deployed and used
Pre-condition(s)	
1	none
Main post-condition(s)	
1	the iCrash system has been created and has handled the crisis situations for which it received alerts through the communication company.
Main Steps	
a	the actor actMsrCreator executes the <u>oeCreateSystemAndEnvironment</u> use case
b	the actor actAdministrator executes the <u>ugAdministrateTheSystem</u> use case
c	the actor actComCompany executes the <u>oeAlert</u> use case
d	the actor actActivator executes the <u>oeSetClock</u> use case
e	the actor actActivator executes the <u>oeSollicitateCrisisHandling</u> use case
f	the actor actCoordinator executes the <u>suGlobalCrisisHandling</u> use case
Steps Ordering Constraints	
1	step (a) must be always the first step.
2	step (f) can be executed by different actCoordinator actors.
3	if (e) then previously (d).

Figure 2.1 shows the use case diagram for the suDeployAndRun summary use case

2.3.1.2 summary-suGlobalCrisisHandling

the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.

Figure 2.1: `suDeployAndRun` summary use case

USE-CASE DESCRIPTION	
<i>Name</i>	suGlobalCrisisHandling
<i>Scope</i>	system
<i>Level</i>	summary
Primary actor(s)	
1	actCoordinator [active]
Goal(s) description	
the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.	
Reuse	
1	ugSecurelyUseSystem [1..*]
2	ugMonitor [1..*]
3	ugManageCrisis [1..*]
Protocol condition(s)	
1	the iCrash system has been deployed
2	the coordinator actor involved in the use case has been declared by the actor actAdministrator
Pre-condition(s)	
1	none
Main post-condition(s)	
1	modifications have been made by the coordinator on existing alerts or crisis OR the coordinator requested an updated status on existing alerts or crisis.
Main Steps	
a	the actor actCoordinator executes the ugSecurelyUseSystem use case
b	the actor actCoordinator executes the ugMonitor use case
c	the actor actCoordinator executes the ugManageCrisis use case
Steps Ordering Constraints	
1	steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)).
2	steps (a) (b) and (c) can be executed multiple times.

Figure 2.2 shows the use case diagram for the suGlobalCrisisHandling user goal use case

2.3.1.3 usergoal-ugAdministateTheSystem

the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

USE-CASE DESCRIPTION	
<i>Name</i>	ugAdministateTheSystem
<i>Scope</i>	system
<i>Level</i>	usergoal
Primary actor(s)	
1	actAdministrator [active]
Goal(s) description	
the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

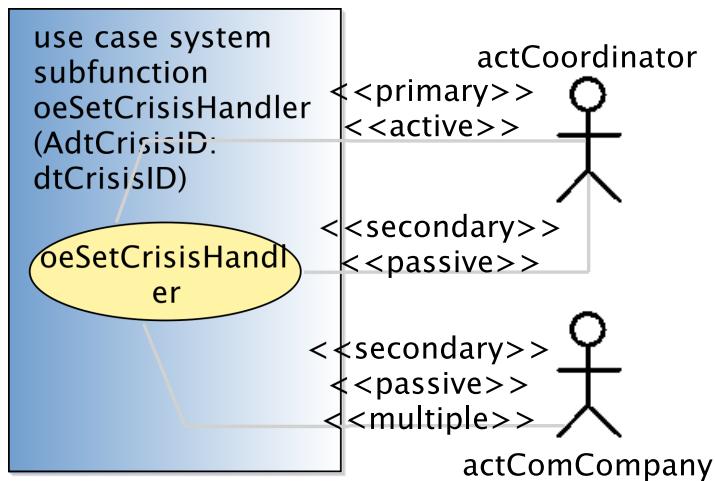

Figure 2.7: oeSetCrisisHandler subfunction use case

2.3.1.9 subfunction-oeSollicitateCrisisHandling

the actActivator's goal is to decrease the number of unhandled crisis.

USE-CASE DESCRIPTION	
Name	oeSollicitateCrisisHandling
Scope	system
Level	subfunction
<i>Primary actor(s)</i>	
1	actActivator [proactive]
<i>Secondary actor(s)</i>	
1	actCoordinator [passive, multiple]
2	actAdministrator [passive]
<i>Goal(s) description</i>	
the actActivator's goal is to decrease the number of unhandled crisis.	
<i>Protocol condition(s)</i>	
1	the iCrash system has been deployed.
2	there exist some crisis still pending and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.

continues in next page ...

... Use-Case Description table continuation

Pre-condition(s)	
1 none	
Main post-condition(s)	
1	a simple text message ieMessage('There are alerts not treated since more than the defined delay. Please REACT !') is sent to the system administrator and to all the coordinators of the environment for each crisis that is known to be not handled and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.'
2	the reminder period for the concerned crisis is initialized.

Figure 2.8 shows the use case diagram for the oeSollicitateCrisisHandling subfunction use case

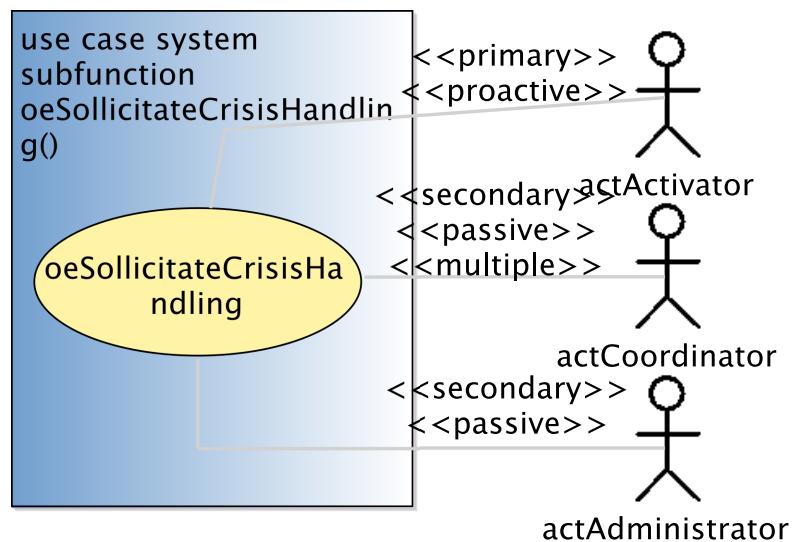

Figure 2.8: oeSollicitateCrisisHandling subfunction use case

2.3.2 Use Case Instance(s)

2.3.2.1 Use-Case Instance - uciSimpleAndCompletePart01:suDeployAndRun

First part of a use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
<i>Instantiated Use Case</i>	
<code>suDeployAndRun</code>	
<i>Instance ID</i>	
<code>uciSimpleAndCompletePart01</code>	
<i>Remarks</i>	
a	shows the system initialization and the first administrative tasks by the administrator.
b	The unique and always existing <code>actMsrCreator</code> actor instance (named here <code>theCreator</code>) requests the initialization of the system and its environment (made of one administrator identified here by <code>bill</code>), one activator actor (identified by <code>theClock</code>) and indicating that the number of communication company actor instances for the system's environment is 4 (one of them is identified here by <code>tango</code>)
c	the administrator logs in to initialize a coordinator
d	an alert is received. Time is going on without having the coordinator handling the alert which let's the proactive actor trigger the automatic solicitation of crisis handling.
e	this first part stops before the coordinator logs in the system.

Figure 2.9 shows the sequence diagram representing the first part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

2.3.2.2 Use-Case Instance - uciSimpleAndCompletePart02:suDeployAndRun

Second part of a simple and complete use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

SUMMARY USE-CASE INSTANCE	
<i>Instantiated Use Case</i>	
<code>suDeployAndRun</code>	
<i>Instance ID</i>	
<code>uciSimpleAndCompletePart02</code>	
<i>Remarks</i>	
a	starts when the coordinator logs in the system until the full handling of all the existing crisis.
b	shows an instantiated case of handling of a crisis by a coordinator until its closure after reporting.

Figure 2.10 shows the sequence diagram representing the second part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

2.3.2.3 Use-Case Instance - uciugSecurelyUseSystem:ugSecurelyUseSystem

Chapter 3

Environment Model

We provide below the view(s) defined for the **Messip** environment model (cf. [?]) of the system.

3.1 Local view 01

Figure 3.1 shows the local view giving the second part of the environment model of the system in term of its state class, actors with their input and output interfaces and all related associations.

3.2 Local view 02

Figure 3.2 shows the local view giving the second part the environment model of the system in term of its state class, actors with their input and output interfaces and all related associations.

3.3 Local view 03

Figure 3.3 shows the local view for the administrator actor and interfaces

3.4 Local view 04

Figure 3.4 shows the local view for the coordinator actor and interfaces

3.5 Local view 05

Figure 3.5 shows the local view for the authenticated actor and interfaces

3.6 Global view 01

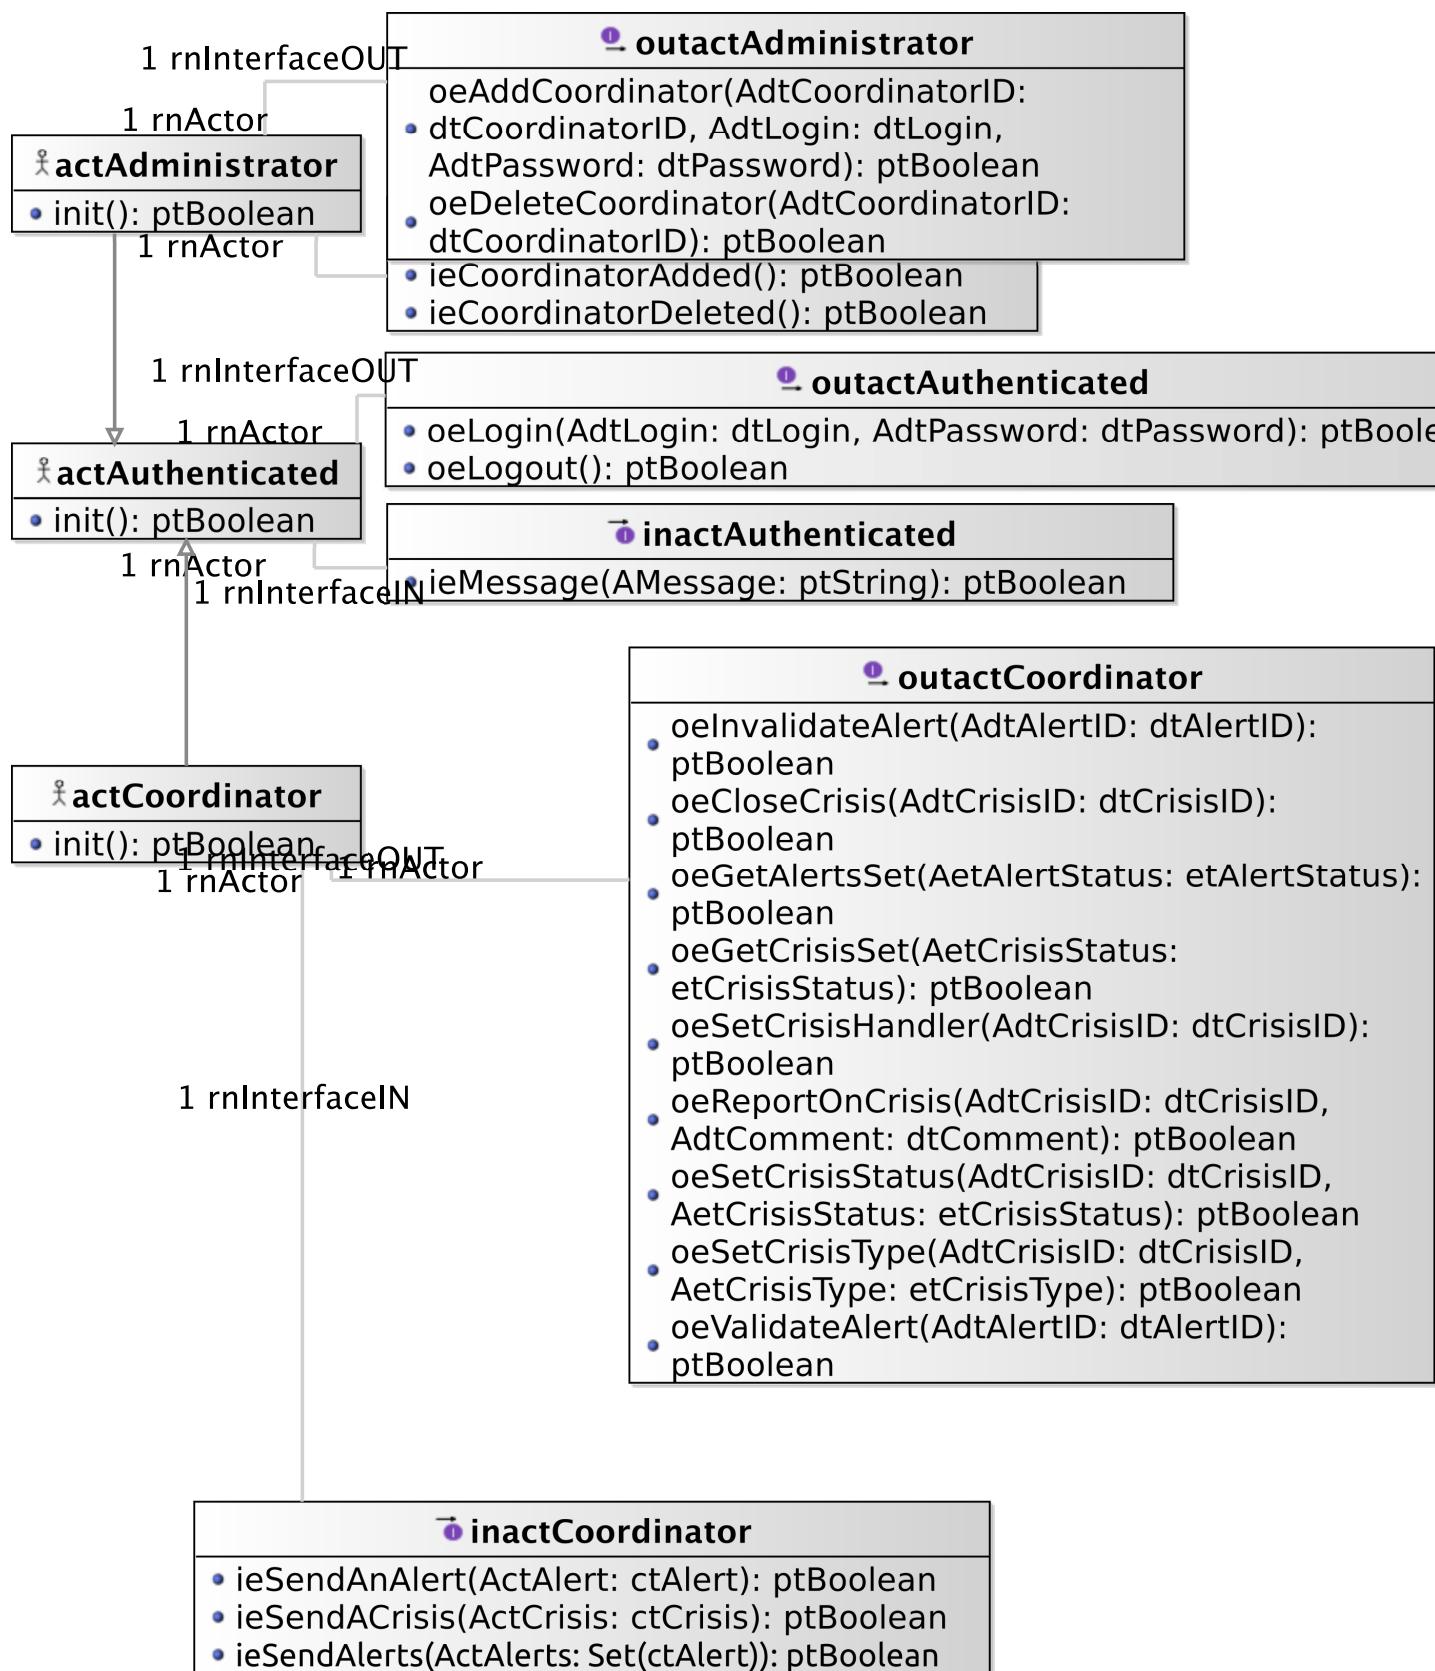

Figure 3.1: Environment Model - Local View 01. environment model local view - Part 1.

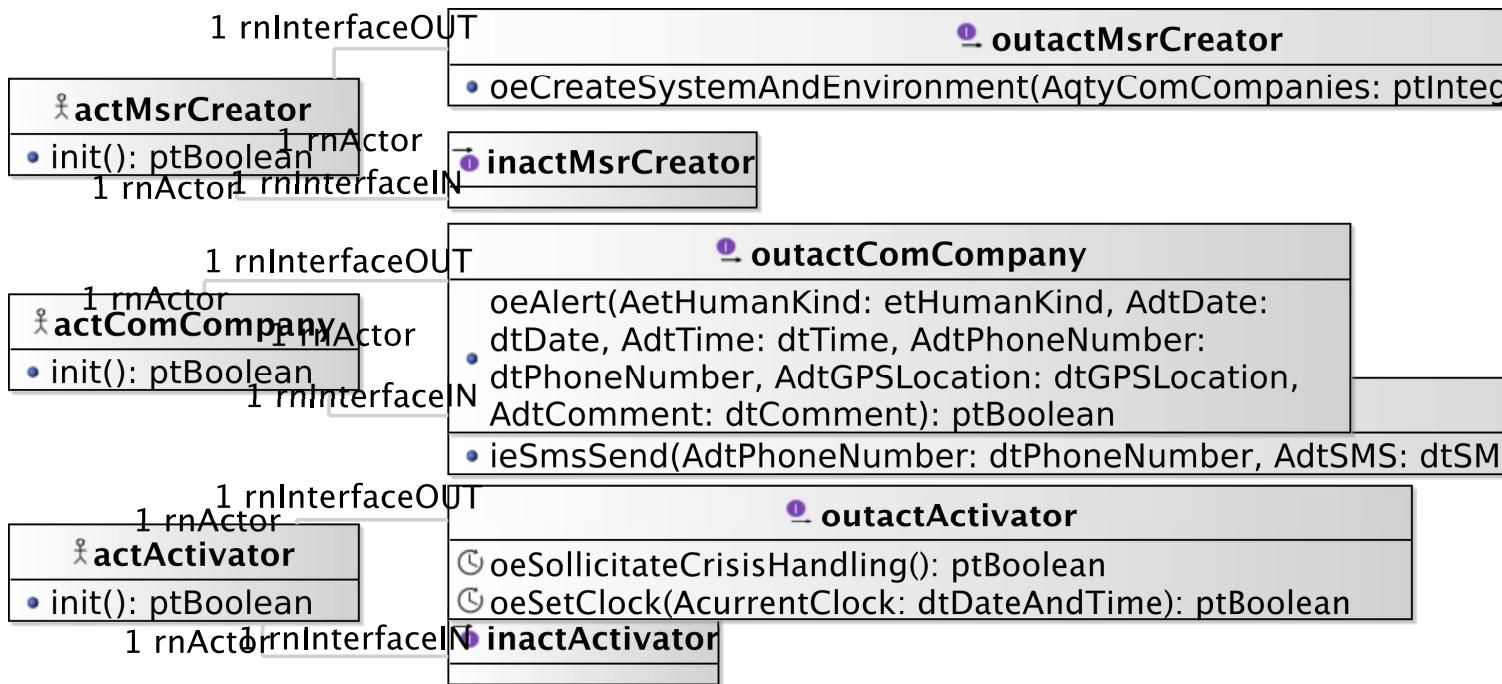

Figure 3.2: Environment Model - Local View 02. environment model local view - Part 2.

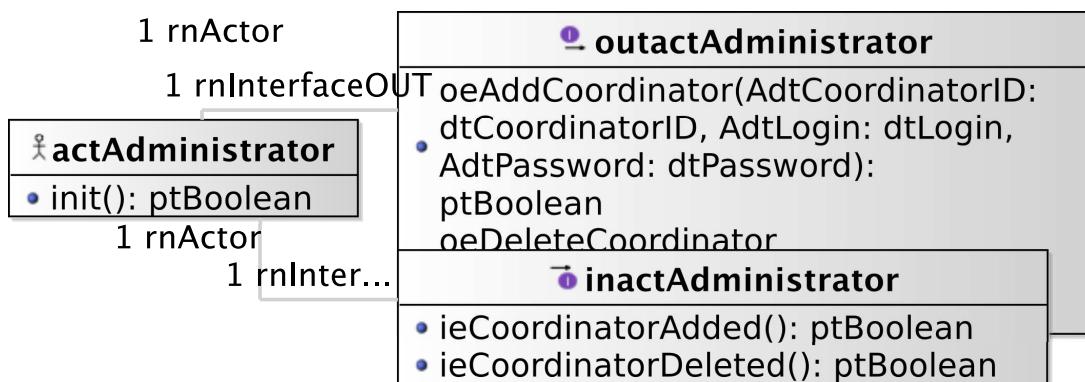

Figure 3.3: Environment Model - Local View 03. administrator actor environment model view.

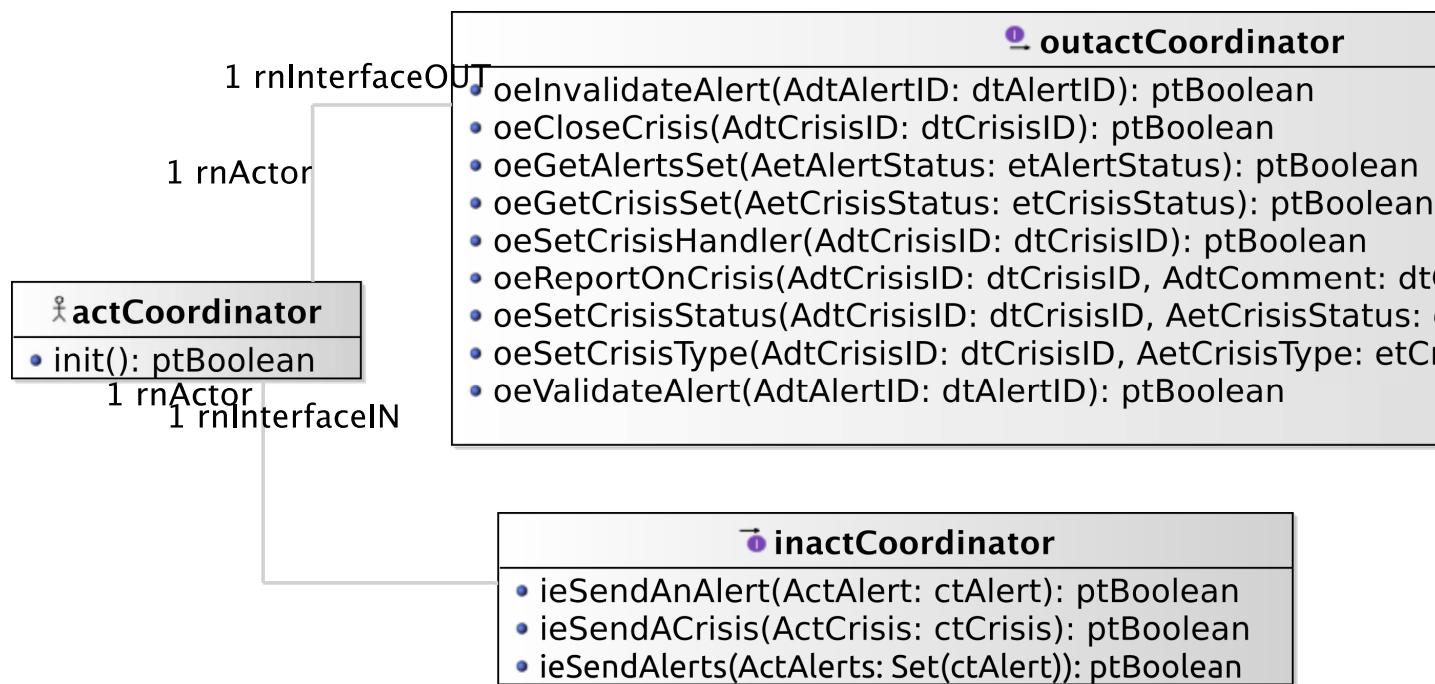

Figure 3.4: Environment Model - Local View 04. coordinator actor environment model view.

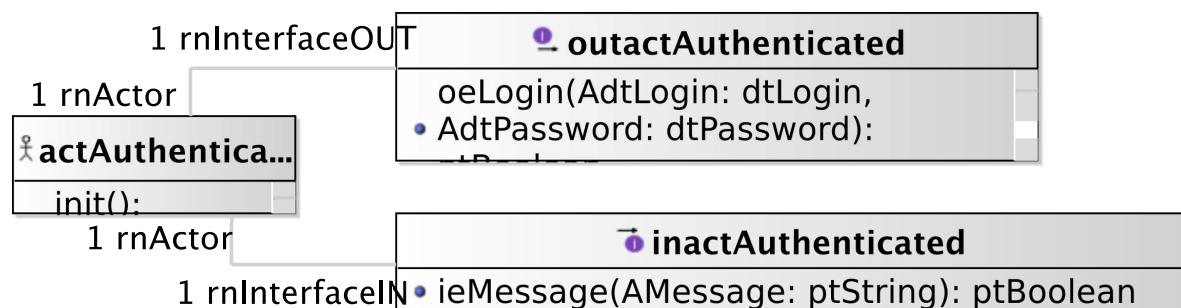

Figure 3.5: Environment Model - Local View 05. authenticated actor environment model local view.

Figure 3.6 shows a global view for all actors with their relationships with ctState

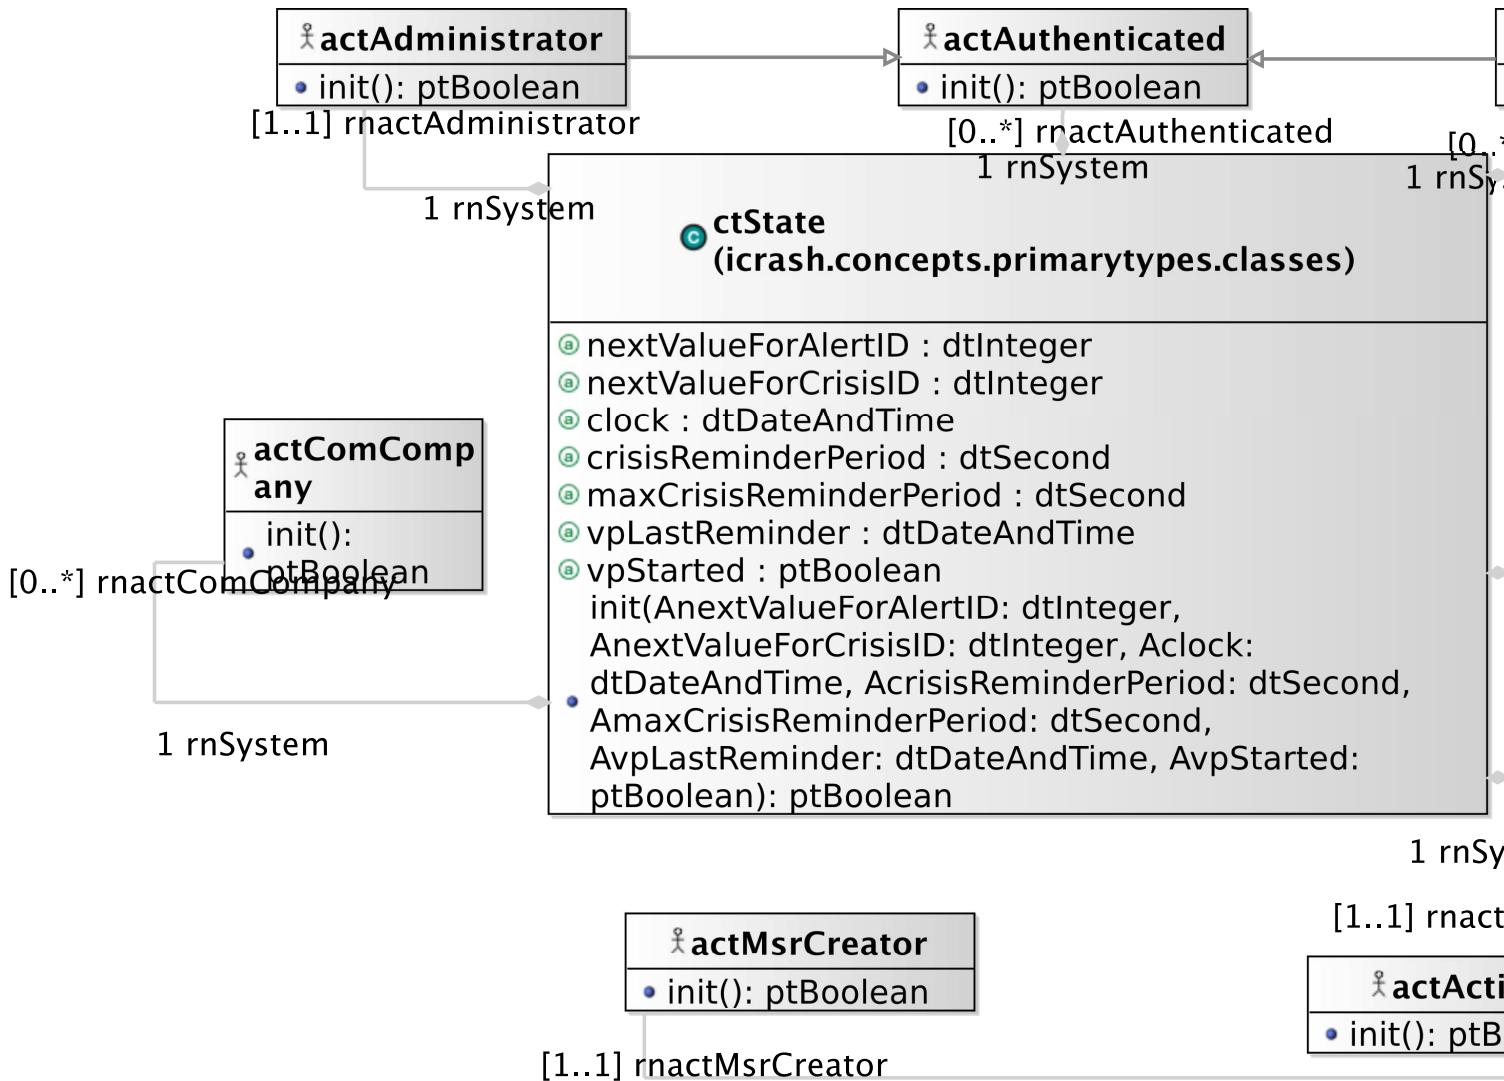

Figure 3.6: Environment Model - Global View 01. em-gv-01 environment model global view.

3.7 Actors and Interfaces Descriptions

We provide for the given views the description of the actors together with their associated input and output interface descriptions.

3.7.1 actActivator Actor

ACTOR
<i>actActivator</i>
represents a logical actor for time automatic message sending based on system's or environment status.

continues in next page ...

... Actor table continuation

<i>OutputInterfaces</i>	
OUT 1	[proactive] oeSollicitateCrisisHandling() :ptBoolean used to avoid crisis to stay too long in an not handled status.
OUT 2	[proactive] oeSetClock(AcurrentClock:dtDateAndTime) :ptBoolean used to update the system's time

3.7.2 actAdministrator Actor

ACTOR	
<i>actAdministrator</i>	
	represents an actor responsible of administration tasks for the <i>iCrash</i> system.
<i>Extends</i>	
	icrash.environment.actAuthenticated
<i>OutputInterfaces</i>	
OUT 1	oeAddCoordinator(AdtCoordinatorID:dtCoordinatorID, AdtLogin:dtLogin, AdtPassword:dtPassword) :ptBoolean sent to add a new coordinator in the system's post state and environment's post state.
OUT 2	oeDeleteCoordinator(AdtCoordinatorID:dtCoordinatorID) :ptBoolean sent to delete an existing coordinator in the system's post state and environment's post state.
<i>InputInterfaces</i>	
IN 1	ieCoordinatorAdded() :ptBoolean its reception confirms the creation of the requested coordinator.
IN 2	ieCoordinatorDeleted() :ptBoolean its reception confirms the deletion of the requested coordinator.

3.7.3 actAuthenticated Actor

ACTOR	
<i>actAuthenticated</i>	
	abstract actor providing reusable input and output interfaces for actors that need to authenticate themselves.
<i>OutputInterfaces</i>	
OUT 1	oeLogin(AdtLogin:dtLogin, AdtPassword:dtPassword) :ptBoolean sent to request authorization to request access secured system operations.
OUT 2	oeLogout() :ptBoolean sent to end the secured access to specific system operations.
<i>InputInterfaces</i>	
IN 1	ieMessage(AMessage:ptString) :ptBoolean allows for receiving general textual messages.

3.7.4 actComCompany Actor

ACTOR	
<i>actComCompany</i>	
<i>continues in next page ...</i>	

...Actor table continuation

represents the communication company stakeholder ensuring the input/ouput of textual messages with humans having communicaiton devices.

OutputInterfaces
OUT 1 oeAlert (AetHumanKind:etHumanKind, AdtDate:dtDate, AdtTime:dtTime, AdtPhoneNumber:dtPhoneNumber, AdtGPSLocation:dtGPSLocation, AdtComment:dtComment) :ptBoolean sent to alert of a potential crisis situation.
InputInterfaces
IN 1 ieSmsSend (AdtPhoneNumber:dtPhoneNumber, AdtSMS:dtSMS) :ptBoolean allows for receiving textual messages to be dispatched to the communication company customers having the provided phone number.

3.7.5 actCoordinator Actor

ACTOR
actCoordinator
represents actor responsible of handling one or several crisis for the <i>iCrash</i> system.
Extends
icrash.environment.actAuthenticated
OutputInterfaces
OUT 1 oeInvalidateAlert (AdtAlertID:dtAlertID) :ptBoolean sent to indicate that an alert should be considered as closed.
OUT 2 oeCloseCrisis (AdtCrisisID:dtCrisisID) :ptBoolean sent to indicate that a crisis should be considered as closed.
OUT 3 oeGetAlertsSet (AetAlertStatus:etAlertStatus) :ptBoolean sent to request all the ctAlert instances having a specific status.
OUT 4 oeGetCrisisSet (AetCrisisStatus:etCrisisStatus) :ptBoolean sent to request all the ctCrisis instances having a specific status.
OUT 5 oeSetCrisisHandler (AdtCrisisID:dtCrisisID) :ptBoolean sent to declare himself as been the handler of a crisis having the specified id.
OUT 6 oeReportOnCrisis (AdtCrisisID:dtCrisisID, AdtComment:dtComment) :ptBoolean sent to update the textual information available for a specific handled crisis.
OUT 7 oeSetCrisisStatus (AdtCrisisID:dtCrisisID, AetCrisisStatus:etCrisisStatus) :ptBoolean sent to define the handling status of a specific crisis.
OUT 8 oeSetCrisisType (AdtCrisisID:dtCrisisID, AetCrisisType:etCrisisType) :ptBoolean sent to define the gravity type of a specific crisis.
OUT 9 oeValidateAlert (AdtAlertID:dtAlertID) :ptBoolean sent to indicate that a specific alert is not a fake.
InputInterfaces
IN 1 ieSendAnAlert (ActAlert:ctAlert) :ptBoolean allows for receiving a requested ctAlert instance.
IN 2 ieSendACrisis (ActCrisis:ctCrisis) :ptBoolean allows for receiving a requested ctCrisis instance.

3.7.6 actHospital Actor

3.7.7 `actMsrCreator` Actor

ACTOR	
<i>actMsrCreator</i>	Represents the creator stakeholder in charge of state and environment initialization.
<i>OutputInterfaces</i>	
OUT 1 oeCreateSystemAndEnvironment (AqtyComCompanies :ptInteger) :ptBoolean	sent to request the initialization of the system's class instances and the environment actors instances.

Chapter 4

Concept Model

4.1 PrimaryTypes-Classes

4.1.1 Local view 01

Figure 4.1 shows the local view on all the primary types class types.

4.1.2 Local view 02

Figure 4.2 shows the local view of the ctState primary type class type.

4.1.3 Local view 03

4.4 Concept Model Types Descriptions

This section provides the textual descriptions of all the types defined in the concept model and that can be part of the graphical views provided.

4.4.1 Primary types - Class types descriptions

The table below is providing comments on the graphical views given for the class types of the primary types. Type logical operations are precisely specified in the operation model.

CLASSES	
<i>ctAdministrator</i>	
used to characterize internally the entity that is responsible of administrating the <i>iCrash</i> system.	
<i>extends</i>	icrash.concepts.primarytypes.classes.ctAuthenticated
<i>operation</i>	init (Alogin:dtLogin, Apwd:dtPassword) :ptBoolean used to initialize the current object as a new instance of the ctAdministrator type.
<i>ctAlert</i>	
Used to model crisis alerts sent by any human having communication capability using communication companies belonging to the system's environment	
<i>attribute</i>	comment: dtComment a textual description providing unstructured information on the alert.
<i>attribute</i>	id: dtAlertID the alert unique identification information.
<i>attribute</i>	instant: dtDateAndTime the date and time at which the alert notification has been sent.
<i>attribute</i>	location: dtGPSLocation

continues in next page ...

... Classes table continuation

attribute	status: etAlertStatus the alert validation status
operation	init(Aid:dtAlertID, Astatus:etAlertStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment) :ptBoolean used to initialize the current object as a new instance of the ctAlert type.
operation	isSentToCoordinator(AactCoordinator:actCoordinator) :ptBoolean used to provide a given coordinator with current alert information.
ctAuthenticated	
used to model system's representation about actors that need to authenticate to access some specific functionalities.	
attribute	login: dtLogin an identifier for authentication.
attribute	pwd: dtPassword a key for authentication.
attribute	vpIsLogged: ptBoolean used to determine the access status.
operation	init(Alogin:dtLogin, Apwd:dtPassword) :ptBoolean used to initialize the current object as a new instance of the ctAuthenticated type.
ctCoordinator	
used to model system's representation about the actors that have the responsibility to handle alerts and crisis.	
extends	icrash.concepts.primarytypes.classes.ctAuthenticated
attribute	id: dtCoordinatorID a unique identification information.
operation	init(Aid:dtCoordinatorID, Alogin:dtLogin, Apwd:dtPassword) :ptBoolean used to initialize the current object as a new instance of the ctCoordinator type.
ctCrisis	
Used to model crisis that are inferred from the reception of at least one alert message. Crisis are entities that are handled by the <i>iCrash</i> system.	
attribute	comment: dtComment a textual description providing unstructured information on the crisis handling.
attribute	id: dtCrisisID the crisis unique identification information.
attribute	instant: dtDateAndTime the date and time at which the first related alert notification has been sent.
attribute	location: dtGPSLocation the position of the crisis equal by the one of the first alert received and associated to the crisis.
attribute	status: etCrisisStatus the crisis handling status.
attribute	type: etCrisisType an indication of the gravity of the crisis.
operation	handlingDelayPassed() :ptBoolean

continues in next page ...

... Classes table continuation

operation	used to determine if the crisis stood too longly in a pending status since last reminder. init (Aid:dtCrisisID, Atype:etCrisisType, Astatus:etCrisisStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment) :ptBoolean
operation	used to initialize the current object as a new instance of the ctAlert type. isAllocatedIfPossible () :ptBoolean
operation	used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled.
operation	used to provide a given coordinator with current crisis information. isSentToCoordinator (AactCoordinator:actCoordinator) :ptBoolean
operation	used to determine if the crisis stood too longly in a pending status since its creation. maxHandlingDelayPassed () :ptBoolean
<i>ctHospital</i>	
attribute	attLocation: dtGPSLocation
<i>ctHuman</i>	
	used to model system's representation about the indirect actors that has alerted of potential crisis.
attribute	id: dtPhoneNumber the number of the communication device used to send an alert to <i>iCrash</i> system.
attribute	kind: etHumanKind role with respect to the alert notified.
operation	init (Aid:dtPhoneNumber, Akind:etHumanKind) :ptBoolean init: used to initialize the current object as a new instance of the ctHuman type.
<i>ctState</i>	
	used to model the system. Each system specified using MESS1P must include a ctState class for which there is only one instance at any state of the abstract machine after creation.
attribute	clock: dtDateAndTime used to represent the system local time.
attribute	crisisReminderPeriod: dtSecond used to define the delay between two reminders after which a reminder must be sent to the administrator and to the known coordinators to encourage them to handle the crisis.
attribute	maxCrisisReminderPeriod: dtSecond used to define the maximum delay after which the crisis is randomly allocated to a coordinator if any or an alert message is sent to the administrator in order to encourage him to add coordinators.
attribute	nextValueForAlertID: dtInteger nextValueForAlertID: dtInteger: used to associate each alert declared with a unique identification value.
attribute	nextValueForCrisisID: dtInteger used to associate each crisis declared with a unique identification value.
attribute	vpLastReminder: dtDateAndTime date and time of the last reminder.
attribute	vpStarted: ptBoolean used to avoid reacting to an actor message if the system is not started (i.e. oeCreateSystemAndEnvironment not executed).

continues in next page ...

... Classes table continuation

operation	init (AnextValueForAlertID:dtInteger, AnextValueForCrisisID:dtInteger, Aclock:dtDateAndTime, AcrisisReminderPeriod:dtSecond, AmaxCrisisReminderPeriod:dtSecond, AvpLastReminder:dtDateAndTime, AvpStarted:ptBoolean) :ptBoolean
	used to initialize the current object as a new instance of the ctState type.

4.4.2 Primary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the primary types.

DATATYPES	
dtAlertID	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid alert identifiers.
dtComment	
a datatype made of a string value used to receive, store and send textual information about crisis and alerts.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid comments.
dtCoordinatorID	
A string used to identify coordinators.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid coordinators identifiers.
dtCrisisID	
A string used to identify crisis.	
extends	dtString
operation	is () :ptBoolean
	used to determine which strings are considered as valid crisis identifiers.
dtGPSLocation	
used to define coordinates of geographical positions on earth. It is defined a couple made of a latitude and a longitude.	
attribute	latitude: dtLatitude
	for the latitude part of the coordinate.
attribute	longitude: dtLongitude
	for the longitude part of the coordinate.
operation	is () :ptBoolean
	used to determine which couples are considered as valid dtGPSLocation values.
operation	isNearTo (AGPSLocation:dtGPSLocation) :ptBoolean
	used to determine if locations are considered enough close to be treated as equivalent in the application domain context.
dtHospitalID	
extends	dtString

continues in next page ...

... Datatypes table continuation

operation	is() :ptBoolean
dtLatitude	
	used to define a latitude value of a geographical positions on earth.
extends	dtReal
operation	is() :ptBoolean
	used to determine which strings are considered as valid dtLatitude.
dtLogin	
	a login string used to authentify an <i>iCrash</i> user
extends	dtString
operation	is() :ptBoolean
	used to determine which strings are considered as valid dtLogin.
dtLongitude	
	used to define a longitude value of a geographical positions on earth.
extends	dtReal
operation	is() :ptBoolean
	used to determine which strings are considered as valid dtLongitude.
dtPassword	
	a password string used to authentify an <i>iCrash</i> user
extends	dtString
operation	is() :ptBoolean
	used to determine which strings are considered as valid dtPassword.
dtPhoneNumber	
	a string used to store the phone number from the human declaring the crisis or the alert.
extends	dtString
operation	is() :ptBoolean
	used to determine which strings are considered as valid dtPhoneNumber.
dtQtyVictims	
extends	dtInteger
operation	is() :ptBoolean

ENUMERATIONS

etAlertStatus
this type is used to indicate the different validation status of an alert.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.
etCrisisStatus
this type is used to indicate the different handling status of a crisis.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.
etCrisisType
this type is used to indicate the different types of a crisis.
operation is() :ptBoolean
used to determine which litteral belongs to the enumeration.

continues in next page ...

... Enumerations table continuation

<i>etHumanKind</i>	this type is used to indicate the kind of human that informs about a car crash crisis.
operation <i>is () :ptBoolean</i>	used to determine which litteral belongs to the enumeration.
<i>etSeverity</i>	
operation <i>is () :ptBoolean</i>	

4.4.3 Primary types - Association types descriptions

The table below is providing comments on the association types of the primary types.

ASSOCIATIONS
<i>assctAlertctCrisis</i> a crisis is related to one or more alerts as the alerts judged to concern all the same crisis due to their location. An alert alerts exactly one crisis.
<i>assctAlertctHuman</i> alerts are notified by human through the communication company. We need to keep an internal representation of those human to allow for communication of alert handling.
<i>assctAuthenticatedactAuthenticated</i> mainly used to determine if the login request of an authenticated actor can be granted based on the given credentials and the registered ones.
<i>assctCoordinatoractCoordinator</i> frequent messages must be sent to coordinator especially in relation to crisis they handle.
<i>assctCrisisctCoordinator</i> at any point in time we need to know if a coordinator is handling existing crisis or not.
<i>assctHumanactComCompany</i> in order to communicate with humans who informed about potential crisis, we need to record the communication company to use to send them messages.

4.4.4 Primary types - Aggregation types descriptions

There are no aggregation types for the primary types.

4.4.4.1 Primary types - Composition types descriptions

There are no composition types for the primary types.

4.4.5 Secondary types - Class types descriptions

There are no elements in this category in the system analysed.

4.4.6 Secondary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the secondary types.

DATATYPES	
<i>dtSMS</i>	
	a datatype made of a string value used to send textual information to human mobile devices.
attribute	value: ptString the textual information.
operation	is() :ptBoolean used to determine which strings are considered as valid comments.

4.4.7 Secondary types - Association types descriptions

There are no association types for the secondary types.

4.4.8 Secondary types - Aggregation types descriptions

There are no aggregation types for the secondary types.

4.4.9 Secondary types - Composition types descriptions

There are no composition types for the secondary types.

Chapter 5

Operation Model

This section contains the operation schemes of each operation defined in either an actor, its output interface, in a primary or secondary type (class, datatype or enumeration types). The **Messir** OCL code listing is joined to the comment table.

5.1 Environment - Out Interface Operation Scheme for actActivator

5.1.1 Operation Model for oeSetClock

The oeSetClock operation has the following properties:

OPERATION	
<i>oeSetClock[proactive]</i>	
An active message used to statically set the date and time information in the system's state.	
Parameters	
1	AcurentClock: dtDateAndTime the date and time to be considered as the actual one.
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is supposed to be created and initialized and the provided date and time value is greater than the one known by the system.
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the ctState instance post-state is updated to have its clock attribute equal to the given date and time.
Post-Condition (protocol)	
PostP 1	none

5.1.2 Operation Model for oeSollicitateCrisisHandling

The oeSollicitateCrisisHandling operation has the following properties:

OPERATION	
<i>oeSollicitateCrisisHandling[proactive]</i>	
<i>continues in next page ...</i>	

... Operation table continuation

A proactive message (message of a pro-active actor with no parameter triggered automatically if the pre protocol condition is true) used to avoid crisis to stay too long in an not handled status.

Return type
ptBoolean
Pre-Condition (protocol)
PreP 1 the system is started
PreP 2 there exist some crisis that are in pending status and for which the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration.
Pre-Condition (functional)
PreF 1 none
Post-Condition (functional)
PostF 1 if there exist coordinators and crisis who stood in a not handled status more than the maximum allowed time then those crisis are randomly allocated to the existing coordinators.
PostF 2 for all other crisis who stood too longly in a not handled status but not more than the maximum delay allowed then a reminder message is sent to the administrator and all coordinator actors of the environment to sollicitate handling of those crisis.
Post-Condition (protocol)
PostP 1 the value of the last reminder known by the system at post state is the system's clock value.

Figure 5.1 shows concept model elements in the scope of the oeSollicitateCrisisHandling operation

5.2 Environment - Out Interface Operation Scheme for actAdministrator

5.2.1 Operation Model for oeAddCoordinator

The oeAddCoordinator operation has the following properties:

OPERATION
oeAddCoordinator
sent to add a new coordinator in the system's post state and environment's post state.
Parameters
1 AdtCoordinatorID: dtCoordinatorID used to initialize the id field
2 AdtLogin: dtLogin used to initialize the login field
3 AdtPassword: dtPassword used to initialize the password field
Return type
ptBoolean
Pre-Condition (protocol)
PreP 1 the system is started
PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)

continues in next page ...

...Operation table continuation

Pre-Condition (functional)	
PreF 1	it is supposed that there cannot exist a ctCoordinator instance with the same id attribute as the one the administrator wants to delete.
Post-Condition (functional)	
PostF 1	the environment has a new instance of coordinator actor allowing for input/output message communication with the system.
PostF 2	the system's state has a new instance of ctCoordinator initialized with the given values.
PostF 3	the new actor instance and ctCoordinator instance are related.
PostF 4	the new actor instance and ctCoordinator instance are related according to the authenticated association.
PostF 5	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

5.2.2 Operation Model for oeDeleteCoordinator

The oeDeleteCoordinator operation has the following properties:

OPERATION	
oeDeleteCoordinator	
sent to delete an existing coordinator in the system's post state and environment's post state.	
Parameters	
1	AdtCoordinatorID: dtCoordinatorID used for ctCoordinator instance retrieval
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctCoordinator instance with the same id attribute than the one the administrator wants to create.
Post-Condition (functional)	
PostF 1	the ctCoordinator class instance having the required id do not belong anymore to the post state as well as is related actCoordinator actor instance.
PostF 2	the administrator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

5.3 Environment - Out Interface Operation Scheme for actAuthenticated**5.3.1 Operation Model for oeLogin**

The oeLogin operation has the following properties:

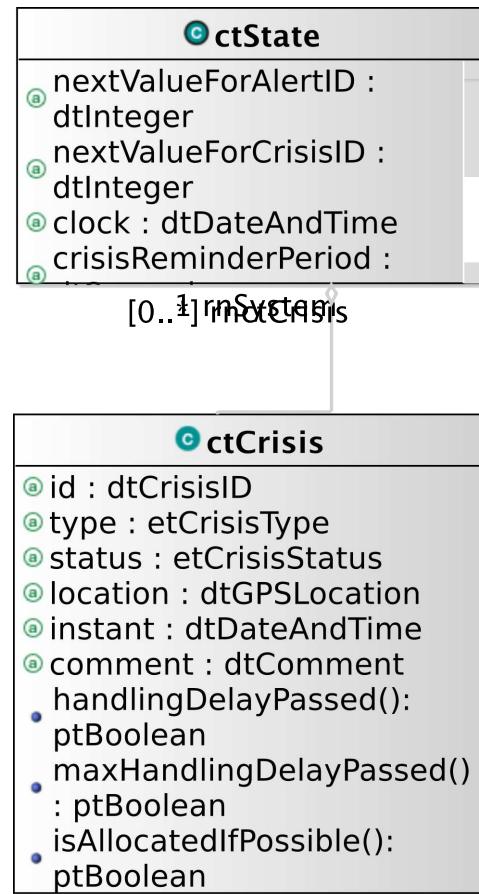

Figure 5.1: oeSollicitateCrisisHandling operation scope

OPERATION	
<i>oeLogin</i>	
sent to request authorization to request access secured system operations.	
Parameters	
1	AdtLogin: dtLogin first information used to determine accessibility rights for the actual actor.
2	AdtPassword: dtPassword second information used to determine accessibility rights for the actual actor.
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is not already logged in ! (i.e. the associated ctAuthenticated instance is not considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	if the login and password provided by the actor correspond to the ones that belong to the ctAuthenticated instance he is related to then a welcome message is sent to the actor (n.b. the logged status is changed as a post-protocol condition); else the actor is notified that he gave incorrect data and all the administrator actors existing in the environment are notified of an intrusion attempt.
Post-Condition (protocol)	
PostP 1	if the authentication information is correct then the actor is known to be logged in ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged)

5.3.2 Operation Model for oeLogout

The oeLogout operation has the following properties:

OPERATION	
<i>oeLogout</i>	
sent to end the secured access to specific system operations.	
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor is currently logged in ! (i.e. the associated ctAuthenticated instance is considered logged)
Pre-Condition (functional)	
PreF 1	
Post-Condition (functional)	
PostF 1	a logout confirmation message is sent to the actor (n.b. the logged status is changed as a post-protocol condition)
Post-Condition (protocol)	
PostP 1	the actor is known to be logged out ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged out)

5.4 Environment - Out Interface Operation Scheme for actComCompany

5.4.1 Operation Model for oeAlert

The oeAlert operation has the following properties:

OPERATION	
<i>oeAlert</i>	
Any human having a phone able to connect to the communication companies using the <i>iCrash</i> system can send his company an sms message with structured information in order to declare an alert.	
<i>Parameters</i>	
1	AetHumanKind: etHumanKind the kind of human informing of an alert.
2	AdtDate: dtDate the date of the alert
3	AdtTime: dtTime the time of the alert
4	AdtPhoneNumber: dtPhoneNumber the phone number of the human sending the alert SMS message
5	AdtGPSLocation: dtGPSLocation the GPS position of the phone at the date and time the message was sent.
6	AdtComment: dtComment a free text message sent by the human providing information on the alert that he wants to declare
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is supposed to be created and initialized.
<i>Pre-Condition (functional)</i>	
PreF 1	the date and time the alert is declared is supposed to be in the past with respect to the current time known by the system.
<i>Post-Condition (functional)</i>	
PostF 1	the ctState attribute for the next value for alert IDs is incremented by one at post.
PostF 2	a new alert instance exists in the post state with status pending, instant information (resp. GPS location and comment) based on date and time provided (resp. position and comment); and with alert ID being a string conversion of the dtInteger value available in the pre state in the ctState instance.
PostF 3	if there exist no already registered alert near to the alert currently declared then a new crisis is added in the post state and initialized with: its ID being the one provided by the ctState instance (which is incremented by one in the post state), its type considered as small, its status being pending, its declared time being the same than the alert and a default comment indicating that a report will come later on. else the crisis to which the new alert must be related to is the one related to any alert nearby in the pre-state.
PostF 4	the post state relates the new alert to the previously characterized crisis.
PostF 5	if there is no ctHuman instance having same phone number and same kind in the pre-state then a new one is added in the post-state with given phone number and kind and is associated to the communication company actor used to declare the alert. else the pre-state one is chosen

continues in next page ...

... Operation table continuation

PostF 6	and this specified ctHuman is related to the new alert thus indicating he has signed the alert.
Post-Condition (protocol)	
PostP 1	none

Figure 5.2 shows concept model elements in the scope of the oeAlert operation

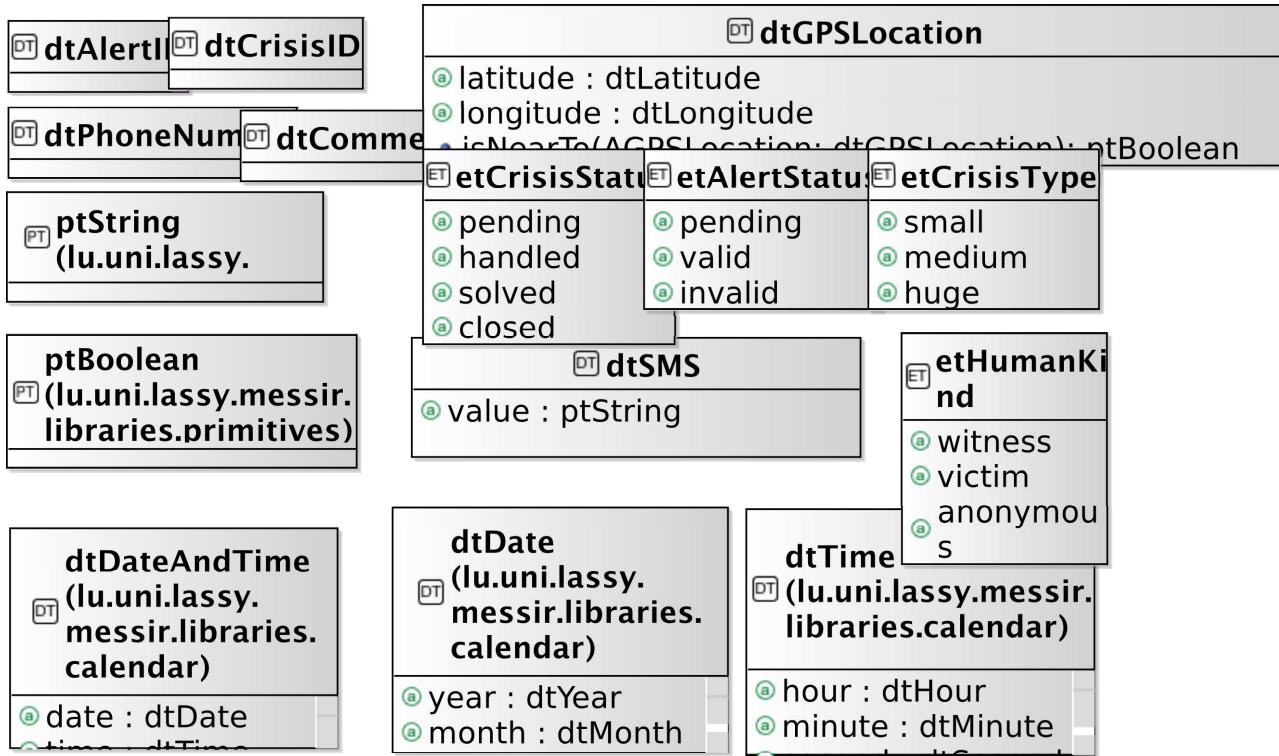

Figure 5.2: oeAlert operation scope

Figure 5.3 shows concept model elements in the scope of the oeAlert operation

5.5 Environment - Out Interface Operation Scheme for actCoordinator

5.5.1 Operation Model for oeCloseCrisis

The **oeCloseCrisis** operation has the following properties:

OPERATION
oeCloseCrisis
sent to indicate that a crisis should be considered as closed.
Parameters

continues in next page ...

... Operation table continuation

1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis to close
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1 the system is started PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)	
<i>Pre-Condition (functional)</i>	
PreF 1 it is supposed that there exist one ctCrisis instance with the same id attribute value as the one provided by the coordinator actor who wants to close.	
<i>Post-Condition (functional)</i>	
PostF 1 the ctCrisis class instance having the provided id is considered closed in the post state. PostF 2 There is no handler declared in the system as associated to the crisis. PostF 3 all the alert instances associated to this crisis do not belong any more to the system's post state. PostF 4 the coordinator actor is informed about the satisfaction of its request.	
<i>Post-Condition (protocol)</i>	
PostP 1 none	

5.5.2 Operation Model for oeGetAlertsSet

The oeGetAlertsSet operation has the following properties:

OPERATION
oeGetAlertsSet
sent to request all the ctAlert instances having a specific status.
<i>Parameters</i>
1 AetAlertStatus: etAlertStatus the criteria used to select the alerts to send back to the actor
<i>Return type</i>
ptBoolean
<i>Pre-Condition (protocol)</i>
PreP 1 the system is started PreP 2 the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>
PreF 1 none
<i>Post-Condition (functional)</i>
PostF 1 the post state is the one obtained by satisfying the isSentToCoordinator predicate for each alert having the provided status and for the actor sending the message. (cf. specification of isSentToCoordinator predicate given for the ctAlert type).
<i>Post-Condition (protocol)</i>
PostP 1 none

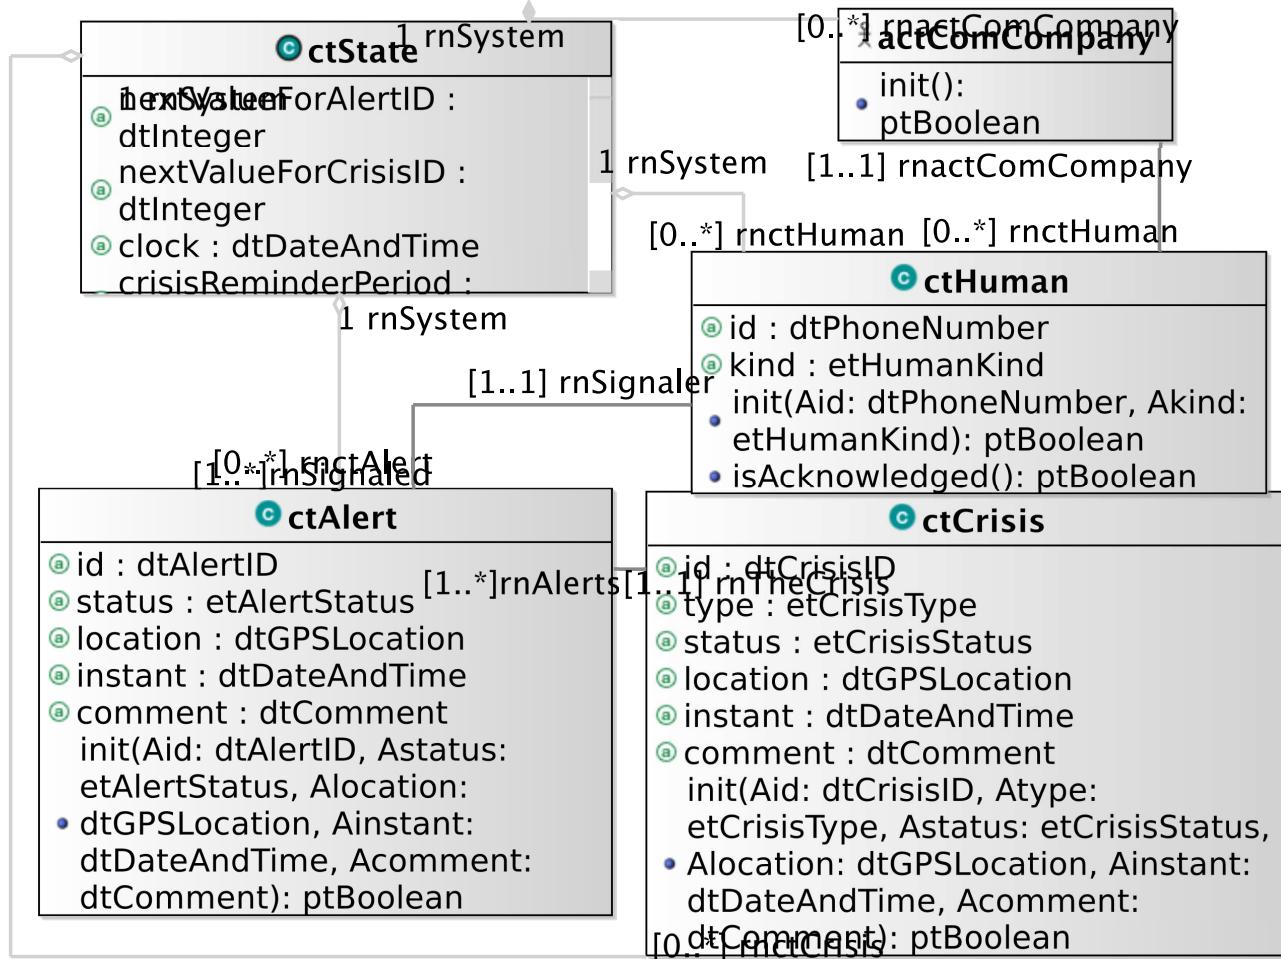

Figure 5.3: oeAlert operation scope

5.5.3 Operation Model for oeGetCrisisSet

The `oeGetCrisisSet` operation has the following properties:

OPERATION	
<i>oeGetCrisisSet</i>	
sent to request all the <code>ctCrisis</code> instances having a specific status.	
Parameters	
1	AetCrisisStatus: etCrisisStatus the status information used to determine the crisis to send back to the actor
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated <code>ctCoordinator</code> instance is considered logged)
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	
PostF 1	the post state is the one obtained by satisfying the <code>isSentToCoordinator</code> predicate for each crisis having the provided status and for the actor sending the message <code>ieSendACrisis</code> . (cf. specification of <code>isSentToCoordinator</code> predicate given for the <code>ctCrisis</code> type.)
Post-Condition (protocol)	
PostP 1	none

5.5.4 Operation Model for oeInvalidateAlert

The `oeInvalidateAlert` operation has the following properties:

OPERATION	
<i>oeInvalidateAlert</i>	
sent to indicate that an alert should be considered as closed.	
Parameters	
1	AdtAlertID: dtAlertID the identification information used to determine the alert to close
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated <code>ctCoordinator</code> instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one <code>ctAlert</code> instance with the same <code>id</code> attribute value as the one provided by the coordinator actor who wants to close.
Post-Condition (functional)	
PostF 1	the <code>ctAlert</code> class instance having the provided id is considered closed in the post state.
PostF 2	the coordinator actor is informed about the satisfaction of its request.

... Operation table continuation

<i>Post-Condition (protocol)</i>	
PostP 1	none

5.5.5 Operation Model for oeReportOnCrisis

The `oeReportOnCrisis` operation has the following properties:

OPERATION	
<i>oeReportOnCrisis</i>	
sent to update the textual information available for a specific handled crisis.	
<i>Parameters</i>	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis to report on
2	AdtComment: dtComment the textual information commenting the crisis
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>	
PreF 1	it is supposed that there exist one crisis in the pre state having the given id.
<i>Post-Condition (functional)</i>	
PostF 1	the comment attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update.
<i>Post-Condition (protocol)</i>	
PostP 1	none

5.5.6 Operation Model for oeSendHospitalInfo

The `oeSendHospitalInfo` operation has the following properties:

OPERATION	
<i>oeSendHospitalInfo</i>	
<i>Parameters</i>	
1	AdtGPSLocation: dtGPSLocation
2	AdtQtyVictims: dtQtyVictims
3	AetSeverity: etSeverity
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	

continues in next page ...

... Operation table continuation

PreP 1
<i>Pre-Condition (functional)</i>
PreF 1
<i>Post-Condition (functional)</i>
PostF 1
<i>Post-Condition (protocol)</i>
PostP 1

5.5.7 Operation Model for oeSetCrisisHandler

The `oeSetCrisisHandler` operation has the following properties:

OPERATION	
<i>oeSetCrisisHandler</i>	
sent to declare himself as been the handler of a crisis having the specified id.	
<i>Parameters</i>	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>	
PreF 1	there exist one crisis having the given id in the pre-state.
<i>Post-Condition (functional)</i>	
PostF 1	the ctCrisis instance having the provided id is in handled status at poststate and is associated to the actor that sends the message (which himself is notified with a textual message as confirmation).
PostF 2	All the alerts related to this crisis are sent to the actor such that he can decide how to handle them.
PostF 3	if the crisis was already handled at pre-state then the associated handler actor is notified about the change of handler for one of his crisis (n.b. it might be the same even if not relevant).
PostF 4	a message is sent to the communication company for any human related to an alert associated to the crisis. A human will receive as many messages as alerts he sent despite the fact that they might relate to the same crisis (i.e. one alert, one acknowledgement).
<i>Post-Condition (protocol)</i>	
PostP 1	none

5.5.8 Operation Model for oeSetCrisisStatus

The `oeSetCrisisStatus` operation has the following properties:

OPERATION
<i>continues in next page ...</i>

... Operation table continuation

<i>oeSetCrisisStatus</i>	
sent to define the handling status of a specific crisis.	
<i>Parameters</i>	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis
2	AetCrisisStatus: etCrisisStatus the new status value
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>	
PreF 1	it is supposed that there exist one crisis in the pre state having the given id.
<i>Post-Condition (functional)</i>	
PostF 1	the crisis status attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update.
<i>Post-Condition (protocol)</i>	
PostP 1	none

5.5.9 Operation Model for oeSetCrisisType

The `oeSetCrisisType` operation has the following properties:

OPERATION	
<i>oeSetCrisisType</i>	
sent to define the gravity type of a specific crisis.	
<i>Parameters</i>	
1	AdtCrisisID: dtCrisisID the identification information used to determine the crisis
2	AetCrisisType: etCrisisType the new type value
<i>Return type</i>	
ptBoolean	
<i>Pre-Condition (protocol)</i>	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
<i>Pre-Condition (functional)</i>	
PreF 1	it is supposed that there exist one crisis in the pre state having the given id.
<i>Post-Condition (functional)</i>	
PostF 1	the crisis type attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update.
<i>Post-Condition (protocol)</i>	
PostP 1	none

5.5.10 Operation Model for oeValidateAlert

The oeValidateAlert operation has the following properties:

OPERATION	
<i>oeValidateAlert</i>	
sent to indicate that a specific alert is not a fake.	
Parameters	
1	AdtAlertID: dtAlertID the identification information used to determine the alert instance
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	the system is started
PreP 2	the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged)
Pre-Condition (functional)	
PreF 1	it is supposed that there exist one ctAlert instance with the same id attribute value as the one provided by the coordinator actor who wants to validate.
Post-Condition (functional)	
PostF 1	the ctAlert class instance having the provided id is considered as valid in the post state and the coordinator actor is informed about the satisfaction of its request.
Post-Condition (protocol)	
PostP 1	none

5.6 Environment - Out Interface Operation Scheme for actMsrCreator

5.6.1 Operation Model for oeCreateSystemAndEnvironment

The oeCreateSystemAndEnvironment operation has the following properties:

OPERATION	
<i>oeCreateSystemAndEnvironment</i>	
sent to request the initialization of the system's class instances and the environment actors instances.	
Parameters	
1	AqtyComCompanies: ptInteger the quantity of communication companies to create in the environment
Return type	
ptBoolean	
Pre-Condition (protocol)	
PreP 1	none
Pre-Condition (functional)	
PreF 1	none
Post-Condition (functional)	

continues in next page ...

...Operation table continuation

PostF 1	the ctState instance is initialized with the integer 1 for the crisis and alert counters used for their identifications, a value for the clock corresponding to a default initial time (i.e. January 1st, 1970) the crisis reminder period is set to 300 seconds, the maximum crisis reminder period is fixed to 1200 seconds (i.e. 20 minutes), an initial value for the automatic reminder period equal to the current date and time and the system is considered in a started state. Those predicates must be satisfied first since all the other depend on the existence of a ctState instance !
PostF 2	the actMsrCreator actor instance is initiated (remember that since the oeCreateSystemAndEnvironment is a special event its role is to make consistent the post state thus creating the actor and its interfaces is required even though the sending of this message logically would need the actor and its interfaces to already exist ...).
PostF 3	the environment for communication company actors, in the post state, is made of AqtyComCompanies instances allowing for receiving and sending messages to humans.
PostF 4	the environment for administrator actors, in the post state, is made of one instance.
PostF 5	the environment for activator actors, in the post state, is made of one instance allowing for automatic message sending based on current system's and environment state'.
PostF 6	the set of ctAdministrator instances at post is made of one instance initialized with 'icrashadmin' (resp. '7WXC1359') for login (resp. password) values.
PostF 7	the association between ctAdministrator and actAdministrator is made of one couple made of the conjointly specified instances.

Post-Condition (protocol)

PostP 1	none is given since the only protocol variable to be modified in the post state is the one initialized with the ctState instance (i.e. vpStarted).
---------	--

Figure 5.4 shows all the concept model elements in the scope of the oeCreateSystemAndEnvironment operation

5.7 Environment - Actor Operation Scheme for actMsrCreator

5.7.1 Operation Model for init

The init operation has the following properties:

OPERATION
<i>init</i>
used to create an instance of the actor together with its interface instances and update the associations with the ctState instance.
<i>Return type</i>
ptBoolean

5.8 Primary Types - Operation Schemes for Class ctAdministrator

5.8.1 Operation Model for init

The init operation has the following properties:

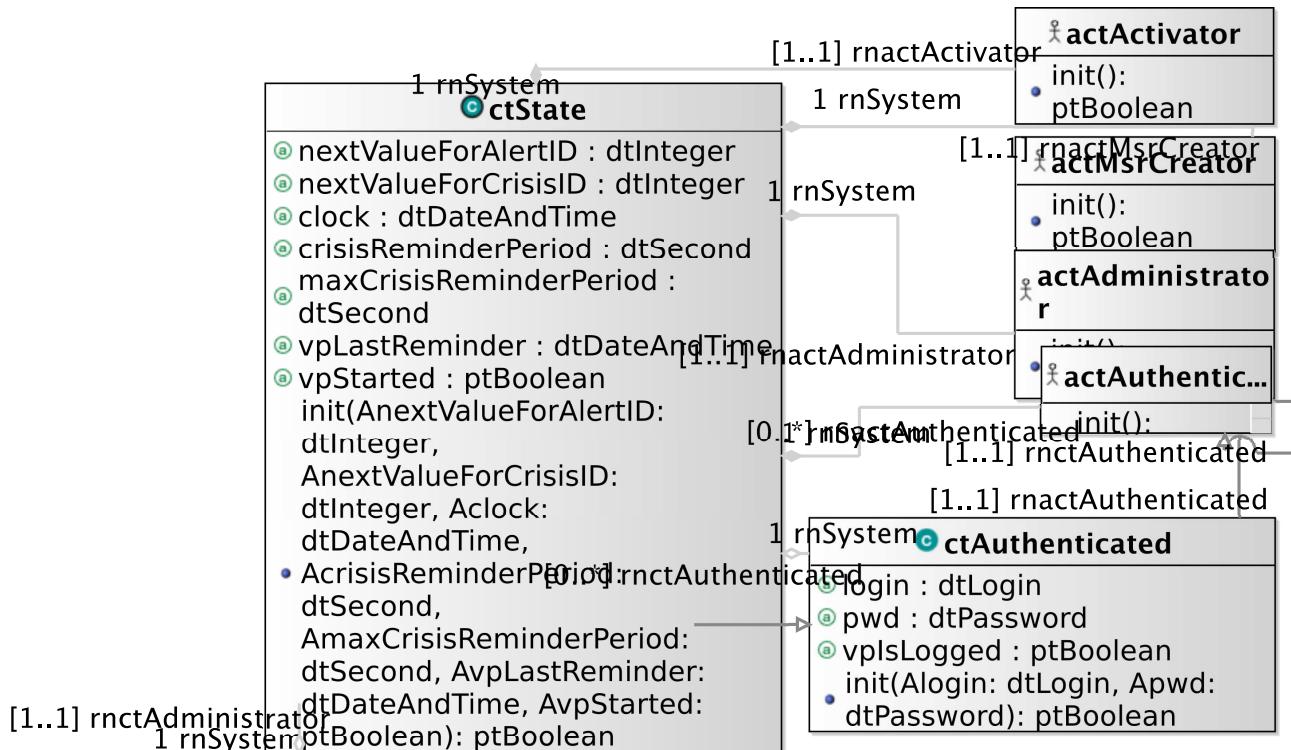

Figure 5.4: oeCreateSystemAndEnvironment operation scope

OPERATION	
<i>init</i>	used to initialize the current object as a new instance of the ctAdministrator type.
<i>Parameters</i>	
1 Alogin: dtLogin	used to initialize the login field
2 Apwd: dtPassword	used to initialize the password field
<i>Return type</i>	ptBoolean
<i>Post-Condition (functional)</i>	PostF 1 true iff the system poststate includes the current object as a new ctAdministrator instance having its login and password attributes equal to the one provided as parameters and its vpIsLogged attribute equal to false.

5.9 Primary Types - Operation Schemes for Class ctAlert

5.9.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	used to initialize the current object as a new instance of the ctAlert type.
<i>Parameters</i>	
1 Aid: dtAlertID	used to initialize the id field
2 Astatus: etAlertStatus	used to initialize the status field

...Operation table continuation

<i>Parameters</i>	
1	AactCoordinator: actCoordinator the message destination
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1	true iff the message ieSendAnAlert is sent to the input interface of the given coordinator actor with the current alert as parameter value.

5.10 Primary Types - Operation Schemes for Class ctAuthenticated

5.10.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	
used to initialize the current object as a new instance of the <code>ctAuthenticated</code> type.	
<i>Parameters</i>	
1	Alogin: dtLogin used to initialize the login field
2	Apwd: dtPassword used to initialize the password field
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1	true iff the system poststate includes the current object as a new <code>ctAuthenticated</code> instance having its attributes equal to the ones provided as parameters.

5.11 Primary Types - Operation Schemes for Class ctCoordinator

5.11.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	
used to initialize the current object as a new instance of the <code>ctCoordinator</code> type.	
<i>Parameters</i>	
1	Aid: dtCoordinatorID used to initialize the id field
2	Alogin: dtLogin used to initialize the login field
3	Apwd: dtPassword used to initialize the password field
<i>Return type</i>	

continues in next page ...

... Operation table continuation

ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1	true iff the system poststate includes the current object as a new ctCoordinator instance having its attributes equal to the ones provided as parameters.

5.12 Primary Types - Operation Schemes for Class ctCrisis

5.12.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	
used to initialize the current object as a new instance of the ctCrisis type.	
<i>Parameters</i>	
1 Aid: dtCrisisID used to initialize the id field	
2 Atype: etCrisisType used to initialize the type field	
3 Astatus: etCrisisStatus used to initialize the status field	
4 Alocation: dtGPSLocation used to initialize the location field	
5 Ainstant: dtDateAndTime used to initialize the instant field	
6 Acomment: dtComment used to initialize the comment field	
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1 true iff the system poststate includes the current object as a new ctCrisis instance having its attributes equal to the ones provided as parameters.	

5.12.2 Operation Model for handlingDelayPassed

The `handlingDelayPassed` operation has the following properties:

OPERATION	
<i>handlingDelayPassed</i>	
used to determine if the crisis stood too longly in a pending status since last reminder.	
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1 true iff the crisis is in pending status and if the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration.	

5.12.3 Operation Model for maxHandlingDelayPassed

The `maxHandlingDelayPassed` operation has the following properties:

OPERATION
<i>maxHandlingDelayPassed</i>
used to determine if the crisis stood too longly in a pending status since its creation.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the crisis is in pending status and if the duration between the current ctState clock information and the crisis instant is greater than the maximum reminder period duration.

5.12.4 Operation Model for isSentToCoordinator

The `isSentToCoordinator` operation has the following properties:

OPERATION
<i>isSentToCoordinator</i>
used to provide a given coordinator with current crisis information.
<i>Parameters</i>
1 AactCoordinator: actCoordinator the message destination actor
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the message ieSendACrisis is sent by the simulator to the input interface of the given coordinator actor with the current crisis as parameter value.

5.12.5 Operation Model for isAllocatedIfPossible

The `isAllocatedIfPossible` operation has the following properties:

OPERATION
<i>isAllocatedIfPossible</i>
used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the duration between the crisis creation and the system's clock is greater than the maximum delay defined and
PostF 2 if there exist at least one coordinator then (a) the post state associates to the crisis any of the existing coordinators and (b) the coordinator is informed that he is now the handlers of the crisis whose ID is communicated
PostF 3 else a message is sent to all known administrators to request creation of new coordinators.

5.13 Primary Types - Operation Schemes for Class ctHuman

5.13.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	
used to initialize the current object as a new instance of the <code>ctHuman</code> type.	
<i>Parameters</i>	
1	Aid: dtPhoneNumber used to initialize the <code>id</code> field
2	Akind: etHumanKind used to initialize the <code>kind</code> field
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1	true iff the system poststate includes the current object as a new <code>ctHuman</code> instance having its attributes equal to the ones provided as parameters.

5.13.2 Operation Model for isAcknowledged

The `isAcknowledged` operation has the following properties:

OPERATION	
<i>isAcknowledged</i>	
used to specify the property of having sent an alert acknowledge message to the human having declared the alert through its own communication company.	
<i>Return type</i>	
ptBoolean	
<i>Post-Condition (functional)</i>	
PostF 1	true iff the message <code>ieSmsSend</code> is sent to the related input interface of the related communication company actor with the human phone number and the generic message 'The handling of your alert by our services is in progress !'

5.14 Primary Types - Operation Schemes for Class ctState

5.14.1 Operation Model for init

The `init` operation has the following properties:

OPERATION	
<i>init</i>	
used to initialize the current object as a new instance of the <code>ctState</code> type.	
<i>Parameters</i>	
1	AnextValueForAlertID: dtInteger used to initialize the <code>nextValueForAlertID</code> field
2	AnextValueForCrisisID: dtInteger

continues in next page ...

...Operation table continuation

	used to initialize the nextValueForCrisisID field
3	Aclock: dtDateAndTime used to initialize the clock field
4	AcrisisReminderPeriod: dtSecond used to initialize the crisisReminderPeriod field
5	AmaxCrisisReminderPeriod: dtSecond used to initialize the maxCrisisReminderPeriod field
6	AvpLastReminder: dtDateAndTime used to initialize the vpLastReminder field
7	AvpStarted: ptBoolean used to initialize the vpStarted field
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	true iff the system poststate includes the current object as a new ctState instance having its attributes equal to the ones provided as parameters.

5.15 Primary Types - Operation Schemes for Datatype dtAlertID

5.15.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
is
used to determine which strings are considered as valid alert identifiers.
Return type
ptBoolean
Post-Condition (functional)
PostF 1 if the length of the value attribute of a dtAlertID is a ptInteger greater than zero and lower or equal to 20 then the operation returns the ptBoolean true, else the ptBoolean false.

5.16 Primary Types - Operation Schemes for Datatype dtComment

5.16.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
is
used to determine which strings are considered as valid comments.
Return type
ptBoolean
Post-Condition (functional)
PostF 1 true iff the length of the string value is not more than 160 characters.

5.17 Primary Types - Operation Schemes for Datatype dtCoordinatorID

5.17.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which string are considered as valid alert identifiers.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 if the length of the value attribute of a <code>dtCoordinatorID</code> is a <code>ptInteger</code> greater than zero and lower or equal to 5 than the operation returns the <code>ptBoolean</code> true, else the <code>ptBoolean</code> false.

5.18 Primary Types - Operation Schemes for Datatype dtCrisisID

5.18.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which strings are considered as valid crisis identifiers.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 if the length of the value attribute of a <code>dtCrisisID</code> is a <code>ptInteger</code> greater than zero and lower or equal to 10 than the operation returns the <code>ptBoolean</code> true, else the <code>ptBoolean</code> false.

5.19 Primary Types - Operation Schemes for Datatype dtGPSLocation

5.19.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which couples are considered as valid <code>dtGPSLocation</code> values.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true if both latitude and longitude are valid values according to their <code>is</code> operation.

5.19.2 Operation Model for isNearTo

The `isNearTo` operation has the following properties:

OPERATION	
<i>isNearTo</i>	
used to determine if locations are considered enough close to be treated as equivalent in the application domain context. In the context of the iCrash system, we compute the distance between two GPS locations using the following Haversine formula. (more details can be found at: http://www.movable-type.co.uk/scripts/latlong.html and http://www.gpsvisualizer.com/calculators#distance)	
Parameters	
1	AGPSLocation: dtGPSLocation the GPS location to be compared to.
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	if the Haversine formula $(ACOS(SIN(lat1)*SIN(lat2)+COS(lat1)*COS(lat2)*COS(lon2-lon1)) * 6371$, in which latitudes and longitudes are in radians applied to the two dtGPS coordinates is lower to 100 meters) then the predicate is true and false otherwise.

5.20 Primary Types - Operation Schemes for Datatype dtLatitude

5.20.1 Operation Model for is

The `is` operation has the following properties:

OPERATION	
<i>is</i>	
used to determine which strings are considered as valid dtLatitude.	
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	is true if the value is a real in the interval [-90.0 , +90.0].

5.21 Primary Types - Operation Schemes for Datatype dtLogin

5.21.1 Operation Model for is

The `is` operation has the following properties:

OPERATION	
<i>is</i>	
used to determine which strings are considered as valid dtLogin.	
Return type	
ptBoolean	
Post-Condition (functional)	
PostF 1	is true if the length of the string value is not more than 20 characters.

5.22 Primary Types - Operation Schemes for Datatype dtLongitude

5.22.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which strings are considered as valid dtLongitude.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 is true if the value is a real in the interval [-180.0 , +180.0].

5.23 Primary Types - Operation Schemes for Datatype dtPassword

5.23.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which strings are considered as valid dtPassword.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 is true of the length of the string value is at least 6 characters long.

5.24 Primary Types - Operation Schemes for Datatype dtPhoneNumber

5.24.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which strings are considered as valid dtPhoneNumber.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 is true of the length of the string value is from 4 to 30 characters. No standard is applied !

5.25 Primary Types - Operation Schemes for Enumeration etAlertStatus

5.25.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which litteral belongs to the enumeration.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the value is equal to one of the following values: pending, valid, invalid

5.26 Primary Types - Operation Schemes for Enumeration etCrisisStatus

5.26.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which litteral belongs to the enumeration.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the value is equal to one of the following values: pending, handled, solved, closed.

5.27 Primary Types - Operation Schemes for Enumeration etCrisisType

5.27.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which litteral belongs to the enumeration.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the value is equal to one of the following values: small, medium, huge

5.28 Primary Types - Operation Schemes for Enumeration etHumanKind

5.28.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which litteral belongs to the enumeration.
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the value is equal to one of the following values: <code>witness</code> , <code>victim</code> , <code>anonym</code>

5.29 Secondary Types - Operation Schemes for Classes

There are no elements in this category in the system analysed.

5.30 Secondary Types - Operation Schemes for Datatype dtSMS

5.30.1 Operation Model for is

The `is` operation has the following properties:

OPERATION
<i>is</i>
used to determine which strings are considered as valid comments
<i>Return type</i>
ptBoolean
<i>Post-Condition (functional)</i>
PostF 1 true iff the length of the string value is not more than 160 characters.

5.31 Secondary Types - Operation Schemes for Enumerations

There are no elements in this category in the system analysed.

Chapter 6

Test Model(s)

6.1 Test Model for testcase01

this positive test case intends to verify the correctness of the execution of a simple instance of the suDeployAndRun use case.

6.1.1 Test Steps Specification

6.1.1.1 testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreateSy

The testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreateSy has the following properties:

TEST STEP	
<i>ts01oeCreateSystemAndEnvironment</i>	
This test step initializes the system state and environment.	
<i>Test Sent Message</i>	
TSM 1	<p>out:Creator</p> <p>sends to system</p> <p>actMsrCreator.outactMsrCreator.oeCreateSystemAndEnvironment (AqtyComCompanies)</p>
<i>Variables</i>	
V 1	Creator:icrash.environment.actMsrCreator only actMsrtCreator actors can trigger the system and environment creation and initialization.
<i>Constraints</i>	
C 1	the number of communication company actor instances present in the environment is equal to four to represent all the communication companies available in Luxembourg.
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

6.1.1.2 testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock

The testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock has the following properties:

TEST STEP	
<i>ts02oeSetClock</i>	
test the update of the current time.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actActivator.outactActivator.oeSetClock (ACurrentClock)</p>
<i>Variables</i>	
V 1	<p>TheActor:actActivator</p> <p>proactive actor responsible of requesting the update of the system's clock.</p>
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status.
C 2	ACurrentClock is a fixed date equal to the 24th November 2017 at 15:20:00 using a 24-hours notation ¹ .
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

6.1.1.3 testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin

The testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin has the following properties:

TEST STEP	
<i>ts03oeLogin</i>	
test the authentified access of the administrator	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actAdministrator.outactAdministrator.oeLogin (AdtLogin, AdtPassword)</p>
<i>Variables</i>	
V 1	<p>TheActor:actAdministrator</p> <p>an actAdministrator actor as subtype of actAuthenticated can send oeLogin messages to the system.</p>
<i>Constraints</i>	

continues in next page ...

¹for more details see the ISO 8601 Data elements and interchange formats - Information interchange - Representation of dates and times - <http://www.iso.org/iso/home/standards/iso8601.htm>

... Test Step table continuation

C 1	TheActor is any <code>actAdministrator</code> instance existing in the environment. It is thus expected that there exist at least one.
C 2	<code>AdtLogin</code> has its value attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.)
C 3	<code>AdtPassword</code> has its value attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.)
Oracle Constraints	
OC 1	the <code>AMessage</code> value is expected to be equal to the primitive string 'You are logged ! Welcome ...'
OC 2	TheActor receives from system <code>ieMessage(AMessage)</code>

6.1.1.4 testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordinator

The `testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordinator` has the following properties:

TEST STEP	
<i>ts04oeAddCoordinator</i>	
to test the add of a new coordinator by an administrator.	
<i>Test Sent Message</i>	
TSM 1	out:TheActor sends to system actAdministrator.outactAdministrator.oeAddCoordinator (<code>AdtCoordinatorID</code> , <code>AdtLogin</code> , <code>AdtPassword</code>)
<i>Variables</i>	
V 1	TheActor:actAdministrator actAdministrator actors as being the only one allowed to add coordinators.
<i>Constraints</i>	
C 1	TheActor is any <code>actAdministrator</code> instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
C 2	<code>AdtCoordinatorID</code> is equal to 1 to set the new coordinator ID
C 3	<code>AdtLogin</code> has its value attribute equal to the primitive string 'steve' which is the ID defined for the new coordinator.
C 4	<code>AdtPassword</code> has its value attribute equal to the primitive string 'pwdMessirExcalibur2017' which is the password to be set for steve.
<i>Oracle Constraints</i>	
OC 1	the administrator should have been acknowledged for the adding of the new coordinator.

6.1.1.5 testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout

The `testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout` has the following properties:

TEST STEP	
<i>continues in next page ...</i>	

... Test Step table continuation

<i>ts05oeLogout</i> to test the logout of a connected administrator.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actAdministrator.outactAdministrator.oeLogout ()</p>
<i>Variables</i>	
V 1	TheActor:actAdministrator an actAdministrator actor as subtype of actAuthenticated can send oeLogout messages to the system.
<i>Constraints</i>	
C 1	TheActor is any actAdministrator instance existing in the environment. It is expected that there exists at least one which is the same during all the test case.
<i>Oracle Constraints</i>	
OC 1	the AMessage value is expected to be equal to the primitive string 'You are logged out ! Good Bye ...'
OC 2	the administrator should have received the message AMessage.

6.1.1.6 testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock

The testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock has the following properties:

TEST STEP	
<i>ts06oeSetClock02</i> test the update of the current time.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actActivator.outactActivator.oeSetClock (ACurrentClock)</p>
<i>Variables</i>	
V 1	TheActor:icrash.environment.actActivator proactive actors responsible of requesting the update of the system's clock.
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status.
C 2	ACurrentClock is a fixed date equal to the 26th November 2017 at 10:15:00 using a 24-hours notation.
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

6.1.1.7 testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert

The testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert has the following properties:

TEST STEP	
<i>ts07oeAlert1</i>	
tests the declaration of a new alert functionality.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actComCompany.outactComCompany.oeAlert (AetHumanKind, AdtDate, AdtTime, AdtPhoneNumber, AdtGPSLocation, AdtComment)</p>
<i>Variables</i>	
V 1	<p>TheActor:actComCompany</p> <p>actComCompany actors transfer alert declaration messages.</p>
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status. It is expected to exist at least one.
C 2	AetHumanKind is equal to witness
C 3	AdtDate is equal to the 26th of November 2017
C 4	AdtTime is equal to 10:10:16 using a 24-hours.
C 5	AdtPhoneNumber is equal to the ptString value '+3524666445252'.
C 6	AdtGPSLocation is equal to (49.627675 , 6.159590).
C 7	AdtComment is equal to '3 cars involved in an accident.'
<i>Oracle Constraints</i>	
OC 1	AdtSMS is equal to the ptString 'Your alert has been registered. We will handle it and keep you informed'.
OC 2	AdtSMS is sent to the phone number AdtPhoneNumber using the communication company having sent the alert using its ieSmsSend input message.

6.1.1.8 testcase01-ts08oeSetClock03-actActivator.outactActivator.oeSetClock

The testcase01-ts08oeSetClock03-actActivator.outactActivator.oeSetClock has the following properties:

TEST STEP	
<i>ts08oeSetClock03</i>	
test the update of the current time.	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actActivator.outactActivator.oeSetClock (ACurrentClock)</p>

continues in next page ...

... Test Step table continuation

<i>Variables</i>	
V 1	TheActor:actActivator proactive actor responsible of requesting the update of the system's clock.
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status.
C 2	ACurrentClock is a fixed date equal to the 26th November 2017 at 10:30:00 using a 24-hours notation.
<i>Oracle Constraints</i>	
OC 1	true for testing only the executability (is available and can be triggered) of the operation.

6.1.1.9 testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSollicitateCrisisHandling()

The testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSollicitateCrisisHandling() has the following properties:

<i>TEST STEP</i>	
<i>ts09oeSollicitateCrisisHandling</i>	
test the proactive sollication to handle an alert.	
<i>Test Sent Message</i>	
TSM 1	out:TheActor sends to system actActivator.outactActivator.oeSollicitateCrisisHandling ()
<i>Variables</i>	
V 1	TheActor:icrash.environment.actActivator proactive actor responsible of triggering sollicitation functionality.
<i>Constraints</i>	
C 1	TheActor is any instance existing in the current environment status. It is expected to exist at least one.
<i>Oracle Variables</i>	
OV 1	TheAdministrator:actAdministrator actAdministrator actors can be sollicitated to handle alerts.
OV 2	TheCoordinator:actCoordinator actCoordinator actors can be sollicitated to handle alerts.
OV 3	AMessageForCrisisHandlers:ptString messages sent to sollicitated actors are of type ptString.
<i>Oracle Constraints</i>	
OC 1	TheAdministrator is any instance existing in the current environment status. It is expected to exist at least one.
OC 2	TheCoordinator is any instance existing in the current environment status. It is expected to exist at least one.
OC 3	AMessageForCrisisHandlers is equal to the ptString 'There are alerts pending since more than the defined delay. Please REACT !'
OC 4	TheCoordinator and TheAdministrator have received the message AMessag

6.1.1.10 testcase01-ts10oeLogin02-actAuthenticated.outactAuthenticated.oeLogin

The testcase01-ts10oeLogin02-actAuthenticated.outactAuthenticated.oeLogin has the following properties:

TEST STEP	
<i>ts10oeLogin02</i>	
test the authentified access of the coordinator	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actAuthenticated.outactAuthenticated.oeLogin (AdtLogin, AdtPassword)</p>
<i>Variables</i>	
V 1	<p>TheActor:actCoordinator</p> <p>an actCoordinator actor as subtype of actAuthenticated can send oeLogin messages to the system.</p>
<i>Constraints</i>	
C 1	TheActor is any actAdministrator instance existing in the environment. It is thus expected that there exist at least one.
C 2	AdtLogin has its value attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.)
C 3	AdtPassword has its value attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.)
<i>Oracle Constraints</i>	
OC 1	the AMessage value is expected to be equal to the primitive string 'You are logged ! Welcome ...'

6.1.1.11 testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet

The testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet has the following properties:

TEST STEP	
<i>ts11oeGetCrisisSet</i>	
cf. actor documentation	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actCoordinator.outactCoordinator.oeGetCrisisSet (AetCrisisStatus)</p>
<i>Variables</i>	
V 1	<p>TheActor:icrash.environment.actCoordinator</p> <p>cf. actor documentation</p>
V 2	<p>AetCrisisStatus:icrash.concepts.primarytypes.datatypes.etCrisisStatus</p> <p><i>continues in next page ...</i></p>

... Test Step table continuation

V 3	cf. actor documentation ActCrisis:icrash.concepts.primarytypes.classes.ctCrisis cf. actor documentation
Constraints	
C 1	TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value
C 2	AetCrisisStatus value is pending
Oracle Constraints	
OC 1	ActCrisis is any ctCrisis instance that has been sent to TheActor.

6.1.1.12 testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisisHandler

The `testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisisHandler` has the following properties:

TEST STEP	
<i>ts12oeSetCrisisHandler</i>	
cf. actor documentation	
Test Sent Message	
TSM 1	out:TheActor sends to system actCoordinator.outactCoordinator.oeSetCrisisHandler (<code>AdtCrisisID</code>)
Variables	
V 1	TheActor:icrash.environment.actCoordinator cf. actor documentation
V 2	TheComCompany:icrash.environment.actComCompany cf. actor documentation
V 3	TheCoordinator:icrash.environment.actCoordinator cf. actor documentation
V 4	AdtCrisisID:icrash.concepts.primarytypes.datatypes.dtCrisisID cf. actor documentation
V 5	AMessage:lu.uni.lassy.messir.libraries.primitives.ptString cf. actor documentation
V 6	AdtPhoneNumber:icrash.concepts.primarytypes.datatypes.dtPhoneNumber cf. actor documentation
V 7	AdtSMS:icrash.concepts.secondarytypes.datatypes.dtSMS cf. actor documentation
V 8	ActAlert:icrash.concepts.primarytypes.classes.ctAlert cf. actor documentation
Constraints	
C 1	TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value
C 2	AdtCrisisID as a value of 1
C 3	AMessage is the string 'You are now considered as handling the crisis !'

continues in next page ...

... Test Step table continuation

C 4	AdtPhoneNumber
C 5	AdtSMS has for value the string 'The handling of your alert by our services is in progress !'
Oracle Constraints	
OC 1	there is a communication company actor that received the message ieSmsSend(AdtPhoneNumber,AdtSMS)
OC 2	there is a coordinator actor that received an alert using the message ieSendAnAlert(ActAlert)

6.1.1.13 testcase01-ts13oeSetClock04-actActivator.outactActivator.oeSetClock

The `testcase01-ts13oeSetClock04-actActivator.outactActivator.oeSetClock` has the following properties:

TEST STEP	
<i>ts13oeSetClock04</i>	
cf. actor documentation	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actActivator.outactActivator.oeSetClock (ACurrentClock)</p>
<i>Variables</i>	
V 1	TheActor:icrash.environment.actActivator cf. actor documentation
V 2	ACurrentClock:lu.uni.lassy.messir.libraries.calendar.dtDateAndTime cf. actor documentation
<i>Constraints</i>	
C 1	TheActor
C 2	ACurrentClock

6.1.1.14 testcase01-ts14oeValidateAlert-actCoordinator.outactCoordinator.oeValidateAlert

The `testcase01-ts14oeValidateAlert-actCoordinator.outactCoordinator.oeValidateAlert` has the following properties:

TEST STEP	
<i>ts14oeValidateAlert</i>	
cf. actor documentation	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actCoordinator.outactCoordinator.oeValidateAlert (AdtAlertID)</p>
<i>Variables</i>	

continues in next page ...

... Test Step table continuation

V 1	TheActor:icrash.environment.actCoordinator cf. actor documentation
V 2	AdtAlertID:icrash.concepts.primarytypes.datatypes.dtAlertID cf. actor documentation
V 3	AMessage:lu.uni.lassy.messir.libraries.primitives.ptString cf. actor documentation
<i>Constraints</i>	
C 1	TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value
C 2	AdtAlertID
C 3	AMessage
<i>Oracle Constraints</i>	
OC 1	

6.1.1.15 testcase01-ts15oeAlert2-actComCompany.outactComCompany.oeAlert

The `testcase01-ts15oeAlert2-actComCompany.outactComCompany.oeAlert` has the following properties:

TEST STEP	
<i>ts15oeAlert2</i>	
cf. actor documentation	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actComCompany.outactComCompany.oeAlert (AetHumanKind, AdtDate, AdtTime, AdtPhoneNumber, AdtGPSLocation, AdtComment)</p>
<i>Variables</i>	
V 1	TheActor:icrash.environment.actComCompany cf. actor documentation
V 2	AetHumanKind:icrash.concepts.primarytypes.datatypes.etHumanKind cf. actor documentation
V 3	AdtDate:lu.uni.lassy.messir.libraries.calendar.dtDate cf. actor documentation
V 4	AdtTime:lu.uni.lassy.messir.libraries.calendar.dtTime cf. actor documentation
V 5	AdtPhoneNumber:icrash.concepts.primarytypes.datatypes.dtPhoneNumber cf. actor documentation
V 6	AdtGPSLocation:icrash.concepts.primarytypes.datatypes.dtGPSLocation cf. actor documentation
V 7	AdtComment:icrash.concepts.primarytypes.datatypes.dtComment cf. actor documentation
V 8	AdtSMS:icrash.concepts.secondarytypes.datatypes.dtSMS cf. actor documentation

continues in next page ...

... Test Step table continuation

<i>Constraints</i>	
C 1	TheActor
C 2	AetHumanKind
C 3	AdtDate
C 4	AdtTime
C 5	AdtPhoneNumber
C 6	AdtGPSLocation
C 7	AdtComment
C 8	AdtSMS
<i>Oracle Constraints</i>	
OC 1	

6.1.1.16 testcase01-ts16oeSetClock05-actActivator.outactActivator.oeSetClock

The `testcase01-ts16oeSetClock05-actActivator.outactActivator.oeSetClock` has the following properties:

TEST STEP	
<i>ts16oeSetClock05</i>	
cf. actor documentation	
<i>Test Sent Message</i>	
TSM 1	<p>out:TheActor</p> <p>sends to system</p> <p>actActivator.outactActivator.oeSetClock (ACurrentClock)</p>
<i>Variables</i>	
V 1	TheActor:icrash.environment.actActivator
V 2	cf. actor documentation
	ACurrentClock:lu.uni.lassy.messir.libraries.calendar.dtDateAndTime
	cf. actor documentation
<i>Constraints</i>	
C 1	TheActor
C 2	ACurrentClock

6.1.1.17 testcase01-ts17oeSetCrisisStatus-actCoordinator.outactCoordinator.oeSetCrisisStatus

The `testcase01-ts17oeSetCrisisStatus-actCoordinator.outactCoordinator.oeSetCrisisStatus` has the following properties:

TEST STEP	
<i>ts17oeSetCrisisStatus</i>	
cf. actor documentation	
<i>Test Sent Message</i>	

continues in next page ...

... Test Step table continuation

Chapter 7

Additional Constraints

7.1 Quality Constraints

Description of all the constraints that concern the required quality criteria according to their ISO definition [?].

7.1.1 Functional suitability

Constraints on the degree to which the product provides functions that meet stated and implied needs when the product is used under specified conditions.

7.1.1.1 Functional completeness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.2 Functional correctness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

7.1.1.3 Functional appropriateness

List of requirements on the degree to which the functions facilitate the accomplishment of specified tasks and objectives.

1. (to be filled)

7.1.2 Performance efficiency

Constraints on the performance relative to the amount of resources used under stated conditions

7.1.2.1 Time behaviour

List of requirements on the degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.2 Resource utilization

List of requirements on the degree to which the amounts and types of resources used by a product or system, when performing its functions, meet requirements.

1. (to be filled)

7.1.2.3 Capacity

List of requirements on the degree to which the maximum limits of a product or system parameter meet requirements.

1. (to be filled)

7.1.3 Compatibility

Constraints on the degree to which a product, system or component can exchange information with other products, systems or components, and/or perform its required functions, while sharing the same hardware or software environment.

7.1.3.1 Co-existence

List of requirements on the degree to which a product can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.

1. (to be filled)

7.1.3.2 Interoperability

List of requirements on the degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.

1. (to be filled)

7.1.4 Usability

Constraints on the usability degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

7.1.4.1 Appropriateness recognizability

List of requirements on the degree to which users can recognize whether a product or system is appropriate for their needs.

1. (to be filled)

7.1.4.2 Learnability

List of requirements on the degree to which a product or system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.

1. (to be filled)

7.1.4.3 Operability

List of requirements on the degree to which a product or system has attributes that make it easy to operate and control.

1. (to be filled)

7.1.4.4 User error protection

List of requirements on the degree to which a system protects users against making errors.

1. (to be filled)

7.1.4.5 User interface aesthetics

List of requirements on the degree to which a user interface enables pleasing and satisfying interaction for the user.

1. (to be filled)

7.1.4.6 Accessibility

List of requirements on the degree to which a product or system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.

1. (to be filled)

7.1.5 Reliability

Constraints on the degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

7.1.5.1 Maturity

List of requirements on the degree to which a system, product or component meets needs for reliability under normal operation.

1. (to be filled)

7.1.5.2 Availability

List of requirements on the degree to which a system, product or component is operational and accessible when required for use.

1. (to be filled)

7.1.5.3 Fault tolerance

List of requirements on the degree to which a system, product or component operates as intended despite the presence of hardware or software faults.

1. (to be filled)

7.1.5.4 Recoverability

List of requirements on the degree to which, in the event of an interruption or a failure, a product or system can recover the data directly affected and re-establish the desired state of the system.

1. (to be filled)

7.1.6 Security

Constraints on the degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

7.1.6.1 Confidentiality

List of requirements on the degree to which a product or system ensures that data are accessible only to those authorized to have access.

1. (to be filled)

7.1.6.2 Integrity

List of requirements on the degree to which a system, product or component prevents unauthorized access to, or modification of, computer programs or data.

1. (to be filled)

7.1.6.3 Non-repudiation

List of requirements on the degree to which actions or events can be proven to have taken place, so that the events or actions cannot be repudiated later.

1. (to be filled)

7.1.6.4 Accountability

List of requirements on the degree to which the actions of an entity can be traced uniquely to the entity.

1. (to be filled)

7.1.6.5 Authenticity

List of requirements on the degree to which the identity of a subject or resource can be proved to be the one claimed.

1. (to be filled)

7.1.7 Maintainability

Constraints on the degree of effectiveness and efficiency with which a product or system can be modified by the intended maintainers.

7.1.7.1 Modularity

List of requirements on the degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.

1. (to be filled)

7.1.7.2 Reusability

List of requirements on the degree to which an asset can be used in more than one system, or in building other assets.

1. (to be filled)

7.1.7.3 Analysability

List of requirements on the degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.

1. (to be filled)

7.1.7.4 Modifiability

List of requirements on the degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.

1. (to be filled)

7.1.7.5 Testability

List of requirements on the degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.

1. (to be filled)

7.1.8 Portability

Constraints on the degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

7.1.8.1 Adaptability

List of requirements on the degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.

1. (to be filled)

7.1.8.2 Installability

List of requirements on the degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.

1. (to be filled)

7.1.8.3 Replaceability

List of requirements on the degree to which a product can replace another specified software product for the same purpose in the same environment.

1. (to be filled)

7.2 Other Constraints

Any other unclassified constraints judged as required for the product under development.

B.1 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the **Messir** method and inspired by the standard Cokburn template [?].

B.1.1 Use Cases

B.1.1.1 subfunction-oeCloseCrisis

the actCoordinator's goal is to declare a crisis as closed.

USE-CASE DESCRIPTION	
Name	oeCloseCrisis
Scope	system
Level	subfunction
<i>Primary actor(s)</i>	
1	actCoordinator[active]
<i>Goal(s) description</i>	
the actCoordinator's goal is to declare a crisis as closed.	
<i>Protocol condition(s)</i>	
1	the iCrash system has been deployed.
<i>Pre-condition(s)</i>	
1	none
<i>Main post-condition(s)</i>	
1	the crisis is known by the system to be closed.
2	a message ieMessage(AMessage) is sent to the actCoordinator to inform him that his crisis is now considered as closed.

Figure B.1 shows the use case diagram for the oeCloseCrisis subfunction use case

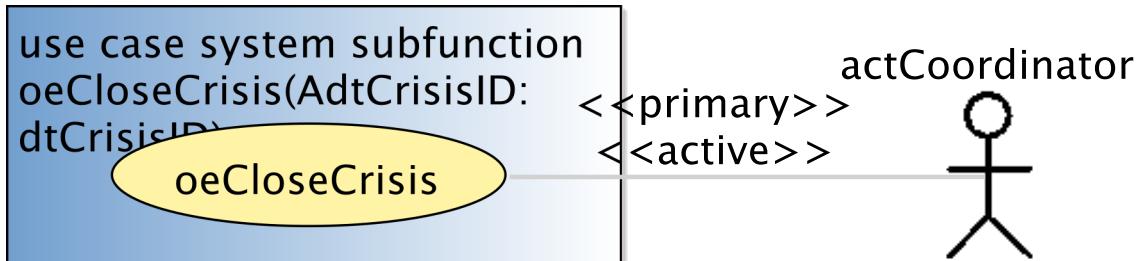

Figure B.1: oeCloseCrisis subfunction use case

Glossary

<i>abstract actor</i> an actor that is not	22
<i>actor</i> An actor is a person, organization, or external system that plays a role in one or more interactions with the system	18
<i>direct actor</i> an actor that interacts directly with the system. It thus belongs to the environment.	22
<i>indirect actor</i> an actor that interacts indirectly with the system through a direct actor. It thus belongs the domain but not to the environment.	22
<i>system operation</i> a functionality of the system that can be triggered by a message sent by an actor belonging to the environment.	18
